12.	**ANNEXURE-P/7A** A copy of the Eastern Railway's Letter No L/Lease License/19 Dated 09.04.2019 regarding renewal of land license and consequential fees.	**1081**
13.	**ANNEXURE-P/7B (COLLY).** A copy of the Lease Agreement dated 14.05.2010 alongwith copy of DVC bill of Rs. 324.07 lakh dated 29.10.2021.	**1082-1101**
14.	**ANNEXURE-P/7C** A copy of DVC bill of Rs. 220.55 lakh dated 11.09.2023.	**1102-1107**

15.	**ANNEXURE-P/8A (COLLY.).** A copy of the Letters dated 22.09.2020, 30.11.2020 and 18.12.2020 written by the Petitioner to local administration for providing support for carrying out the construction work.	**1108-1110**
16.	**ANNEXURE-P/8B (COLLY.).** True copies of the Orders dated 13.08.2020, 09.02.2021 and 30.03.2021 issued by MNRE.	**1111-1114**
17.	**ANNEXURE-P/8C** A true copy of the Report of ISM.	**1115-1120**
18.	**ANNEXURE-P/8D** A true copy of the Petitioner's letter dated 02.03.2021 to the Senior Divisional Commercial Manager, Eastern Railway.	**1121**
19.	**ANNEXURE-P/8E (COLLY).** True copies of the Orders dated 12.05.2021, 29.06.2021 and 15.09.2021 issued by MNRE.	**1122-1126**
20.	**ANNEXURE-P/8F** A true copy of Letter dated 10.05.2021 issued by Commissioner of Railway Safety, Eastern Circle.	**1127-1128**
21.	**ANNEXURE-P/8G** A true copy of Certificate dated 04.06.2021 for Track Fitness of Private Railway Siding under Asansol Division to serve the Generating Station.	**1129**
22.	**ANNEXURE-P/8H** A true copy of Eastern Railway sanction dated 18.08.2021.	**1130**
23.	**ANNEXURE-P/8I** A true copy of EIG sanction dated 31.08.2021.	**1131**
24.	**ANNEXURE-P/8J** A true copy of EIG sanction dated 31.08.2021.	**1132-1133**
25.	**ANNEXURE-P/8K (COLLY.).** A true copy of Joint Note for Engine Trial/OHE.	**1134-1137**
26.	**ANNEXURE-P/8L** A true copy of joint Compliance Report dated 18.09.2021.	**1138**

27.	**ANNEXURE-P/8M** A true copy of letter dated 06.10.2021.	**1139**
28.	**ANNEXURE-P/8N** A true copy of Letter dated 11.10.2021.	**1140**
29.	**ANNEXURE-P/8O** A true copy of Joint note dated 23.11.2021.	**1141**
30.	**ANNEXURE-P/8P** A true copy of provisional opening of Siding Notification dated 08.03.2022.	**1142**
31.	**ANNEXURE-P/8Q** A true copy of receipt confirmation letter dated 14.03.2022.	**1143**
32.	**ANNEXURE-P/8R** A true copy of the MoM dated 26.11.2021 issued for the meeting dated 24.11.2021.	**1144-1145**
33.	**ANNEXURE-P/8S** A true copy of the letter dated 26.11.2021 issued by Petitioner to Eastern Railway.	**1146-1150**
34.	**ANNEXURE-P/8T** A true copy of the Letter dated 03.12.2021 issued by DRM, Eastern Railway, Asansol.	**1151-1153**
35.	**ANNEXURE-P/8U** A true copy of GCT Policy 2021.	**1154-1229**
36.	**ANNEXURE-P/8V** A true copy of the Letter dated 05.01.2022 issued by Railway Board.	**1230**
37.	**ANNEXURE-P/W (COLLY.).** A true copy of Letter dated 25.01.2022 issued by Chief Transmission Planning Manager, Eastern Railway and GCT Policy 2021.	**1231-1275**
38.	**ANNEXURE-P/8X** A true copy of Letter dated 27.01.2022 written by the Petitioner to DRM, Eastern Railway, Asansol.	**1276**
39.	**ANNEXURE-P/8Y** A true copy of Letter dated 27.01.2022 written by DRM to the Petitioner.	**1277**

40.	**ANNEXURE-P/8Z** A true copy of Letter dated 28.01.2022 issued by the Petitioner to DRM, Eastern Railway.	**1278-1279**
41.	**ANNEXURE-P/8AA** A true copy of the Letter dated 28.01.2022 issued by the Petitioner.	**1280-1282**
42.	**ANNEXURE-P/8AB (COLLY.).** A true copy of Undertaking and MoA dated 16.02.2022.	**1283-1300**
43.	**ANNEXURE-P/8AC (COLLY.)** A true copy of Circular/Commercial Notification dated 22.02.2022 and FOIS message dated 22.02.2022.	**1301-1303**
44.	**ANNEXURE-P/8AD** A true copy of Circular dated 07.03.2022 issued by Railway Board.	**1304**
45.	**ANNEXURE-P/8AE** A true copy of Circular dated 08.03.2022 issued by Eastern Railway.	**1305**
46.	**ANNEXURE-P/8AF** A true copy of Letter dated 14.03.2022 issued by the Petitioner to Divisional Railway.	**1306**
47.	**ANNEXURE-P/8AG** A true copy of the Model Agreement issued by Railway Board on 07.07.2022.	**1307-1350**
48.	**ANNEXURE-P/8AH** A true copy of letter dated 04.08.2022 issued by Senior Divisional Commercial Manager, Eastern Railway.	**1351**
49.	**ANNEXURE-P/8AI** A copy of the summary of Capital Cost for Railway Project and corresponding Annual Fixed Charges under both the Scenarios.	**1352-1354**
50.	**ANNEXURE-P/9 (COLLY.).** True copies of the OEM letters dated 09.09.2019, 11.12.2020, 15.12.2020 and 09.07.2022 certifying the end of life/ obsolescence of the batteries.	**1355-1360**
51.	**ANNEXURE-P/10A** A true copy of Certificate of Obsolescence dated 05.09.2019 from the OEM for the CHP PLC upgradation.	**1361-1363**

52.	**ANNEXURE-P/10B** A true copy of the Compatibility Certificate dated 15.12.2021 for the Stacker Reclaimer PLC upgradation.	**1364**
53.	**ANNEXURE-P/11** A true copy of the Letter of obsolescence from OEM.	**1365-1366**
54.	**ANNEXURE-P/12A** A copy of the latest email communication dated 08.06.2022 from the supplier regarding the delivery delay.	**1367-1369**
55.	**ANNEXURE-P/12B** Supporting document to demonstrate the obsolescence or unavailability of spare parts and service support of screw compressors.	**1370**
56.	**ANNEXURE-P/13** A copy of the OEM recommendations dated 10.01.2022 as per the directions of Hon'ble Commission.	**1371**
57.	**ANNEXURE-P/14A** A copy of the said Obsolescence Certificate dated 10.06.2022 from the OEM.	**1372**
58.	**ANNEXURE-P/14B (COLLY.).** Copies of communications from the supplier regarding delivery challenges.	**1373-1376**
59.	**ANNEXURE-P/14C (COLLY.).** Copies of MoM dated 27.10.2022 and CEA direction on meeting dated 07.11.2023.	**1377-1381**
60.	**ANNEXURE-P/15** A copy of Notification dated 18.11.2009 relating to AAQI standard requirement issued by CPCB.	**1382-1383**
61.	**ANNEXURE-P/16** A copy of OEM's recommendation dated 13.06.2018.	**1384**
62.	**ANNEXURE-P/17** A copy of the Cyber Security in Power Sector Guidelines, 2021 issued by CEA.	**1385-1408**
63.	**ANNEXURE-P/18** A true copy of the obsolescence certificate dated 12.05.2021 pertaining to HMI.	**1409**

64.	**ANNEXURE-P/19** A copy of the obsolescence certificate dated 12.05.2021 from OEM.	**1410**
65.	**ANNEXURE-P/20A** A copy of the Central Ground Water Authority (CGWA) Norms dated 24.09.2020.	**1411-1412**
66.	**ANNEXURE-P/20B (COLLY.)** Copies of various correspondences exchanged with DVC regarding water supply.	**1413-1423**
67.	**ANNEXURE-P/20C** A true copy of the Agreement dated 15.05.2023 executed between Petitioner and DVC.	**1424-1445**
68.	**ANNEXURE-P/21** A copy of National Water Policy 2012 (relevant pages).	**1446-1447**
69.	**ANNEXURE-P/22A** A true copy of the MoM dated 11-12.11.2016 of meeting with BHEL.	**1448-1450**
70.	**ANNEXURE-P/22B** A true copy of MOM dated 13-14.06.2018 of meeting with BHEL.	**1451-1452**
71.	**ANNEXURE-P/23A** A copy of data on leakage and outage days.	**1453-1456**
72.	**ANNEXURE-P/23B** A true copy of the Report of Safety Audit dated 16-19.03.2021 conducted by National Safety Council.	**1457-1558**
73.	**ANNEXURE-P/24** A true copy of the obsolescence certificate dated 06.05.2022.	**1559**
74.	**ANNEXURE-P/25 (COLLY.).** A copy of the Lists of replaced switches at Petitioner's Plant and Notice of End of Sale and End of Life Announcement (for switches of four different series to be replaced) from the manufacturer.	**1560-1651**
75.	**ANNEXURE-P/26** A copy of the Letter dated 09.12.2019 of recommendation by OEM, M/S Shinkawa.	**1652**

76.	**ANNEXURE-P/27 (COLLY.).** A copy of the Guidelines for in-use Generator sets (Noise and Emission) issued by CPCB and a copy of Hon'ble National Green Tribunal's Order dated 11.03.2015.	**1653-1661**
77.	**ANNEXURE-P/28 (COLLY.).** A true copy of the relevant pages of the Notifications dated 06.03.2020 and 20.04.2020 issued by the Ministry of Transport and Highways along with Order dated 27.03.2020 passed by the Hon'ble Supreme Court.	**1662-1667**
78.	**ANNEXURE-P/29** A true copy of the IS Code 3034.	**1668-1685**
79.	**ANNEXURE-P/30** A copy of the Letter dated 30.03.2021 from CIF.	**1686**
80.	**ANNEXURE-P/31A** A copy of the Letter dated 24.01.2024 issued by the Chief Inspector of Factories.	**1687**
81.	**ANNEXURE-P/31B** A copy of Report of Safety Audit dated 14th – 15th June, 2024.	**1688-1748**
82.	**ANNEXURE-P/31C** A copy of the said directions dated 16.01.2021 issued by the Office of Chief Inspector.	**1749**
83.	**ANNEXURE-P/31D** A copy of recommendation letter dated 13.09.2022 issued by the Government approved third party agency.	**1750**
84.	**ANNEXURE-P/32** A copy of the Letter dated 14.02.2018 issued by POSOCO.	**1751**
85.	**ANNEXURE-P/33** A copy of the Auditor's Certificate certifying the details of decapitalization of Property, Plant & Equipment (PPE) during financial years 2019-20 to 2023-24 for the Petitioner Generating Station.	**1752-1763**
86.	**ANNEXURE-P/34 (COLLY.)** A copy of the Auditor's Certificate certifying the scheme wise closing UDL for the years 2019-20 to 2023-24 for the Petitioner's Generating Station.	**1764-1773**

87.	**ANNEXURE-P/35A (COLLY.).** A copy of the Auditor certificates certifying the quarterly Capital Work in Progress and Capital Advances for the period FY 2019-20 to FY 2023-24 for Capex Schemes with segregated closing balances for Railway System, FGD, Schemes other Railway Package etc.	**1774-1782**
88.	**ANNEXURE-P/35B** A copy of the Computation of Normative IDC for Capex Schemes (excluding Railway).	**1783**
89.	**ANNEXURE-P/36A (COLLY.).** Auditor certificates certifying quarterly Capital Works in Progress and Undischarged liabilities for the period since inception to March'22 for Railway Package.	**1784-1787**
90.	**ANNEXURE-P/36B** Computation of Normative IDC for Railway System.	**1788**
91.	**ANNEXURE-P/37A** A copy of the Auditor's Certificate certifying the loan movement with interest for the years 2019-20 to 2023-24 for the Petitioner's Generating Station.	**1789-1792**
92.	**ANNEXURE-P/37B (COLLY.).** Copies of the supporting documents of the cost of refinancing of Rs. 429.18 Lakh.	**1793-1798**
93.	**ANNEXURE-P/38** A copy of the Certificate from Statutory Auditors dated 12.12.2024 regarding Gross Block of the Assets as per depreciation schedule in Tariff Regulations 2019 for financial years of the Tariff Period 2019-24.	**1799-1803**
94.	**ANNEXURE-P/39A (COLLY.).** A true copy of the Letters dated 01.06.2017, 25.05.2017, 10.04.2017 and 26.09.2019.	**1804-1816**
95.	**ANNEXURE-P/39B** A true copy of the Report dated 09.10.2024 on performance test of boiler (Report No. CPRI/ERED/EA/225/24) conducted by Central Power Research Institute (CPRI).	**1817-1837**
96.	**ANNEXURE-P/39C (COLLY.).** A copy of the Letters dated 17.03.2023 issued by the Petitioner to beneficiaries respectively for seeking consent of the beneficiaries.	**1838-1843**

97.	**ANNEXURE-P/39D (COLLY.).** A copy of the Replies received from beneficiaries denying the consent for procurement of the imported coal.	**1844-1848**
98.	**ANNEXURE-P/39E** A copy of the table showing such difference/comparison of approved SHR between various thermal generating stations.	**1849**
99.	**ANNEXURE-P/40A** A copy of correspondences exchanged with DVC regarding raw water charges.	**1850-1854**
100.	**ANNEXURE-P/40B** A copy of the Auditor Certificate for O&M Expenses covering water charges, security expenses and Ash Disposal Expenses.	**1855-1858**
101.	**ANNEXURE-P/41A (COLLY.).** Copies of all the communications regarding the issue of disposal of ash.	**1859-1866**
102.	**ANNEXURE-P/41B (COLLY.).** Sample copy of Advertisements published in newspapers seeking for the interested bidders regarding.	**1867-1870**
103.	**ANNEXURE-P/42** A copy of the Email dated 06.05.2022 issued by OEM.	**1871-1873**
104.	**ANNEXURE-P/43** A copy of the correspondences exchanged between BHEL and the Petitioner regarding Turbine Bearing set.	**1874-1877**
105.	**ANNEXURE-P/44A (COLLY.).** A list of equipment along with available Certificate of Obsolescence issued by OEM in respect of Chemical Laboratory instruments.	**1878-1879**
106.	**ANNEXURE-P/44B** A copy of the list of calibration equipment.	**1880-1881**
107.	**ANNEXURE-P/45** A copy of the quotation given by the new supplier (Krishna Belt Pvt Ltd.).	**1882-1883**

108.	**ANNEXURE-P/46** A copy of the Report issued by the Exide Industries Limited dated 20.04.2023.	**1884-1885**
109.	**ANNEXURE-P/47** A copy of BHEL's Instruction Manual for O&M of Indoor Vacuum Switch Gear (relevant pages) showing life expectancy of 20000 switching operations.	**1886**
110.	**ANNEXURE-P/48** A copy of the GE Manual (relevant pages).	**1887**
111.	**ANNEXURE-P/49** copies of the Emails exchanged with OEM in respect of testing equipment for electrical equipment.	**1888-1890**
112.	**ANNEXURE-P/50** A copy of the IS 2190:2010 standard specifying life of CO2 extinguisher as 25 years (relevant pages).	**1891**
113.	**ANNEXURE-P/51** a copy of the CISCO's Obsolescence Notice of existing CISCO network switches.	**1892-1895**
114.	**ANNEXURE-P/52** A copy of the CEA Guideline 2021 (relevant pages) along with Grant Thornton's Audit Report dated 24.02.2023.	**1896-1902**
115.	**ANNEXURE-P/53A** A copy of the OEM letter dated 23.05.2022 on obsolescence of software.	**1903**
116.	**ANNEXURE-P/53B** A copy of Email Communication dated 01.03.2024 for obsolescence of Hardware.	**1904-1906**
117.	**ANNEXURE-P/54 (COLLY.)** Copies of the End of Sale Announcement/ Discontinuation/ Obsolescence documents of AP-10 and RV-100 services hardware/software.	**1907-1908**
118.	**ANNEXURE-P/55 (COLLY.)** Copies of the Obsolescence Letter dated 12.05.2021 and obsolescence letter dated 01.01.2024 issued by the respective OEM.	**1909-1910**
119.	**ANNEXURE-P/56** A copy of the OEM Letter dated 15.04.2024.	**1911**

120.	**ANNEXURE-P/57** A copy of the Heroin and Norgren (OEM) Recommendation dated 10.08.2022.	**1912**
121.	**ANNEXURE-P/58A** A copy of Recommendation Letter for obsolescence and upgradation of HMI-Max Stations dated 23.05.2022.	**1913**
122.	**ANNEXURE-P/58B** Copy of audit report conducted for Unit 1 dated 24.01.2023 and for Unit 2 dated 01.08.2023.	**1914-1920**
123.	**ANNEXURE-P/59** A copy of E-Mail communication dated 06.05.2022 regarding SCADA.	**1921**
124.	**ANNEXURE-P/60A** Copies of relevant Communication.	**1922-1923**
125.	**ANNEXURE-P/60B** A copy of the Minutes of 862nd Meeting of Sub-Group (IPPs) constituted by Infrastructure Constraints Review Committee dated 25.10.2024.	**1924-1929**
126.	**ANNEXURE-P/60C** A copy of MoP's Policy for Biomass Utilisation for Power Generation through Co-firing in Coal based Power Plants.	**1930-1932**

MAITHON POWER LIMITED

BEFORE THE HON'BLE CENTRAL ELECTRICITY REGULATORY COMMISSION

AT NEW DELHI

PETITION NO. _____/GT/2025

IN THE MATTER OF: *Petition filed under Sections 62 and 79 of the Electricity Act, 2003, read with Regulation 15(a) of the Central Electricity Regulatory Commission (Conduct of Business) Regulations, 2023 seeking:*

1. ***Truing up** of the generation tariff for the period FY 2019-20 to FY 2023-24 under Regulation 13 of the CERC (Terms and Conditions of Tariff) Regulations, 2019 and Regulation 12 of CERC (Terms and Conditions of Tariff) Regulations, 2024 for 2x525 MW Maithon Right Bank Thermal Power Project (MRBTPP) operated by Maithon Power Limited (MPL).*
2. ***Determination** of the generation tariff for the period FY 2024-25 to FY 2028-29, under Regulation 10 of CERC (Terms and Conditions of Tariff) Regulations, 2024 for 2x525 MW Maithon Right Bank Thermal Power Project (MRBTPP) operated by Maithon Power Limited (MPL).*

AND

IN THE MATTER OF:

Maithon Power Limited ...Petitioner

Versus

Tata Power Delhi Distribution Limited & Ors. ...Respondents

PETITION ON BEHALF OF MAITHON POWER LIMITED FOR TRUING UP OF TARIFF FOR THE PERIOD 01.04.2019 TO 31.03.2024 AND DETERMINATION OF TARIFF FOR MAITHON RIGHT BANK THERMAL POWER PROJECT FOR THE PERIOD 01.04.2024 TO 31.03.2029.

A. EXECUTIVE SUMMARY OF THE PETITION

A.I. BRIEF BACKGROUND OF THE PETITIONER

1. Maithon Power Limited ("**MPL**"/"**Petitioner**"), a Generating Company within the meaning of Section 2(28) of the Electricity Act, 2003 ("**Act**"), is a 74%-26% joint

venture between the Tata Power Company Ltd. ("**Tata Power**") and Damodar Valley Corporation ("**DVC**"/"**Respondent No.2**"). The Petitioner has set up and operates the Maithon Right Bank Thermal Power Project in Jharkhand ("**MRBTPP**" or "**Station**" or "**Project**") with an installed capacity of 1050 MW (2x525 MW).

A.II. BRIEF BACKGROUND OF THE RESPONDENTS

2. The Respondents are the beneficiaries of the Petitioner. Notably, the Petitioner had executed a long-term Power Purchase Agreements ("**PPA**") with DVC and Kerala State Electricity Board Limited (**"KSEBL"/ "Respondent No.4"**), for supply of 300 MW and 150 MW, respectively. Subsequently, DVC's share of 300 MW was revised to 150 MW following surrender of 150 MW by DVC and KSEBL share was revised to 300 MW from 150 MW consequent to fresh tie-up of the surrendered quantum with KSEBL.

3. The remaining 600 MW capacity has been tied up with the Tata Power Trading Company Ltd. (**"TPTCL"/ "Respondent No.5"**) which in turn has entered into a back to back arrangement through Power Sale Agreement ("**PSA**") with Tata Power Delhi Distribution Ltd (**"TPDDL"/ "Respondent No.1"– formerly known as NDPL**) and West Bengal State Electricity Distribution Company Ltd. (**"WBSEDCL"/ "Respondent No.3"**), for 300 MW capacity each. As on date, the long-term Power Sale arrangement for the station is as shown below:

(a) 150 MW with Respondent No. 2, i.e. DVC, vide PPA dated 28.09.2006 read with Supplementary Agreement dated 24.01.2017.

(b) 300 MW with Respondent No. 1, i.e. TPDDL, through Respondent No. 5 i.e. TPTCL vide Tri-partite PPA dated 10.09.2009.

(c) 300 MW with Respondent No. 3, i.e. WBSEDCL, through TPTCL vide PSA

dated 24.12.2008 and Supplementary PSA dated 19.02.2013.

(d) 300 MW with Respondent No. 4, i.e. KSEBL, vide PPAs dated 30.12.2013 and 29.06.2015.

A.III. BRIEF BACKGROUND OF THE MATTER

RE: GENERATING STATION/UNIT, TRANSMISSION LINE /ASSET AS THE CASE MAY BE

4. MRBTPP, conceived in 1998, originally intended as a collaboration between DVC and BSES, saw the incorporation of the Petitioner in 2000 under the Companies Act, 1956. Environmental clearance was obtained in 2004 from the Ministry of Environment & Forests. However, the envisaged joint venture with BSES failed to materialize. In 2005, discussions commenced between Tata Power and DVC for a joint venture, subsequently approved by the Ministry of Power. The Shareholders Agreement ("**SHA**") was executed in 2005, with Tata Power holding 74% equity and DVC holding 26%. Board approval was granted in 2007, marking the Project's Zero Date. Unit 1 achieved Commercial Operation Date ("**COD**") in 2011, followed by Unit 2 in 2012.

5. The Petitioner entered into long-term Power Purchase Agreements ("**PPAs**") with DVC and Kerala State Electricity Board Ltd. (KSEBL) for 300 MW and 150 MW, respectively. DVC's allocation was reduced to 150 MW following a surrender of 150 MW, while KSEBL's allocation was increased to 300 MW through a revised agreement. The remaining 600 MW capacity was contracted with Tata Power Trading Company Ltd. (TPTCL), which facilitated Power Sale Agreements (PSAs) with Tata Power Delhi Distribution Ltd. (TPDDL) and West Bengal State Electricity Distribution Company Ltd. (WBSEDCL), allocating 300 MW each.

6. The Hon'ble Commission has notified the Central Electricity Regulatory

Commission (Terms & Conditions of Tariff) Regulations, 2019 (hereinafter '**Tariff Regulations 2019**') which came into force from 1.4.2019, specifying the terms & conditions and methodology of True-up of Tariff for the period 01.04.2019 to 31.03.2024 and also the Central Electricity Regulatory Commission (Terms & Conditions of Tariff) Regulations, 2024 (hereinafter '**Tariff Regulations 2024**') which came into force from 01.04.2024, specifying the Terms & conditions and methodology of determination of Tariff for the period 01.04.2024 to 31.03.2029.

A.IV. BRIEF DESCRIPTION OF IMPORTANT EVENTS RELEVANT TO THE PETITION

Re. Filings under Tariff Period 2009-14:

7. On 22.10.2010, the Petition No. 274/2010 was filed by the Petitioner for the approval of the Capital Cost and the Generation Tariff for the power sold from 525 MW Unit 1 of Project to DVC for the period commencing from the anticipated revised COD of 15.06.2011.

8. On 19.11.2014, this Hon'ble Commission after following due legal and regulatory process has issued the Tariff Order from the respective COD of the Generating Units till 31.03.2014 on 19.11.2014. The Hon'ble Commission through the Order allowed the Capital Cost for Unit 1 at Rs. 244839.00 lakh and for Unit 2 at Rs. 137002.00 lakh as on the respective COD of the Units and Rs. 517025.00 lakh for the Generating Station, including Unit 1 and Unit 2, as on 31.03.2014.

9. It is further submitted that the Petitioner had challenged the Order passed by the Hon'ble Commission dated 19.11.2014 before the Hon'ble Appellate Tribunal for Electricity ("**Hon'ble Tribunal**") in Appeal No. 48 of 2015 on the following issues arising out of the same, viz.

   (a) Disallowance of Interest during Construction ("**IDC**") while refusing to condone the delay on account of the handover of Raiyati Land and Non-

availability of Construction Power which are beyond the control of the Petitioner;

(b) Disallowance of the cost of Light Diesel Oil ("**LDO**") which has been used in addition to the Heavy Fuel Oil ("**HFO**") as Secondary Fuel Oil for start-up and shutdown of the Units post the declaration of the Commercial Operation of Unit 2.

10. The Hon'ble Tribunal disposed of the Appeal on 10.05.2016 upholding the findings of the Hon'ble Commission in Order dated 19.11.2014. Aggrieved by the judgment of the Hon'ble Tribunal, the Petitioner has filed a Civil Appeal having No. 9208 of 2016 before the Hon'ble Supreme Court of India on 05.09.2016 which is currently sub-judice.

Re. Filings under Tariff Period 2014-19

11. On 01.06.2015, the Petitioner filed Petition No. 152/GT/2015 for the truing-up of Tariff for the Tariff Period 2011-14 and determination of Tariff for the Tariff Period 2014-19.

12. On 26.12.2017, this Hon'ble Commission passed its Order in Petition No. 152/GT/2015, allowing the Capital Cost for the Generating Station at Rs. 416490.69 lakh as on 31.03.2014. The Hon'ble Commission further allowed Projected additional capitalisation of Rs. 25958.00 lakh and Rs. 9116.00 lakh during FY 2014-15 and FY 2015-16 respectively, thereby allowing the Capital Cost for the Generating Station at Rs. 451564.69 lakh as on 31.03.2019.

13. On 09.02.2018, the Petitioner filed Review Petition No. 16/RP/2018 before this Hon'ble Commission seeking review of certain claims not considered in the Tariff Order dated 26.12.2017.

14. This Hon'ble Commission disposed of the Review Petition No. 16/RP/2018 vide

MAITHON POWER LIMITED

its Order dated 25.4.2019. Since the issue of Additional interest was not allowed in favour of the Petitioner, the Petitioner has filed Appeal No. 405 of 2019 and the same is still pending for consideration before the Hon'ble Tribunal.

15. On 09.08.2018, the Petitioner filed Petition No. 285/MP/2018 before this Hon'ble Commission furnishing complete details regarding recovery of Liquidated Damages ("**LD**") and its adjustment in books of account and further seeking inclusion of LD deducted from Capital Cost and consequent revision of Trued-up Tariff. This Hon'ble Commission allowed LD amounting to Rs.16000.00 Lakh to be included in the Capital Cost and due to the impact of the same for the period 2011-14 and 2014-19, revised Tariff has been determined by Hon'ble Commission *vide* Order dated 01.10.2019 in Petition No. 152/GT/2015.

16. On 17.05.2019, the Petitioner filed Petition No. 152/MP/2019 for in-principle approval for the installation of Flue Gas Desulfurization (FGD) system to meet new environment norms prescribed by the Ministry of Environment, Forest and Climate Change ("MoEFCC") vide its notification dated 27.12.2015.

17. On 11.11.2019, this Hon'ble Commission disposed of the Petition No. 152/MP/2019.

Re. Filings under Tariff Period 2019-24:

18. The Petitioner had filed Petition No.408/GT/2020 for truing-up of ARR for the Tariff Period 2014-19 and the determination of ARR and Generation Tariff for the Tariff Period 2019-24.

19. On 08.01.2022, this Hon'ble Commission, after following due legal and regulatory process has passed the final Order in Petition No. 408/GT/2020. The Hon'ble Commission, through the Order, allowed the Capital Cost for the Generating Station at Rs. 478969.24 lakh as on 31.03.2019. A copy of the Order dated

08.01.2022 passed in Petition No. 408/GT/2020 is annexed hereto and marked as **ANNEXURE P/1**.

20. The Petitioner filed the Review Petition No. 4/RP/2022 before this Hon'ble Commission seeking review of claims related to the enhancement of security not considered in the Tariff Order dated 08.01.2022.

21. On 13.12.2022, this Hon'ble Commission, after following due legal and regulatory process has passed the final Order in Review Petition No. 4/RP/2022 in Petition No. 408/GT/2020. This Hon'ble Commission, through the Order, allowed expenditure for Gate House near JNT, Boom Barrier, E-security, CCTV Camera, etc. and allowed the Capital Cost for the Generating Station at Rs. 479376.83 lakh as on 31.03.2019. A copy of the Review Order dated 13.12.2022 passed in Petition No. 4/RP/2022 is annexed hereto and marked as **ANNEXURE P/1A**.

22. Further, the Petitioner has also filed an Appeal bearing Appeal No. 12 of 2023 before the Hon'ble Tribunal against the Order dated 08.01.2022 in Petition No. 408/GT/2020 and Review Order dated 13.12.2022 on the following grounds:

(a) Issues involving wrongful disallowance of the following legitimate claims:

i. Operation and Maintenance ("**O&M**") Expenses for Reverse Osmosis ("**RO**") Plant for Tariff Period 2019-24

ii. Rental and Conveyance Expenses in Lieu of 2nd Township for the Tariff Periods 2014-19 and 2019-24

iii. Unrecovered Depreciation on De-Capitalisation for the Tariff Periods 2014 -19 and 2019-24

iv. Additional Tax on Income Due to Adoption of Indian Accounting Standard System ("**Ind AS**") for the Tariff Periods 2014-19 and

2019-24

v. Grossing up of Return on Equity ("**RoE**") for Additional Capitalisation for the Tariff Period 2019-24

vi. Relaxation of Station Heat Rate ("**SHR**") for the Tariff Period 2019-24

vii. Normative Interest During Construction ("**IDC**") on Opening/Closing Capital Work in Progress ("**CWIP**")

viii. Wrongful findings on gain from Refinancing.

(b) Issues involving disallowance of the following Additional Capital Expenditure.

i. IT Equipment for the Tariff Period 2014-19 and 2019-24.

ii. Augmentation of Track Hopper Shed for the Tariff Period 2014-19

iii. Re-Heater Modification & MTM Installation for the Tariff Period 2014-19 and Tariff Period 2019-24

iv. Fabrication of Expansion Bellow for the Tariff Period 2014-19

v. Augmentation of store area for the Tariff Period 2014-19 and 2019-24

vi. Safety related expenditure for the Tariff Period 2014-19 including Cup-lock scaffolding in 2014-19 period, Construction of high-rise maintenance platform, for the Tariff Period 2014-19

vii. Minor items for the Tariff Period 2019-24

23. The Petitioner would like to bring to the kind attention of the Hon'ble Commission that some of the issues mentioned below, which were earlier disallowed and are under consideration before the Hon'ble Tribunal are being claimed in the instant Petition alongwith additional documentation in support of the claim and certain

MAITHON POWER LIMITED

new developments which are discussed in the subsequent paragraphs.

i. Relaxation of Station Heat Rate for Control Period 2019-24

ii. Normative Interest During Construction ("IDC") on Opening/Closing Capital Work in Progress ("CWIP")

iii. Grossing up of Return on Equity for Additional Capitalisation for Control Period 2019-24.

iv. IT Equipment (Infrastructure-IT)

v. Re-Heater Modification & MTM Installation (Re-heater Upgradation)

vi. Fabrication of Expansion Bellow

vii. Augmentation of Store Area (Store Renovation)

viii. Cup-lock scaffolding of 2014-19 period carried forward to 2019-24

ix. Construction of high-rise maintenance platform, for the Tariff Period 2014-19 carried forward to 2019-24

Upon approval of the above claims by Hon'ble Commission, the Petitioner shall withdraw the issues from the pending Appeal before Hon'ble Tribunal.

24. As regards the other issues pending before Hon'ble Tribunal but not being claimed in the instant petition, the Petitioner reserves the right to claim the same for both 2019-24 and 2024-29 period in case the Hon'ble Tribunal passes any further order regarding the reliefs sought.

A.V. SUMMARY OF CLAIMS

25. The actual additional capitalisation, excluding Normative IDC (except Railway project, discharges and decapitalisation) claimed for 2019-24 is summarised below:

MAITHON POWER LIMITED

Table 1: Additional Capitalisation claimed for 2019-24 (Rs. lakh)

B. DETAILED PETITION

B.I. Previous Orders issued having a bearing on the present Petition

RE: APPROVAL OF CAPITAL COST AND DETERMINATION OF GENERATION TARIFF FOR THE FY 2011-12, FY 2012-13 AND FY 2013-14 AND FINAL

MAITHON POWER LIMITED

TARIFF ORDER

30. The Petitioner filed Petition No. 274/2010 for approval of Capital Cost and ARR for the period 2011-14. On 19.11.2014, this Hon'ble Commission after following due legal and regulatory process has issued the Tariff Order from the respective CoDs of the Generating units till 31.03.2014 on 19.11.2014.

31. It is submitted that the Petitioner had challenged the Order passed by the Hon'ble Commission dated 19.11.2014 before the Hon'ble Tribunal in Appeal No. 48 of 2015 on two issues arising out of the same. The Hon'ble Tribunal disposed of the Appeal on 10.05.2016 upholding the findings of the Hon'ble Commission in Order dated 19.11.2014. Aggrieved by the judgment of the Hon'ble Tribunal, the Petitioner has filed a Civil Appeal having No. 9208 of 2016 before Hon'ble Supreme Court of India on 05.09.2016 which is currently sub-judice.

Re. Truing-up of ARR for the period 2011-14 and Determination of ARR and Generation Tariff for the control period 2014-19

32. The Petitioner filed Petition No. 152/GT/2015 for Truing-up of ARR for the period 2011-14 and determination of ARR and Generation Tariff for the Control Period 2014-19. This Hon'ble Commission passed an Order on 26.12.2017.

33. Subsequently, the Petitioner filed a Petition before Hon'ble Commission against Order dated 26.12.2017 vide Review Petition No. 16/RP/2018 dated 09.02.2018 seeking review of certain claims not considered in said Order. This Hon'ble Commission disposed of the Review Petition No. 16/RP/2018 vide its Order dated 25.04.2019. Since, the issue of Additional interest was not allowed in favour of the Petitioner, the Petitioner has filed Appeal No. 405 of 2019 and the same is still pending for consideration.

34. In Petition No. 285/MP/2018 filed on 09.08.2018, this Hon'ble Commission allowed Rs.160 Crore LD to be included in the Capital Cost and due to the impact of the same for the period 2011-14 and 2014-19, revised tariff has been determined vide Order dated 01.10.2019 in Petition No. 152/GT/2015.

35. It is further relevant to state that the Petitioner had also filed a Petition for in principle approval for installation of FGD System being Petition No. 152/MP/2019 which has been disposed of by Hon'ble Commission vide Order dated 11.11.2019.

Re. Truing-up of ARR for the period 2014-19 and Determination of ARR and Generation Tariff for the control period 2019-24

36. The Petitioner had filed Petition No. 408/GT/2020 for Truing-up of ARR for the period 2014-19 and determination of ARR and Generation Tariff for the Control Period 2019-24. This Hon'ble Commission passed an Order on 08.01.2022.

37. Subsequently, the Petitioner filed a Review Petition before Hon'ble Commission against Order dated 08.01.2022 vide Review Petition No. 04/RP/2022 dated 24.02.2022 seeking review of certain claims not considered in said Order. This Hon'ble Commission disposed of the Review Petition No. 04/RP/2022 vide its Order dated 13.12.2022. Since, certain issues were not allowed in favour of the Petitioner, the Petitioner had filed Appeal No. 12 of 2023 challenging the Order dated 08.01.2022, and the same is still pending for consideration.

38. The present Petition is being filed before this Hon'ble Commission without prejudice to the rights of the Petitioner pending adjudication before various forums.

B.II. ISSUE WISE SUBMISSION(S) WITH REGARD TO EXPENDITURE CLAIMED ALONG WITH JUSTIFICATION FOR VARIATIONS WITH THE NORMS/

MAITHON POWER LIMITED

PREVIOUSLY APPROVED TARIFF/CHARGES (IN CASE OF TRUING UP)

Re. TRUING UP OF 2019-24

Re. Capital Cost of the Project

39. Unit 1 at MPL was commissioned on 01.09.2011 and Unit 2 was commissioned on 24.07.2012.

40. The Petitioner had filed Petition No. 408/GT/2020 for Truing-up of ARR for the Tariff Period 2014-19 and determination of ARR and Generation Tariff for the Tariff Period 2019-24. This Hon'ble Commission, after following due legal and regulatory process has passed the final Order on 08.01.2022. The Hon'ble Commission, through the said Order, allowed the Capital Cost for the Generating Station at Rs. 478969.24 lakh as on 31.03.2019. The Petitioner aggrieved by the Order filed a review Petition No. 4/RP/2022 in Petition No. 408/GT/2020. The Hon'ble Commission vide Order dated 13.12.2022 allowed the revised Capital Cost as follows:

Table 6: Capital Cost Approved by the Hon'ble Commission till FY 2018-19 (Rs. Lakh)

Particulars	2014-15	2015-16	2016-17	2017-18	2018-19
Opening Capital Cost	432039.88	463204.76	474874.98	475058.38	475895.66
Add: Net Additional capitalisation allowed on cash basis	25567.49	11407.19	100.98	649.07	3421.87
Add: Discharges allowed	4980.50	391.10	72.03	162.07	0.00
Normative IDC allowed	760.89	221.46	10.39	26.14	59.30
Less: IDC capitalised on Books excluding Railways	144.00	349.53	0.00	0.00	0.00
Closing Gross Block	**463204.76**	**474874.98**	**475058.38**	**475895.66**	**479376.83**

41. Capital Cost approved by the Hon'ble Commission for 2019-24 vide Order dated 08.01.2022 in Petition No. 408/GT/2020 is as follows:

Table 7: Capital Cost approved for 2019-24 (Rs. Lakh)

	2019-20	2020-21	2021-22	2022-23	2023-24
Opening Capital Cost	478969.24	484317.13	553551.06	552899.60	552788.32
Net additional capital expenditure allowed within original scope of work of the project	3353.30	66290.72	-1523.46	-526.55	-255.19
Net additional capital expenditure allowed beyond the original scope of work of the project	1896.33	1850.00	850.00	400.00	350.00
Normative IDC allowed	98.26	1093.21	22.11	15.27	12.65
Total net additional capital expenditure allowed	5347.89	69233.93	-651.46	-111.28	107.46
Capital Cost as on 31st March of the year	**484317.13**	**553551.06**	**552899.60**	**552788.32**	**552895.78**

42. Further, the Hon'ble Commission approved the following Annual Fixed Charges and Ash Disposal Expenses for 2019-24:

Table 8: Annual Fixed Charges for 2019-24 (Rs. Lakh)

Particulars	**2019-20**	**2020-21**	**2021-22**	**2022-23**	**2023-24**
Return on Equity	27109.00	29153.01	31044.64	31005.56	30994.24
Interest on Loan	14094.35	14216.55	14014.45	11573.71	9133.87
Depreciation	24588.73	26492.50	28243.13	28223.66	28223.56
O & M Expenses	26373.72	27463.83	28611.06	29817.26	31082.31
Interest on Working Capital	8912.61	8424.18	7949.95	7969.34	7992.01
Annual Fixed Charges	**101078.41**	**105750.08**	**109863.23**	**108589.54**	**107425.98**
Ash Disposal Expenses	3425.52	3416.16	3416.16	3416.16	3425.52

MAITHON POWER LIMITED

43. Accordingly, the closing Capital Cost of Rs. 479376.83 lakh as on 31.03.2019 as approved by the Hon'ble Commission *vide* Order dated 13.12.2022 in Review Petition No. 4/RP/2022 has been considered as opening Capital Cost as on 01.04.2019.

Re. Additional Capital Expenditure

44. The details of the Additional Capital Expenditure (ACE) incurred within the Original Scope of Work and the Additional Capital Expenditure (ACE) beyond the Original Scope of Work including justifications to incur the same are explained in the following paragraphs. A copy of Auditor's Certificate certifying package/ scheme wise addition to Property Plant and Equipment (PPE) & Right of Use Assets (ROU) for financial years ended 2019-20 to 2023-24 is annexed herewith and marked as **ANNEXURE P/5**.

Table 9: Summary Table for Additional Capital Expenditure (ACE) incurred during the Tariff Period FY 2019-20 to FY 2023-24 (Rs. Lakh)

#including IDC of Rs. 18391.61 lakh in Railway System. For all other schemes, the ACE is without IDC and Normative IDC has been shown separately in the Tariff Forms and in the section dealing with Normative IDC.

** Rs. 71367.80 lakh in Railway System includes ACE of FY 2015-16*

B.II.A. ADDITIONAL CAPITAL EXPENDITURE WITHIN THE ORIGINAL SCOPE OF WORK, BUT AFTER THE CUT-OFF DATE

B.II.A. a. Expenditure approved in Order dated 08.01.2022

i. Cost of Land and Site

45. This Hon'ble Commission, in its Order dated 08.01.2022 in Petition No.

408/GT/2020, approved an expenditure of Rs. 3881.64 lakh in 2019-20 towards the cost of 'Land & Site'. The projected expenditure was envisaged for the payment of the revised demand for 114.95 acres GM land as per the then available 2018 circle rate at Rs.3358.00 lakh (i.e. net of revised demand of Rs. 3528.00 lakh and already paid amount of Rs 170.00 lakh) and balance Rs. 524 Lakh was towards remaining 20% payment demand for land acquired for railway corridor with following break-up:

- Rs. 60 lakh for 4.81 acres of Krishi farmland.
- Rs. 125.00 lakh for 6.96 acres of GM Land (Stage 1).
- Rs.129.00 lakh for 6.01 acres of GM Land (Stage 2). and
- Additional contingency expenditure of approximately Rs. 210.00 lakh.

46. The relevant extracts of the Order dated 08.01.2022 are reproduced below for ready reference-

> *"For these reasons, the projected additional capitalization of Rs.68506.24 lakh for 'Railway Infrastructure Package' in 2020-21 and* ***the projected additional capitalization of Rs.4041.64 lakh (Rs.3881.64 lakh for cost of Land and Site and Rs.160.00 lakh for General Civil Works) in 2019-20 is allowed under Regulation 25(1)(a) of the 2019 Tariff Regulations****. However, the total cost including cost disallowed for the year 2015-16 on Railway Package shall be considered and dealt on merits, after prudence check, at the time of truing-up."*
>
> [***Emphasis Supplied***]

47. The Petitioner submits that despite taking adequate precautions and diligently following up with the relevant Government Authorities, including the Land and Revenue Department of the Government of Jharkhand (GoJ), the Petitioner has not received the revised or balance payment demand for the parcels of land under consideration. Consequently, the Petitioner has not claimed any expenditure against the approved amount of Rs. 3882 Lakh for the period 2019-24. A detailed

account of the progress and reasons for the delay with respect to each parcel of land is annexed hereto and marked as **ANNEXURE P/6A (COLLY)**.

48. It is further submitted that the delay in the issuance of revised or balance payment demand is primarily attributable to the following uncontrollable factors:

(a) The pending disposal of Suit No. 2091 of 2020 before the District Court of Dhanbad.

(b) The inter-departmental transfer of agricultural land.

(c) The computation of the balance 20% payment by the appropriate authority.

(d) These factors, as elaborated in the foregoing paragraphs and aforesaid Annexure, are entirely beyond the control of the Petitioner.

49. The Petitioner respectfully submits that the delays arise from uncontrollable/force majeure conditions. Accordingly, the Petitioner humbly requests this Hon'ble Commission to grant liberty to update and claim the actual costs towards the revised or balance payment demand for the said parcels of land during the True-Up process for the period 2024-29 as elaborated under Right of Use Assets in-line with IND AS 116 which prior to 1.04.2019 were categorized under leasehold lands.

Actual Additional Capitalization of Rs. 126.77 lakh in FY 2020-21 towards purchase of Rayati (Private) Land for MPL Railway Project (Rs. 83.40 lakh included under approved Railway Project cost and additional purchase of 0.64 Acres of land for Rs. 43.37 lakh)

50. The Petitioner submits that there was delay in handover of clear lands due to wrong claim settlement by government authorities, which was condoned in Order dated 08.01.2022, and Petitioner received access of disputed land parcels in FY

2020-21. Due to the deviation between the actual site conditions and the design estimations it was observed that owing to the uneven terrain retaining walls were required to be constructed between bridge no BR 11- BR 12 of the original route for which access was possible only after the filing of the Tariff Petition No. 408/GT/2020 in January 2020 and, hence, said cost could not be factored/projected at that time.

51. It was observed that the cost for construction of the retaining wall would be Rs. 275.37 Lakh. Owing to the already delayed commissioning and associated increase in cost, the Petitioner being a prudent utility analysed alternative methods for resolution and it was observed that with slight change in the original route, requiring buying of additional land parcels and then filling the same with Sand/Soil/Compaction/civil construction for required elevations, would result in cost savings to the tune of Rs. 232.00 Lakh compared to the cost of retaining wall in the original route. A copy of the detailed Cost-Benefit Analysis and underlying calculations in relation to retaining wall construction are attached as **ANNEXURE P/6 B**.

52. Accordingly, the Petitioner in order to resolve the issue, reduce the scope of work and duly considering the cost benefit analysis procured the additional parcels of land which costed about Rs. 43.37 lakh in FY 2020-21 and this increase was beyond the control of the Petitioner as it could not assess the exact requirement in absence of access of disputed parcels of land. Therefore, the Petitioner humbly requests the Hon'ble Commission to allow capitalization towards the land cost of Rs. 126.77 Lakh during the year 2020-21.

ii. Right of Use Assets:

Actual Additional Capitalization of Rs. 326.86 lakh in FY 2020-21, Rs. 325.25

lakh in FY 2021-22 and Rs. 4869 lakh in FY 2023-24 towards leasehold lands.

53. The Petitioner has capitalized following amounts under Right of Use assets in the books of accounts during the period 2019-24:

(In Rs. Lakh)

FY 2019-20	FY 2020-21	FY 2021-22	FY 2022-23	FY 2023-24
0.00	326.86	325.25	0.00	4869.00

54. These assets, which prior to 1.4.2019 were categorized under leasehold lands are now categorized as Right of Use assets in line with IND AS 116 implemented on 1.4.2019 and, accordingly, these assets are identified as leasehold land. Out of the expenditure shown above Rs. 326.86 lakh pertains to renewal of land license for 8.04 hectare of land provided by Eastern Railway for Petitioner's Railway infrastructure project and, accordingly, has been claimed under 'Railway System'. A copy of the Eastern Railway's Letter No L/Lease License/19 Dated 09.04.2019 regarding renewal of land license and consequential fees is enclosed hereto and marked as **ANNEXURE-P/7 A**.

55. The amount of Rs. 325.25 lakh in 2021-22 and Rs. 1229.64 in FY 2023-24 (part of Rs. 4869 lakh) was recognized towards past/future liabilities arising on account of revised lease rent by DVC towards land license in connection with Water withdrawal from Maithon Reservoir as per the Clause - 01(a)(iii) of executed agreement dated 14.05.2010.

56. With regard to revised lease rent by DVC, it is humbly submitted that Petitioner executed an agreement with Damodar Valley Corporation (DVC) on 14.05.2010 for withdrawal of water from Maithon Reservoir including leasing of DVC land measuring 5,62,736.69 Sq. Ft for intake structure and pipeline etc for period of 35

years. MPL had initially paid rental charges of Rs 1,96,95,784.15/- for land license from 15.03.2009 to 14.03.2044 (total 35 years) at erstwhile rate of Rs 1/ Sq. Ft (for 12 months period)

57. Subsequent to above, DVC has revised land license rate @ Rs 6.00/- per sq. ft for each term of license i.e. 11 (eleven) months vide DVC office memorandum no. Sectt/LA/Rent (Pt)/2011/1004 dated 03.09.2012 and, accordingly, requested to pay the differential lease rent in terms of clause 01 (a) (iii) of the aforesaid executed agreement. Relevant extract of the agreement is reproduced below:

> *"....The rent is subject to change as and when revised by the 'The Corporation' during the pendency of the lease period and the 'Second Party' is liable to pay the balance admissible amount",*

58. Pursuant to above, DVC vide invoice number CE (C) Tariff/Land-Rental MPL/127/BILL (Lease of DVC Land)-18 dated 20-07-2021 has claimed Rs 3,24,06,514.00/- (Rs Three Crore Twenty-Four Lakh Six Thousand Five Hundred Fourteen Only) for period of 03.09.2012 to 31-01-2022. The Petitioner, accordingly, calculated present value of future liabilities from 01.02.2022 till 14.03.2044 and recognised it in books for 2021-22 as Rs. 325.25 lakh. Further, amount of Rs. 324.07 lakh as raised by DVC for differential lease rental for the period 03.09.2012 to 31-01-2022 has been discharged in FY 2021-22. A copy of the Lease Agreement dated 14.05.2010 alongwith copy of DVC bill of Rs. 324.07 lakh dated 29.10.2021 is enclosed as **ANNEXURE-P/7B (COLLY)**.

59. In furtherance to above, DVC, vide invoice number MRO/Water Tariff Cell/Land/MPL/127/407 dated 11-09-2023 has claimed additional Rs. 2,20,55,408/- (Rupees Two Crore Twenty Lakh Fifty Five Thousand Four Hundred Eight Only) as arrears of lease rent upto 31.10.2024. Accordingly, the Petitioner paid arrears aggregating to Rs. 2,20,55,408/- towards lease rent for the

arrears for period 03.09.2012 to 31.10.2024. Noting the revised lease rate with escalation of 7% each year, the Petitioner in accordance with the accounting practices re-calculated the present value of future liabilities from 01.11.2024 till 14.03.2044 as per new revised rate and, accordingly, revised recognition in books from Rs. 325.25 lakh to Rs. 1554.88 Lakhs towards the future liabilities towards revised lease rent payment to DVC. Consequently, adding Right of use assets of Rs. 1229.64 Lakh in 2023-24 (1554.88 lakh less 325.25 lakh) which is part of Rs. 4869.00 lakh as reflected in books. A copy of DVC bill of Rs. 220.55 lakh dated 11.09.2023 is annexed herewith and marked as **ANNEXURE-P/7C**.

60. In FY 2023-24, the Petitioner in accordance with the accounting practices has recognized Right of use assets amounting to Rs. 4869.00 lakh. Out of Rs. 4869.00 lakh, amount of Rs. 1229.64 lakh is towards the payment of land rent to DVC in forthcoming years for land license as discussed above and balance amount of Rs. 3639.36 lakh is in respect of pending/balance demand/ lease rent payable to the Government of Jharkhand towards leasing of following parcels of land in future.

Land Parcel (Acres)	**Net Est. Demand (less earlier payment) (Rs Lakh)**	**Authority**
114.95 GM Land	3054.47	L&R Department/ GoJ
4.81 Krishi Farm Land-Railway	51.79	
6.96 GM Land-Railway	103.84	
6.01 GM Land -Railway	429.26	
Sub-Total-Payable to GoJ	**3639.36**	
12.919-DVC lease land for intake chamber	1229.64	DVC
Sub-Total-Payable to DVC	1229.64	
Grand Total	**4869.00**	As per Books in 2023-24

61. It is noteworthy to mention that these land parcels have been utilized for the Project and for which balance demand/ rent bill is awaited from the concerned authorities. It is pertinent to mention here that aforesaid amounts recognized

under RoU assets are provisional and subject to actual demand/ bill from GoJ/DVC respectively. Further, for the aforesaid RoU assets, consequential lease liabilities have also been recognized in books.

62. Further, the actual payments made against the aforesaid capitalisation towards ROU Assets that have been claimed for computation of Tariff are as follows:

(In Rs. lakh)

Particulars	2019-20	2020-21	2021-22	2022-23	2023-24
ROU Assets	0.00	326.86	325.25	0.00	4869.00
Actual payments claimed in Tariff	0.00	326.86	324.07	0.00	220.55

63. Against above payments claimed in tariff, Rs, 326.86 lakh is claimed under Railway project as stated earlier and for the balance amount, the Petitioner would further like to bring to the notice of the Hon'ble Commission that under Regulation 25(2)(e) of the Tariff Regulations, 2024; the Hon'ble Commission has allowed additional capital expenditure towards renewal of lease of leasehold land recognizing the need of capitalization of same. The Hon'ble Commission may, thus, allow the capital expenditure for the arrear of leasehold land payment towards the bills raised by DVC dated 29.10.2021 & 11.09.2023, already enclosed as Annexure-P/7B and P/7C as being claimed by the Petitioner.

64. The balance lease rental payable to the GoJ (i.e. Rs. 3639.36 Lakh) as recognized in books in terms of accounting practice has already been allowed by the Hon'ble Commission in Tariff Order dated 08.01.2022, however, the said expenditure is yet to be incurred pending demand from Land and Revenue Department, GoJ as elaborated above. The Petitioner humbly requests this Hon'ble Commission to grant liberty to update and claim the actual costs towards the revised or balance

payment demand for the said parcels of land during the True-Up process for the period 2024-29.

65. Considering the above, the Hon'ble Commission may kindly allow the above actual capital expenditure towards the leased land/ROU Assets under Regulation 76, Power to Relax of the Tariff Regulation 2019. Alternatively, the Hon'ble Commission may allow the above cited expenditure towards lease rent payment to DVC for intake chamber land over and above the AFC allowed by the Hon'ble Commission under Regulation 76 of Tariff Regulation 2019.

iii. General Civil Work

66. The Petitioner respectfully submits that the Hon'ble Commission, through its order dated 08.01.2022 in Petition No. 408/GT/2020 (Para 185), had approved an additional capital expenditure of Rs. 160 lakh during FY 2019-20 for General Civil Works under Regulation 25(1)(a) of the Tariff Regulations 2019. It is further submitted that the actual expenditure incurred for the said works amounts to Rs. 246.73 lakh, which is higher than the estimated cost considered in Petition No. 408/GT/2020.

67. It is submitted that this variance arose due to higher actual rates and increase in scope of work as per actual site conditions, which were beyond the control of the Petitioner. In light of the above, the Petitioner respectfully requests the Hon'ble Commission to allow the additional capital expenditure of Rs. 246.74 lakh under Regulation 25(1)(a) read with Regulation 76 of the Tariff Regulations 2019.

iv. Railway System

68. The Petitioner humbly submits that this Hon'ble Commission *vide* order dated 08.01.2022 in Petition No. 408/GT/2020 had allowed additional capital expenditure of Rs. 68506.24 lakh during FY 2020-21 towards the Railway Project

under Regulation 25(1)(a) of the Tariff Regulations 2019. Further, the Hon'ble Commission in the said order also observed that total expenditure towards the Railway Project shall be considered including the cost of Rs. 2861.56 lakh disallowed in FY 2015-16 at the time of Truing-up. The cost disallowed in 2015-16 was towards certain civil assets viz., over-bridges & under passes pertaining to Railway Project for which capitalization was not considered then though these assets were being utilized for smooth movement of public transport since complete work of Railway infrastructure was not over.

69. It is submitted that while appreciating the submissions made by the Petitioner, the Hon'ble Commission held that the delay in Railway Project is on account of events which are not attributable to the Petitioner. The relevant extract of the Tariff Order dated 08.01.2022 in Petition No. 408/GT/2020 has been reproduced below:

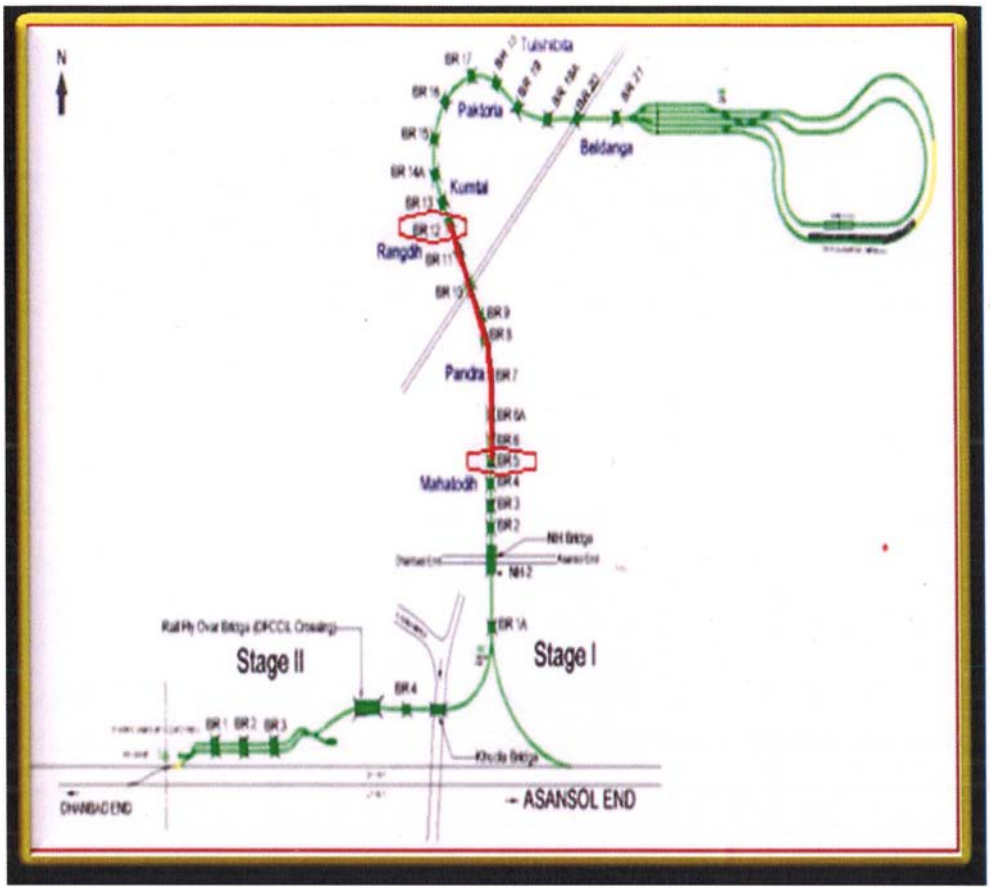
> *"185.*
>
> *...*
>
> *We have, in paragraph 38 to paragraph 46 of this Order, examined the submissions of the Petitioner with regard to the delay in the availability of land & site and the delay in execution of the General Civil Works, consequent upon the non-availability of land, attributed to the change in policy of State Government and Order of the Hon'ble High Court, and allowed the additional capitalisation of the expenditure claimed by the Petitioner for the period 2015-19 under Regulation 14(3)(i) of the 2014 Tariff Regulations, for compliance with the Orders of the Hon'ble Court. Considering the fact that these are balance works which have spilled over from 2018-19 and keeping in view that the Railway Infrastructure Package, being an interdependent activity, contingent upon the clearance of land acquisition issues,* ***we hold, that the delay is on account of events which are not attributable to the Petitioner. In our considered view, the delay due to non-availability of land & site, which has caused the delay in the execution of the General Civil Works for the period 2015-19, holds good for the delay in the completion of Railway Infrastructure Package for the period 2019-21 also. For these reasons, the Projected additional capitalization of Rs.68506.24 lakh for 'Railway Infrastructure Package' in 2020-21*** *and the Projected additional capitalization of Rs.4041.64 lakh (Rs.3881.64 lakh for cost of Land and Site and Rs.160.00 lakh for General Civil Works) in 2019-*

20 ***is allowed under Regulation 25(1)(a) of the 2019 Tariff Regulations. However, the total cost including cost disallowed for the year 2015-16 on Railway Package shall be considered and dealt on merits, after prudence check, at the time of Truing-up.***"

[*Emphasis Supplied*]

70. The Railway Infrastructure Project, planned for commissioning by 31.03.2021 as per the Order dated 08.01.2022, faced delays due to uncontrollable factors despite the completion of siding works by March 2021. Consequently, the project could only be operationalized on 10.03.2022, due to reasons beyond the Petitioner's control. These uncontrollable factors/reasons after filing of Petition No. 408/GT/2020 on 30.01.2020 are summarised below:

(a) **Land acquisition issues:** The Petitioner suffered severe Right of Way (RoW) issues while acquiring the land for the Railway Project, major challenge was to complete project activities on plots referred to Land Acquisition (LA) Court in Pandra village, particularly, the 2.3 km long stretch from Bridge 5 to Bridge 12 (The affected portion is depicted in the schematic diagram below). Even after identifying the rightful owners by District Administration on 132 plots, various claimants of other disputed plots continued to keep resisting works in various plots on various pretexts. On several occasions, the Petitioner requested for local administration support to execute work on plots referred in LA Court acquired in railway corridor. A copy of the Letters dated 22.09.2020, 30.11.2020 and 18.12.2020 written by the Petitioner to local administration for providing support for carrying out the construction work are annexed hereto and marked as **ANNEXURE P/8-A (COLLY).**



(b) **Covid 19 Pandemic (First Wave):** Government of India imposed Lockdown due to Covid 19 pandemic with effect from 23.03.2020 and subsequently extended it till 17.05.2020. Covid 19 situation was unprecedented and had wide-spread ramifications. Entire rail infrastructure Project work was also interrupted. The restrictions were gradually lifted, and as a result, the Project's work also progressed gradually along with getting peaceful possession of land parcels in a piecemeal manner. The Central Government has recognised Covid 19 Pandemic as a *Force Majeure* event affecting various procurement and project activities. The Petitioner's Railway Project being no exception also deserves to be granted condonation for delay on account of Covid 19 being Force Majeure event beyond the control of the Petitioner. In fact, Ministry

MAITHON POWER LIMITED

of New and Renewable Energy ("**MNRE**") *vide* its O.M. dated 13.08.2020, 09.02.2021 and 30.03.2021 granted a blanket extension of five months (six months on case-to-case basis) to the Renewable Energy implementing agencies considering the devastating impact of the Covid 19. At this stage, the Petitioner is not enclosing the trail of containment Orders issued by Central/State Government that are available on their website and shall submit the same if required by this Hon'ble Commission. True copies of the Orders dated 13.08.2020, 09.02.2021 and 30.03.2021 issued by MNRE have been annexed hereto and marked as **ANNEXURE P/8-B (COLLY)**.

(c) **Land subsidence:** On 08.06.2020, land subsidence was noticed wherein significant collapse of land below the ground level between the chainage +550 to + 600 was observed. This resulted in damage of 1000 sqm area in vicinity and the Petitioner's railway line. Railways also acknowledged land subsidence which was just 25 m away from down grand chord line of eastern railway near Thapar Nagar and sought to take necessary action. Indian School of Mines ("**ISM**") conducted Electrical Resistivity Tomography ("**ERT**") for mapping of possible void/illegal mining zones and its horizontal extension geometry and depth extension along railway line Thapar Nagar. This unforeseen geological surprise caused work to get delayed in the affected patch of land by about 3-4 months and cumulatively with First Wave of Covid 19 caused work to get resumed gradually only at the end of September 2020. A true copy of the Report of ISM is enclosed as **ANNEXURE P/8-C .**

(d) **Covid 19 Pandemic (Second Wave):** After gradual removal of restrictions and with the support of local administration, the Petitioner had completed

the siding works and had applied for approval of Commissioner of Railway Safety (CRS) on 18.11.2020. The Petitioner had, therefore, on 02.03.2021 requested Senior Divisional Commercial Manager, Eastern Railway to allot ALPHA and NUMERICAL Code to the Petitioner's Railway Siding so that connectivity work may be taken up immediately after CRS approval. A true copy of the Petitioner's letter dated 02.03.2021 to the Senior Divisional Commercial Manager, Eastern Railway has been annexed herewith and marked as **ANNEXURE P/8-D.**

(e) However, the Second Wave of Covid 19 Pandemic hit the country in March 2021, which was much more widespread and devastating. State Governments under Guidelines from Government of India had to, therefore, impose restrictions again with effect from 23.03.2021 that were subsequently extended in phases till 31.07.2021. The restrictions were again removed in phases and, accordingly, the approval of various components of the Project from Railways could also be obtained gradually. In fact, MNRE issued O.M. dated 12.05.2021, 29.06.2021, and 15.09.2021 after taking into account the impact of the second wave of COVID-19, allowing the period from 01.04.2021 to 15.06.2021 or 2.5 months for blanket extension of time in the SCOD of the RE Projects. True copies of the Orders dated 12.05.2021, 29.06.2021 and 15.09.2021 issued by MNRE have been annexed herewith and marked as **ANNEXURE P/8-E (COLLY).**

(f) **Long and protracted procedure of approval by Railways:** After completion of siding and electric traction work, the Petitioner had to take approval of various Railway authorities. The approval process took much longer than expected due to Covid 19 restrictions and also the cumbersome

time-consuming process of sequential approvals followed by Railways. For each of these clearances/approvals, Railways used to nominate its representative and schedule a visit of the site, which itself was very much time consuming.

(g) The clearance was further delayed if certain observations for modification were made during the visit and entire process had to be repeated after addressing the observations. Accordingly, the approvals for notification of siding were in place on 16.09.2021 but due to notification of GCT Policy on 15.12.2021, the siding notification could finally take place on 08.03.2022. The following Table captures the dates of various approvals:

S. No.	Approval Required	Date of Completion
1.	**CRS sanction:** Commissioner of Railway Safety, Eastern Circle *vide* its letter to DRM, Eastern Railway, Asansol division in response to the Application no: SH-I/Pt.XX/Drg./TNW dated 18.11.2020 of the Petitioner accorded Sanction subject to some stipulations for Rail infrastructure of the Petitioner at Thapar Nagar Asansol division. A true copy of Letter dated 10.05.2021 issued by Commissioner of Railway Safety, Eastern Circle is annexed herewith and marked as **ANNEXURE P/8-F**	10.05.2021
2.	**Track Fitness Certificate:** Track fitness certificate of private railway siding under Asansol division to serve the Generating Station was provided by Sr. Section Engineer, Eastern Railways.	04.06.2021

S. No.	Approval Required	Date of Completion
	A true copy of Certificate dated 04.06.2021 for Track Fitness of Private Railway Siding under Asansol Division to serve the Generating Station has been annexed herewith and marked as **ANNEXURE P/8-G**	
3.	**Overhead Equipment (OHE) Checking:** After completion of construction work for connectivity of newly erected 25 kV OHE line and joint inspection on 12.06.2021 and 22.07.2021, on 27.07.2021, the Petitioner requested for Sanction of EIG for opening of newly erected 25 kV OHE line taking off with Y connection from Mugma and Thaparnagar station. On 18.08.2021 Eastern Railway intimated granting sanction for the same. A true copy of Eastern Railway sanction dated 18.08.2021 has been annexed herewith and marked as **ANNEXURE P/8-H**	18.08.2021
4.	**Electrical Inspector (EIG) Clearance:** EIG sanction was accorded for energization and commissioning of new switching post at Mugma (SS) AT 25 kV AC 50 Hz single phase. A true copy of EIG sanction dated 31.08.2021 has been annexed herewith and marked as **ANNEXURE P/8-I** On the same date, EIG sanction for 25 kV AC 1 Phase charging of newly erected traction Overhead Equipment (OHE) of the lines for the Petitioner's Generating Station was granted to the Petitioner.	31.08.2021

S. No.	Approval Required	Date of Completion
	A true copy of EIG sanction dated 31.08.2021 has been annexed herewith and marked as **ANNEXURE P/8-J**	
5.	**Engine Trial Run/25 kV OHE Charging:** Joint note in connection with electric engine trial run from Thapar Nagar to MPL and OHE fitness was prepared, giving observations/ shortcomings if any in presence of MPL/L&T and Railway representatives. A true copy of Joint Note for Engine Trial/OHE has been annexed herewith and marked as **ANNEXURE P/8-K (COLLY)**	03.09.2021
6.	**OHE Fitness Joint Note:** With reference to the joint note issued on 03.09.2021, compliance to the observation made attained and complied for OHE were reported. A true copy of joint Compliance Report dated 18.09.2021 has been annexed herewith and marked as **ANNEXURE P/8-L**	18.09.2021
7.	**Eastern Railway asked to rectify the Deficiencies noted in 03.09.2021 loco trial:** With reference to the joint note issued for LOCO trial TNW-MPL siding line conducted on 03.09.2021, Eastern Railway on 06.10.2021 asked the Petitioner for its rectification and compliances. A true copy of letter dated 06.10.2021 has been annexed herewith and marked as **ANNEXURE P/8-M**	06.10.2021
8.	**The Petitioner requested for approval after removal of deficiencies in letter dated**	11.10.2021

S. No.	Approval Required	Date of Completion
	06.10.2021 including OHE fitness joint note: In response to letter dated 06.10.2021, the Petitioner submitted its observation status on 11.10.2021 and requested Railways for review and accordingly provide acceptance. A true copy of Letter dated 11.10.2021 has been annexed herewith and marked as **ANNEXURE P/8-N**	
9.	**Joint Note: TI/GC, CLI Side:** With reference to Joint note dated 03.09.2021 in connection with electric engine trial run on track for the Petitioner's railway siding, compliance report was issued from TR/GC and CLI side. A true copy of Joint note dated 23.11.2021 has been annexed herewith and marked as **ANNEXURE P/8-O**	23.11.2021
10.	**Provisional opening of Siding Notification:** Provisional opening of GCT of the Petitioner served by Thapar Nagar station was allowed. A true copy of provisional opening of Siding Notification dated 08.03.2022 is annexed herewith and marked as **ANNEXURE P/8-P.**	08.03.2022
11.	**Placement of Rake:** With the receipt of first coal Rake, Rake operation commenced at the Private Siding of the Petitioner. A true copy of receipt confirmation letter dated 14.03.2022 is annexed herewith and marked as **ANNEXURE P/8-Q.**	10.03.2022

(h) On 24.11.2021, a meeting was held between the officers of Eastern Railway and the Petitioner regarding operationalisation of the Petitioner's private

siding, pending completion of works at Mugma station and Wagon Tippler at Generating Station as these works were no more required. In the meeting, Petitioner stated that earlier maximum amount of coal linkage was scheduled from BCCL sources (from Thaparnagar side) and a only a small volume from ECL sources (from Mugma side), however, contrary to earlier plan, all of the coal rakes intended for the Generating Station are currently sourced from BCCL. Therefore, there was no need for the proposed loop at Up-side of Mugma Station. In this regard, it was apprised by GM, Eastern Railway that in the present Policy of Railway Board there is no provision to issue provisional notification for opening of the siding pending some works. Therefore, the siding may be opened once completion certificate for Phase- I works is issued by the Division.

(i) For the approval of deviation in DPR by Railway Board, GM, Eastern Railways advised the Petitioner to write to Divisional Railway Manager ("**DRM**"), Eastern Railway, Asansol giving reasons for delay in completion of Phase-I work and for deviation from DPR with proper justification. DRM, after examination of the issue, would forward it to Railway Head Quarter for getting dispensation of Railway Board and once dispensation is issued from Railway Board, the issue of pending works can be proceeded accordingly. The relevant extract of the MoM dated 26.11.2021 issued for the meeting dated 24.11.2021 has been reproduced below:

> *"8. General Manager was kind enough to address the meeting. He mentioned that* ***there is no provision in the Policy framed by RB to issue provisional notification for opening the siding pending some works****. In the instant case since Ph-II, Ph-III works are not coming in recent times, the siding may be opened once completion certificate for Ph-I works is issued by Division.....*
> ***He advised MPL authorities to write to DRM giving reasons of***

delay in completion of Ph-I work and deviation from project report with proper justification. *Division after examining the issue, would forward it to HQ for getting dispensation from Railway Board. Once dispensation is issued from Railway Board, the issue will be suitably appreciated."*

[Emphasis Supplied]

A true copy of the MoM dated 26.11.2021 issued for the meeting dated 24.11.2021 has been annexed herewith and marked as **ANNEXURE P/8-R.**

(j) Accordingly, on 26.11.2021, the Petitioner vide its letter to DRM, Eastern Railway, Asansol, informed that entire stretch of Railway line as per Phase-I is ready for operation (out of 13 works 11 essential works had been completed) and, hence, a formal request for notification of siding had already been submitted. The Petitioner through the letter sought dispensation from two works that were no more required, viz. (i) Wagon Tippler and (ii) additional loop line at Mugma Station, which were part of original DPR on the following grounds:

(k) **Wagon Tippler**: Adequate provision for unloading of coal through Track Hopper and Wharf in lieu of Tippler has already been made by the Petitioner and, therefore, the installation of Wagon Tippler was not required now.

(l) **Mugma Loop Line**: The Mugma Up loop line was proposed in the DPR with the assumption that coal rakes would come from ECL, i.e. Mugma side. However, after the FSA signed with BCCL and CCL, which is valid until the years 2030 and 2032, respectively, the Petitioner would only receive rakes from Thaparnagar end. Therefore, the entire rake movement shall be on downside of Pradhankhunta to Sitarampur Section. Therefore, the requirement of Mugma Up loop line becomes redundant and, hence, not required.

(m) Accordingly, the Petitioner sought the above deviations/dispensations from the original DPR on the ground of redundancy of the Wagon Tippler and Mugma Loop Line and requested for the issuance of Siding Notification to start the receipt of Rakes to meet the coal requirement of the Generating Station. A true copy of the letter dated 26.11.2021 issued by Petitioner to Eastern Railway has been annexed herewith and marked as **ANNEXURE P/8-S.**

(n) On 03.12.2021, DRM, Eastern Railway, Asansol *vide* its letter to Principal Chief Operations Manager, Eastern Railway, while appropriately dealing with modification in the original DPR, recommended the proposal of the Petitioner for issuance of siding Notification. A true copy of the Letter dated 03.12.2021 issued by DRM, Eastern Railway, Asansol has been annexed herewith and marked as **ANNEXURE P/8-T.**

(o) In the meanwhile, on 15.12.2021, Ministry of Railways, Government of India issued a Master Circular on GCT Policy 2021 to boost investment from industry in development of additional terminals for handling rail cargos. According to the Master Circular, all new as well as under-construction/ under-approval Cargo Terminals shall be covered by GCT Policy 2021. The Petitioner's siding being under construction/under-approval Cargo Terminal was squarely covered under the GCT Policy 2021. It should be noted that, the bottleneck of DPR approval was removed in the GCT Policy 2021. However, there was a requirement to transfer ownership of all assets on Railway land created at the cost of Gati Shakti Multi-Modal Cargo Terminal Operator ("**GCTO**") (Petitioner in this case) to the Railways and for this purpose an Agreement is required to be signed. A true copy of GCT

Policy 2021 is annexed hereiwht and marked as **ANNEXURE P/8-U.**

(p) On 05.01.2022, Railway Board addressed to Principal Chief Operations Manager, Eastern Railway and issued the clarification on Private Siding Policy regarding modification in DPRs of ongoing proposals where DPR was approved prior to issuance of FM Circular no. 11 of 2016 and stated that:

> *"... As per Para 1.1 of GCT Policy,* ***all new as well as under-construction/under-approval Cargo Terminals (approved/proposed under the 'Private Siding' or ' Private Freight Terminal' policies) shall be covered by the GCT policy****.*
> *It may further be noted that the GCT Policy 2021 has no provision of Detailed Project Report and any further action regarding notification and commissioning of the Terminal may be taken as per the provisions of paras 10.1, 11 & 11. 1 of 'Schedule-1' of the Policy."*

(q) Accordingly, the Petitioner's Railway Project being under-construction/under-approval was categorically said to be covered under GCT Policy 2021. Also, there was no provision of DPR in the new Policy, which meant that there was no need of getting any approval for deviations. A true copy of the Letter dated 05.01.2022 issued by Railway Board is annexed herewith and marked as **ANNEXURE P/8-V**

(r) In response to Petitioner's letter dated 26.11.2021 and DRM, Eastern Railway letter dated 03.12.2021, Chief Transmission Planning Manager, Eastern Railway vide letter dated 25.01.2022 advised DRM, Eastern Railway that representation of the Petitioner may be dealt as per GCT Policy 2021 and forwarded the letter dated 05.01.2022 from Railway Board for taking further necessary action. Pertinently, a copy of Letter dated 25.01.2022 was marked to the Petitioner to approach the Division on this issue. A true copy of Letter dated 25.01.2022 issued by Chief Transmission Planning Manager, Eastern Railway and GCT Policy 2021 is

annexed herewith and marked as **ANNEXURE P/8-W (COLLY).**

(s) On 27.01.2022, the Petitioner *vide* its letter to DRM, Eastern Railway, Asansol requested to migrate to the revised policy of GCT Policy 2021 as per Railway Board Guidelines. The Petitioner further stated in the letter that there are some changes from the earlier DPR submitted and, therefore, in terms of Clause 11 and 11.1 of GCT Policy 2021, the Petitioner submitted revised Engineering Scale Plan ("**ESP**") for approval of DRM. A true copy of Letter dated 27.01.2022 written by the Petitioner to DRM, Eastern Railway, Asansol has been annexed herewith and marked as **ANNEXURE P/8-X**.

(t) On the same day, i.e. on 27.01.2022, DRM responded to the request of the Petitioner and *inter alia* directed the Petitioner to pay security deposit and submit revised ESP for scrutiny to the Division and, accordingly, after approval of ESP, further action regarding Notification of siding would be undertaken. A true copy of Letter dated 27.01.2022 written by DRM to the Petitioner has been annexed herewith and marked as **ANNEXURE P/8-Y.**

(u) With reference to DRM, Asansol letter dated 27.01.2022, the Petitioner reverted vide letter no: MPL/FY22/22-01/026 dated 28.01.2022 and submitted the information pertaining to the compliances as per the new GCT Policy 2021 with regard to the security deposit, clearance of dues and submission of revised ESP. A true copy of Letter dated 28.01.2022 issued by the Petitioner to DRM, Eastern Railway has been annexed herewith and marked as **ANNEXURE P/8-Z.**

(v) On 28.01.2022, the Petitioner vide its letter No: MPL/FY22/22-01/026 also submitted the justifications for the revised ESP. A true copy of the Letter dated 28.01.2022 issued by the Petitioner is annexed herewith and

marked as **ANNEXURE P/8-AA**.

(w) On 16.02.2022, the Petitioner executed an undertaking that it will abide by all the provisions of the GCT Policy 2021 in terms of Master Circular dated 15.12.2021. On the same day, a Private Siding Memorandum of Agreement ("**MoA**") was executed between the Petitioner and Indian Railways, which primarily incorporated all provisions of GCT Policy 2021. It was mentioned at Clause 5.2 of the Agreement that ownership of infrastructure including the track, signalling equipment and OHE created on Railway land shall belong to Railways, even though the Capital Cost for these shall be borne by the GCTO (Petitioner in this case). A true copy of Undertaking and MoA dated 16.02.2022 is annexed herewith and marked as **ANNEXURE P/8-AB (COLLY.).**

(x) On 22.02.2022, DRM, Eastern Railway, Asansol Division vide a Circular/Commercial Notification declared provisional opening of GCT siding served by Thapar Nagar Station over Asansol division w.e.f. 23.02.2022. However, on the same day at 22:36 hrs, a Freight Operations Information System (**"FOIS"**) message was issued stating that opening of GCT siding issued by Commercial Notification dated 22.02.2022 to be kept on hold till compliance of observation of Chief Engineer (P&D) Eastern Railway. Therefore, the Commercial Notification was 'kept in abeyance' by the FOIS dated 23.02.2022. A true copy of Circular/Commercial Notification dated 22.02.2022 and FOIS message dated 22.02.2022 are annexed herewith and marked as **ANNEXURE P/8-AC (COLLY.).**

(y) On 07.03.2022, Railway Board issued a circular to all Zonal Railways and observed that as per provision of Para No. 18.1 of GCT policy 2021, an

Agreement for GCT shall be signed before the issue of Commercial Notification and operation of the GCT by Railway. It was further clarified by the Railway Board that all new as well as under construction/under approval cargo terminals shall be covered by GCT Policy 2021. Further,

(z) Standard Agreement is under the process of finalisation and approval. Therefore, the commissioning of new Terminals shall not be delayed on account of non-availability of Standard Agreement and Zonal Railways may notify new Terminals by issuing, on ad-hoc basis, comprehensive Notifications having details of the relevant provisions of the GCT Policy 2021.

(aa) Thus, pending finalisation and signing of Standard Agreement as per Clause 18.1 of the GCT Policy 2021, the Divisions were permitted to issue Commercial Notifications for new sidings. A true copy of Circular dated 07.03.2022 issued by Railway Board is annexed herewith and marked as **ANNEXURE P/8-AD**.

(bb) Upon the above relaxation, on 08.03.2022, 'Kept in abeyance' status was withdrawn by Eastern Railway and provisional opening of GCT of the Petitioner served by Thapar Nagar station was allowed with w.e.f. 09.03.2022. A true copy of Circular dated 08.03.2022 issued by Eastern Railway is annexed herewith and marked as **ANNEXURE P/8-AE.**

(cc) On 10.03.2022, with the receipt of first coal Rake, Rake operation commenced at the Private Siding of the Petitioner. Accordingly, India's first GCT, since publication of Master Circular on GCT Policy 2021 in December 2021 was made operational by the Indian Railways at Thaparnagar.

(dd) On 14.03.2022, the Petitioner intimated Divisional Railway about

successful operationalisation of India's first private siding under GCT Policy 2021 and receipt of first coal rake on 10.03.2022. It may be noted that even after completion of Project certifications/clearances in November 2021 and repeated follow ups, internal procedures of Railways took almost 3 months to declare the Petitioner's siding commercially open, which was completely beyond the reasonable control of the Petitioner. A true copy of Letter dated 14.03.2022 issued by the Petitioner to Divisional Railway is annexed herewith and marked as **ANNEXURE P/8-AF**.

(ee) On 07.07.2022, Railway Board, Ministry of Railways issued model Agreements under GCT Policy 2021 for GCT on Private Land and for GCT entirely/partially on Railway Land. A true copy of the Model Agreement issued by Railway Board on 07.07.2022 is annexed herewith and marked as **ANNEXURE P/8-AG**.

(ff) On 04.08.2022, Senior Divisional Commercial Manager, Eastern Railway requested the Petitioner for execution of GCT standard agreement with reference to Railway Board's Notification dated 07.07.2022. A true copy of letter dated 04.08.2022 issued by Senior Divisional Commercial Manager, Eastern Railway is annexed herewith and marked as **ANNEXURE P/8-AH.**

(gg) As the ownership of infrastructure including the track, signalling equipment and OHE created on Railway land by the Petitioner needs to be transferred to Indian Railways, hence, the Petitioner filed the Petition No. 11/MP/2023 for seeking approval of this Hon'ble Commission to enter into an Agreement with the Railways.

71. In view of the above, it is submitted that in spite of completion of Railway Package siding works till March 2021, the clearances/approvals could only be obtained in

November 2021 (i.e. on 23.11.2021). Further, due to Notification of GCT Policy 2021 in December 2021, the Railway Project could finally be made operational on 10.03.2022.

72. As evident from above, the Railway Infrastructure Project of the Petitioner got delayed on the account of several uncontrollable factors which were beyond the control of the Petitioner including Covid 19 pandemic and cumbersome approval process. From the background given above, it may be seen that the Petitioner was ready with all approvals/clearances in place on 23.11.2021 and was awaiting final notification of siding by Railways. This was about 7.5 months beyond the approved dated 31.03.2021 granted by the Hon'ble Commission vide its Order dated 08.01.2022 in Petition No. 408/GT/2020. Notably, 7.5-8.5 months is also the period waived by MNRE for RE Projects under blanket extension for Covid 19 pandemic (first and second wave).

73. In addition to the foregoing, it is submitted that after 23.11.2021 Railways took its own time to finally apprise the Petitioner on 25.01.2022 that its Project would now fall under the GCT Policy 2021 notified on 15.12.2021. As a result of the uncontrollable delays, the Petitioner's Project falls under GCT Policy 2021, and compliance with the same is required. The various reasons for the delay would be classified as force majeure, and the Petitioner's mandate to be covered under GCT 2021 would be classified as compliance with existing law/change in law.

74. The GCT Policy 2021 simplified the application and approval process, promoting investment and improving cargo terminals. The policy requires the Petitioner to bear the cost of assets on railway land and transfer ownership to Indian Railways. This transfer does not affect the Petitioner's right to use the assets for railway transportation and does not impact the Tariff determination by Hon'ble

MAITHON POWER LIMITED

Commission. The new policy facilitated quicker approvals without the need for previously required assets, allowing the Petitioner to expedite the Project. The Hon'ble Commission *vide* Order dated 20.01.2024 in Petition No. 11/MP/2023 observed that the Petitioner is mandated to comply with the provisions of the prevailing GCT Policy 2021. Accordingly, the Hon'ble Commission allowed the Petitioner to sign an agreement with the Indian Railways and transfer ownership rights of its infrastructure, including the track, signalling equipment and OHE created on Railway land to Indian Railways. Further, the Hon'ble Commission granted the Petitioner the liberty to transfer railway assets created on non-railway land based on its own cost-benefit analysis, in terms of GCT Policy 2021.

75. With regard to capitalization of Railway Assets in books, it is submitted that the Petitioner had capitalized the assets amounting to Rs. 2524.68 lakh in 2019-20, Rs. 60883.18 lakh (Rs. 51947.42 lakh as hard cost & Rs. 8935.76 lakh as IDC) in 2020-21 and Rs. 52.79 lakh in 2022-23 in terms of the Accounting Standards. In addition to above, amount of Rs. 2861.56 lakh (Rs. 2412.62 lakh as hard cost and Rs.448.94 lakh as IDC) was capitalized in FY 2015-16 which is required to be considered at the time of truing-up of the cost in terms of liberty granted by the Hon'ble Commission in the Order dated 08.01.2022 as explained in the preceding paragraphs. Accordingly, total hard cost as per books works out to Rs. 56884.71 lakh (Rs. 2412.62 lakh + Rs. 2524.68 lakh + Rs. 51947.42 lakh) and IDC as per books comes out to Rs. 9384.70 lakh (Rs.448.94 lakh + Rs. 8935.76 lakh) till FY 2020-21.

76. Accordingly, the additional capital expenditure towards Railway Project as per books is Rs. 66269.42 lakh (Rs. 56884.71 lakh towards hard cost and Rs. 9384.70 lakh as IDC) till March'21 and Rs. 52.79 lakh in 2022-23. However, since Railway

MAITHON POWER LIMITED

Project got operational on 10.03.2022 post all clearances from Railways as discussed above, the Petitioner for the purpose of Tariff has claimed the capitalization of the Railway Package in FY 2021-22 in terms of above total capitalizations of Rs. 66269.42 lakh as per books plus normative IDC of Rs. 9006.91 lakh upto 10.03.2022 and adjusting inbuilt cost of funding of Rs. 1084.94 lakh in hard cost of Rs. 56884.71 lakh as per Auditor Certificate in accordance with approach approved by the Hon'ble Commission in the Tariff Order dated 08.01.2022. The computation of Normative IDC for Railway Package has been elaborated in section of Normative IDC on Additional Capitalization later and, therefore, it is not repeated herein for sake of brevity. Further, since capitalization towards Railway Package is being claimed in FY 2021-22, the capitalizations and liabilities of Railway Package for financial years prior to FY 2021-22 have been considered under exclusions for the purpose of Tariff up to FY 2020-21. Detailed explanation in this regard is provided in section dealing with Exclusions later and the same may kindly be referred to.

77. The Hon'ble Commission may kindly note that against the total of approved cost and deferred cost of FY 2015-16 of Rs. 71367.80 lakh (i.e. Rs. 68506.24 lakh + Rs. 2412.62 lakh + Rs.448.94 lakh) the Petitioner in the instant Petition is claiming Rs. 74244.18 lakh towards the 'Railway Infrastructure Package'. The total cost of Rs. 71367.80 lakh in FY 2020-21 comprised of hard cost of Rs 55938.42 lakh and IDC of Rs. 15429.38 lakh, which excluding the Capitalization claimed by the Petitioner in FY 2015-16 of Rs. 2412.62 lakh (hard cost) + Rs.448.94 lakh (IDC) was approved as Rs. 68506.24 lakh whereas the actual cost of Rs. 74244.18 lakh comprises of hard cost of Rs. 55799.78 lakh (Rs. 56884.71 - 1084.94 lakh) in FY 2020-21 and Rs. 52.79 lakh in FY 2022-23 i.e. Rs. 55852.57 lakh and IDC of Rs. 18391.61 lakh

which includes IDC of Rs. 9384.70 lakh as per books of accounts and normative IDC of Rs. 9006.91 lakh. The resulting variation in cost of Rs. 2876.39 lakh (i.e. Actual Cost of Rs. 74244.18 lakh less Commission approved cost of Rs. 71367.79 lakh) is due to the increase in IDC by Rs. 2962.23 lakh (Rs. 18391.61 lakh less Rs. 15429.38 lakh) and minor reduction in hard cost by Rs. 85.85 Lakh (Rs. 55852.57 lakh against Rs 55938.42 lakh approved by Hon'ble Commission) is basically the cost towards procurement of Rayati (private) land and is claimed under the head of cost of land and site. The Petitioner humbly submits that increase in the IDC of Rs. 2962.23 lakh is mainly on account of increase in the normative IDC in FY 2021-22 (i.e. Rs. 2670.24 lakh), arising out of the delay in capitalisation of Railway Assets in FY 2021-22 instead of 31.03.2021 (FY 2020-21) which was beyond the control of the Petitioner as specified due to reasons cited above and balance minor variation in IDC is due to change in rate and phasing of expenditures compared to earlier projections.

78. It is noteworthy here to mention that capitalization of Railway Project claimed in FY 2021-22 instead of FY 2020-21 would in-fact reduce the AFC burden of the procures by about 100 Crores between FY 2020-21 and FY 2021-22. The summary of the reduced AFC burden on the procurers has been summarized in the table below:

Capitalization of Railway Project Claimed in FY 22 (In Rs. Lakh)			Capitalization of Railway Project Claimed in FY 21 (In Rs. Lakh)			Reduced AFC Burden (In Rs. Lakh)
2020-21	2021-22	Total	2020-21	2021-22	Total	
1	2	3=1+2	4	5	6=4+5	7=3-6
0.00	5824.72	5824.72	5294.36	10653.34	15947.70	**-10122.98**

79. In other words, since benefit of delayed capitalization by a year is already available

MAITHON POWER LIMITED

with the procurers, impact of IDC of Rs. 2670.24 lakh in FY 2021-22 would be justified to be considered and allowed. Moreover, such delay is mainly for reasons beyond the control of the Petitioner as detailed herein above. A copy of the summary of Capital Cost for Railway Project and corresponding Annual Fixed Charges under both the Scenarios have been provided in **ANNEXURE P/8-AI** for kind reference of the Hon'ble Commission.

80. It may kindly be noted that out of total cost of Rs. 74244.18 lakh claimed on accrual basis, the undischarged liability as on 31.03.2022 of Rs. 1680.24 lakh has been deducted while claiming cash capitalization. The undischarged liability as on 31.03.2024 stood at Rs. 1115.18 lakh. The relevant extracts of the order dated 08.01.2022 in Petition No. 408/GT/2020 regarding approval of cost of Rs. 68506.24 lakh in FY 21 towards the Railway Infrastructure Package including IDC as observed by the Commission in para 185 of the order and direction for approval regarding the capitalisation towards Railway Bridge etc. (i.e. Rs. 24.13 crore + IDC of Rs.4.49 crore) in FY 2015-16 are extracted as under:

> *"180. As regards cost overrun of the Railway Infrastructure Package, the Petitioner has submitted that the same was beyond the control of the Petitioner and the increase in the Railway Infrastructure Package cost forced the Petitioner's Board to re-allocate the project cost. In addition, the Petitioner has stated that the Railway Infrastructure Package contract which was initially awarded to M/s L&T had to be split into three parts, on account of the unforeseen delays and was reallocated among the initial contractor M/s L&T, and the new contractors M/s Amex and M/s Kanwar. The Petitioner's Board in its meeting dated 16.3.2019 had approved the cost and internal allocations under the 'Railway Infrastructure cost' for Rs.574.66 crore excluding IDC. It has further stated that during the execution of the packages identified under Railway infrastructure, the cost allocation was changed and approved by the Board for revised allocation, keeping the overall cost of Railway Infrastructure package within the approved budget of Rs.574.66 crore in the Board meeting dated 16.10.2019. The Petitioner has submitted that the total IDC is Rs.152.75 crore on Railway Infrastructure Package. We note that the total Railway Infrastructure Package cost*

approved by the Board works out to Rs.712.14 crore (Rs.559.38 crore + Rs.152.75 crore) ***out of which the Petitioner has capitalized and claimed Rs.28.13 crore (Rs.24.13 crore + Rs.4.49 crore of IDC) during 2015-16*** *which has not been allowed (as discussed in earlier part of this order) as the Railway Package could not be put to use during 2015-16."*

[***Emphasis Supplied***]

81. Accordingly, the Petitioner requests the Hon'ble Commission to allow the additional capital expenditure of Rs. 55799.78 lakh (Rs. 56884.71 lakh as per books less Rs. 1084.94 lakh cost of funding inbuilt in Capex) in FY 2021-22 as per Auditor Certificate and Rs. 52.79 lakh in FY 2022-23 incurred towards hard cost and IDC of Rs. 18391.61 lakh in FY 2021-22 which includes IDC of Rs. 9384.70 lakh as per books and normative IDC of Rs. 9006.91 lakh for Railway Siding under Regulation 25(1)(a) of the Tariff Regulations 2019.

v. Laboratory Instruments

82. The Petitioner submits that the scheme for laboratory Instruments was approved by the Hon'ble Commission in the Tariff Order dated 08.01.2022 with the approved cost of Rs. 154.03 Lakh under regulation 25 (2)(c) of Tariff Regulations 2019 and the aforesaid scheme was duly carried out and executed with an insignificant escalation from the approved cost. Since such minor deviations are inevitable in such schemes the Hon'ble Commission is requested to allow the aforesaid scheme with the actual expenditure of Rs. 155.83 lakh against the approved cost of Rs. 154.03 lakh.

vi. MAX DCS Version upgradation (XP) UNIT 2

83. The Petitioner humbly submits that the Hon'ble Commission *vide* Order dated 08.01.2022 in Petition No. 408/GT/2020 had allowed additional capital expenditure of Rs. 450 lakh during FY 2019-20 towards the MAX DCS Version upgradation (XP) for Unit 2 Platform under Regulations 25(2)© and 25(2)(d) of

MAITHON POWER LIMITED

the Tariff Regulations 2019. It is submitted that the Digital Control System (DCS) is the automated intelligence of any thermal power generating station running on the Windows XP operating system.

84. The Windows XP operating system was the most popular and reliable Windows platform provided by all the leading industrial automation companies for their control system. However, from 08.04.2014, Microsoft has completely withdrawn the support for Windows XP Operating System. With the end of the support by Microsoft for Windows XP operating system, it also stopped developing Security Patches for Windows XP, non-security hot fixes, online technical content updates and telephone support. Hence, the operating system became more vulnerable to malware attacks and subsequently became outdated.

85. The Petitioner managed the system with existing inventories and support from BHEL until mid-2016. However, after that, BHEL expressed its inability to provide further support and recommended a complete upgradation of the existing DCS to a higher version of the Windows operating system with an upgraded version of MAX DNA DCS for the Petitioner's Units to ensure continued services and necessary spares.

86. The scheme is approved by the Hon'ble Commission and the Petitioner has been able to manage the upgrade to Windows 7 within the approved budget. Accordingly, the Petitioner humbly requests the 'on'ble Commission to allow the additional capital expenditure of Rs. 440.31 lakh in FY 2019-20 under Regulation 25(2)(c) and 25(2)(d) of the Tariff Regulations 2019.

vii. Replacement of Battery

87. The Petitioner humbly submits that the Hon'ble Commission *vide* order dated 08.01.2022 (Para 241) had allowed additional capital expenditure of Rs. 80 lakh

during FY 2020-21, Rs. 80 lakh during FY 2021-22 and Rs. 90 lakh in FY 2022-23 towards the Replacement of Battery under Regulation 25(2)(a) of the Tariff Regulations 2019. The approved replacement of the balance of plant batteries (BOP) undertaken are as follows-

(a) 2 nos banks of 220V 600AH coal handling plant,
(b) 2 nos banks of 220V 800AH Switchyard control room,
(c) 2 nos banks of 220V 250AH AHP,
(d) 2 nos banks of 220V 250AH plant water system,
(e) 2 nos banks of 220V 100AH main silo area,
(f) 2 nos banks of 220V 100AH Raw water pump,
(g) 48V 500AH Switchyard control room

88. The Petitioner humbly submits that the cost estimation submitted for the approval did not envisage for the replacement of one bank of 220V 100 AH CHP UPS batteries and it was later discovered during the testing that the 220V UPS batteries and 4 numbers of station batteries (Unit 1 and Unit 2) that there was further deterioration in the performance. Therefore, along with approved BOP batteries, order for UPS batteries was also in placed on OEM. The cost of actual procurement was Rs. 450 Lakh against approval of Rs. 250 Lakh, which is mainly due to increase in cost of lead and addition of UPS Batteries.

89. It was also noted that Unit batteries (4 banks of 220V, 2x1500 AH) and station batteries (4 banks of 220V, 2000 AH) were also underperforming and needed replacement owing to the technical wear and tear over the time, which the Petitioner could not apprehend during the estimation of the cost in the Tariff Petition filed on 30.01.2020. Since Unit Batteries needed immediate replacement they have been procured in FY 2023-24 and Station Batteries, which have also deteriorated, are being proposed to be procured in next Tariff Period in 2024-29.

Accordingly, the following table shows the actual and approved cost of batteries in period 2019-24.

Battery Replacement details	Approved Capex for 2019-24 In (Rs. Lakh)	Actual Expenditure in (Rs. Lakh)			
		2021-22	2022-23	2023-24	Total
Replacement of approved BOP batteries [CHP (220 V DC), Switchyard 220 V DC, RWPH 220VDC, AHP IM silo 220 V DC, CWPH, Switchyard 48V, Plant Water System]	250	113.23	159.59	127.70	400.53
UPS Batteries	-	-	-	45.16	45.16
Replacement of Unit 1 & 2 battery 8 sets	0	130.72	536.84	239.59	907.15
Total	250	243.95	696.43	412.44	1352.83

90. As per letter dated 09.09.2019 by the OEM of these battery sets, the serviceable life of these batteries under normal usage is 8 to 10 years. Further, vide letters dated 11.12.2020, 15.12.2020 and 09.07.2022, the OEM has also certified that the Unit batteries and UPS batteries have become obsolete. The relevant extracts of OEM recommendations dated 09.09.2019, 11.12.2020, 15.12.2020 and 09.07.2022 are mentioned below :

> ***Excerpts from Report on Health Survey of Battery Banks:***
> ***Letter dated: 11.12.2020 (Unit 2 batteries)***
> *"Recommendation: Condition of the Battery is alarming and under present condition, it will not be possible to revive the Battery Bank, hence should be replaced by a new one."*
> ***Letter dated: 15.12.2020 (Unit 1 batteries)***
> *"Recommendation: As an immediate precautionary measure Overhauling of the Battery Bank should be carried out, however considering the condition of*

MAITHON POWER LIMITED

Battery Bank replacement of the same by a new one in the near future is required to achieve a trouble free service ."

Letter dated: 09.07.2022 (CHP UPS batteries)

"Recommendation: The Battery Bank has completed its normal Service life. Present condition of the Battery Bank is alarming and under present condition it will not be possible to revive the Battery Bank. Hence should be replaced by a new one at the earliest."

Excerpts from life Recommendation Letter:

Letter dated: 09.09.2019 (Life of batteries)

"life of tubular battery manufactured by Exide is 8-10 years under normal float application under 27 Degree Celsius temperature ."

[***Emphasis Supplied***]

True copies of the OEM letters dated 09.09.2019, 11.12.2020, 15.12.2020 and 09.07.2022 certifying the end of life/ obsolescence of the batteries are annexed herewith and marked as **ANNEXURE P/9 (COLLY).**

91. In this context, the execution of the aforesaid scheme was inevitable and necessary for the overall plant reliability leading to increase in the number of the batteries replaced with new ones coupled with the increase in the cost of Lead used in batteries had a cumulative effect of increased cost from the approved cost of Rs. 250 lakh to Rs. 1352.83 lakh. In the light of the above circumstances the cost increase was beyond the control of the Petitioner. Therefore, the Petitioner request the Hon'ble Commission to allow the Additional Capital Expenditure for Rs. 1352.83 lakh under Regulation 25(2)(a) of Tariff Regulations 2019.

viii. Upgradation of CHP Main PLC:

92. The Petitioner respectfully submits that the Hon'ble Commission, in its order dated 08.01.2022, had approved additional capital expenditure of Rs. 60 lakh for FY 2020-21 towards the upgradation of the CHP Main PLC under Regulation 25(2)(c) of the Tariff Regulations 2019. It is further submitted that in Petition No. 408/GT/2020, the Petitioner had planned for the upgradation of the CHP PLC

MAITHON POWER LIMITED

without considering the upgradation of the Stacker Reclaimer PLC. However, during the execution of the scheme, the Petitioner encountered a technical constraint wherein the new version of the CHP PLC was found to be incompatible with the existing Stacker Reclaimer PLC.

93. Since the Stacker Reclaimer is an integral part of the CHP system and cannot operate in a standalone mode, it was deemed essential, from the perspective of reliable operation and safety, to upgrade the Stacker Reclaimer PLC along with the CHP PLC. This resulted in an additional expenditure of Rs. 63.59 lakh.

A true copy of Certificate of Obsolescence dated 05.09.2019 from the OEM for the CHP PLC upgradation is annexed herewith and marked as **ANNEXURE P/10-A**. A true copy of the Compatibility Certificate dated 15.12.2021 for the Stacker Reclaimer PLC upgradation is annexed herewith and marked as **ANNEXURE P/10-B.**

94. It is also submitted that Regulation 7 and Regulation 51 of IEGC Regulations, 2023 explicitly mandate that all users shall comply with the applicable Regulations including the CEA (Cyber Security in Power Sector) Guidelines, 2021 ("**CEA Cyber Security Guidelines, 2021**") dated 07.10.2021 [***Refer: Annexure P/17***]. Further, CEA Guidelines, 2021 in its Article 7 clearly mandate the Responsible Entity to ensure that its IT technologies in the Power System Equipment/System have the ability to be upgraded and those nearing end of life or left without support from OEM should be replaced. The relevant regulation is presented below for reference-

> *"Article 7 Phasing out of Legacy System*
>
> *(a) As the life cycle of the Power System Equipment/System is longer than that of IT Systems deployed therein, the Responsible Entity shall ensure that all IT technologies in the Power System Equipment/System should have the ability to be upgraded.*
>
> *(b) The Responsible Entity shall ensure that the Information Security*

MAITHON POWER LIMITED

Division shall draw the list of all communicable equipments/systems nearing end life or are left without support from OEM. Thereafter CISO shall identify equipment/systems to be phased out from the list drawn, firm up their replacement plan and put up the replacement plan for approval before the Board of Directors".

95. In light of the above, the technical constraint was beyond the Petitioner's control, and the ancillary cost was incurred to effectively execute the scheme. Therefore, the Petitioner humbly requests the Hon'ble Commission to approve the additional capital expenditure of Rs. 123.59 lakh under Regulation 25(2)(c) of the Tariff Regulations 2019.

ix. DM Plant and Raw Water PLC upgradation

96. The Petitioner humbly submits that the Hon'ble Commission *vide* order dated 08.01.2022 in Petition No. 408/GT/2020 had allowed additional capital expenditure of Rs. 100 lakh (Rs. 50 lakh during FY 2020-21 towards the Upgradation of DMP PLC and Rs. 50 lakh during FY 2020-21 towards the Upgradation of Raw Water PLC under Regulation 25(2)(c) of the Tariff Regulations 2019. It is submitted that the scheme has been completed within the approved additional capital expenditure with no cost escalation. A true copy of the Letter of obsolescence from OEM is attached herewith and marked as **ANNEXURE P/11**.

97. It is also relevant to note that Regulation 7 and Regulation 51 of IEGC Regulations, 2023 explicitly mandate that all users shall comply with the applicable Regulations including the CEA Cyber Security Guidelines, 2021 dated 07.10.2021 [***Refer: Annexure P/17***]. Further, CEA Guidelines, 2021 in its Article 7 clearly mandate the Responsible Entity to ensure that its IT technologies in the Power System Equipment/System have the ability to be upgraded and those nearing end

of life or left without support from OEM should be replaced. The relevant regulation is presented below for reference -

"Article 7 Phasing out of Legacy System

(a) As the life cycle of the Power System Equipment/System is longer than that of IT Systems deployed therein, the Responsible Entity shall ensure that all IT technologies in the Power System Equipment/System should have the ability to be upgraded.

(b) The Responsible Entity shall ensure that the Information Security Division shall draw the list of all communicable equipments/systems nearing end life or are left without support from OEM. Thereafter CISO shall identify equipment/systems to be phased out from the list drawn, firm up their replacement plan and put up the replacement plan for approval before the Board of Directors".

"

98. Accordingly, the Petitioner humbly requests the Hon'ble Commission to allow the additional capital expenditure of Rs. 76.14 lakh (Rs. 68.48 Lakh in FY 2022-23 and Rs. 7.66 Lakh in FY 2023-24) under Regulation 25(2)(c) of the Tariff Regulations 2019.

x. Augmentation of Ash Handling Plant

99. The Petitioner humbly submits that the Hon'ble Commission *vide* order dated 08.01.2022 in Petition No. 408/GT/2020 had allowed additional capital expenditure of Rs 1917 Lakh i.e. Rs. 1417 lakh during FY 2019-20 and Rs. 500 lakh during FY 2020-21 towards the Augmentation of Ash Handling System under Regulation 26(1)(a) of Tariff Regulations 2019. However, in Review Petition No. 04/RP/2022, the Petitioner had submitted that the applicable Regulations were Regulation 25(1)(a) and 25(2)(b) of the Tariff Regulations 2019 and Hon'ble Commission in interim order dated 26.05.2022 granted liberty to the Petitioner to claim the same at the time of true-up. It is submitted that the scheme has been completed at Rs. 1893.57 Lakh within the approved additional capital expenditure with no cost escalation.

100. Accordingly, the Petitioner humbly requests the Hon'ble Commission to allow the additional capital expenditure of Rs. 1893.57 lakh (Rs. 633.04 Lakh, Rs. 285.93 Lakh, Rs. 543.64 Lakh, Rs. 305.30 Lakh and Rs. 125.66 Lakh respectively in each financial year of 2019-24 period) under Regulation 25(1)(a) and 25(2)(b) of the Tariff Regulations 2019.

xi. Centrifugal Compressors and Motor for BTG

101. The Petitioner humbly submits that the Commission *vide* order dated 08.01.2022 in Petition No. 408/GT/2020 had allowed additional capital expenditure of of Rs. 350.00 lakh during FY 2020-21 and Rs. 400.00 lakh during FY 2021-22 towards replacement of Centrifugal Compressors for BTG under Regulation 25(2)(c) of Tariff Regulations 2019. The relevant extract of the order is as follows:

> *"191....*
>
> *However, after examining the justifications furnished by the Petitioner, it is observed that in case of Centrifugal Compressor & motor for Boiler Turbine Generator and Centrifugal Compressors for Ash Plant, the OEM has suggested the replacement owing to the obsolescence/ unavailability of spares/ service support by OEM. In view of this, the projected additional capitalization of Rs.750.00 lakh (Rs.350.00 lakh in 2020-21 and Rs.400.00 lakh in 2021-22) for Centrifugal Compressor & motor for Boiler Turbine Generator and Rs.1200.00 lakh (Rs.300 lakh during each year from 2020-24) is allowed under Regulation 25(2)(c) of the 2019 Tariff Regulations. The Petitioner is however, directed to furnish the recommendations of OEM at the time of truing-up of tariff."*

102. The Petitioner states that the order for the BTG compressor was placed on channel partner of a new OEM in FY 2022-23 with delivery schedule for FY 2024-25. All the engineering documents and specifications were passed to the bidder before order finalization and, after receiving their acceptance, formal order was placed. But in due course of time, it has been observed that the vendor was not able to comply with the accepted specification and sought multiple deviation points and

associated extension in executing the order. A copy of the latest email communication dated 08.06.2022 from the supplier regarding the delivery delay is annexed herewith and marked as **ANNEXURE P/12-A** .

103. Due to this gross deviation from the engineered specifications, matter has been escalated to their management level but they expressed their inability to execute this order in its original form and content. In such condition, the order could not be completed in due time. Now re-bidding is required to be done to execute the project at the earliest. Further, as required by the Hon'ble Commission, the supporting document to demonstrate the obsolescence or unavailability of spare parts and service support of screw compressors have been annexed herewith and marked as **ANNEXURE P/12-B**.

104. Since the initial price was estimated in 2019, Petitioner is requesting for raising the total expenditure to Rs. 1000 Lakh in FY 2026-27. Accordingly, the Petitioner has provided the expenditure in 2024-29 period

105. Accordingly, the Petitioner in not claiming any expenditure during 2019-24 as the same has been shifted to FY 2025-26.

xii. Centrifugal Compressors for Ash Plant

106. The Petitioner humbly submits that the Commission vide order dated 08.01.2022 in Petition No. 408/GT/2020 had allowed additional capital expenditure of Rs. 300 lakh during FY 2020-21, Rs. 300 lakh during FY 2021-22, Rs. 300 lakh during FY 2021-22, Rs. 300 lakh during FY 2022-23 and Rs. 300 lakh during FY 2023-24 towards 4 Centrifugal Compressors for Ash Plant under Regulation 25(2)(c) of Tariff Regulations 2019. The relevant extract of the order is as follows:

"191....

However, after examining the justifications furnished by the Petitioner, it is observed that in case of Centrifugal Compressor &

motor for Boiler Turbine Generator and Centrifugal Compressors for Ash Plant, the OEM has suggested the replacement owing to the obsolescence/ unavailability of spares/ service support by OEM. In view of this, the projected additional capitalization of Rs.750.00 lakh (Rs.350.00 lakh in 2020-21 and Rs.400.00 lakh in 2021-22) for Centrifugal Compressor & motor for Boiler Turbine Generator and Rs.1200.00 lakh (Rs.300 lakh during each year from 2020-24) is allowed under Regulation 25(2)(c) of the 2019 Tariff Regulations. The Petitioner is however, directed to furnish the recommendations of OEM at the time of truing-up of tariff."

107. It is submitted that the Petitioner had installed total 14 nos of screw compressors for Ash handling Plant ("**AHP**"), which were planned to be replaced in phased manner. In terms of the above approval, the Petitioner has placed the order for replacement of 6 nos. of screw compressors with 4 centrifugal air compressors on 08.06.2024, which will be installed in 2025-26. Replacement of balance 8 screw compressors with equivalent 4 centrifugal air compressors is being proposed during 2024-29.

108. It is submitted that the Petitioner followed competitive bidding process for selection of vendor. However, there was delay in finalization of the Bid Documents due to modifications done based on vendors' feedback. Further, during specification finalization, most of the prospective bidders could not meet the required air discharge capacity per compressor. As a result, there was delay in order placement.

109. Further, the Hon'ble Commission vide Tariff Order dated 08.01.2022, at Paragraph 191, had directed the Petitioner to furnish the OEM recommendations to demonstrate the obsolescence or unavailability of spare parts and service support. A copy of the OEM recommendations dated 10.01.2022 as per the directions of Hon'ble Commission are being annexed herewith and marked as **ANNEXURE P/13**.

MAITHON POWER LIMITED

110. In addition to the above, the Petitioner submits that the Centrifugal Compressors are bigger in size than that of the installed screw compressors and for the same, to make arrangement of centrifugal compressor's RCC structure/foundation was made and auxiliary units of existing compressed air system were shifted to newly made RCC structures, and hence these assets were put to use and being claimed.

111. Since this scheme of Centrifugal Compressor is proposed to be carried forward to Tariff Period 2024-29 for reasons explained above that are beyond the control of the Petitioner, (where this incidental expenditure on these structures is not being proposed) the Petitioner requests the Hon'ble Commission to approve the Additional capitalization of Rs 2.36 Lakh for FY 2022-23 and of Rs 48.43 Lakh for FY 2023-24 towards above stated incidental expenditure under Regulation 25(2)(c) of Tariff Regulations 2019. This expenditure is shown as "RCC Structure" in Auditor's Certificate.

112. Further, the Petitioner has shifted the expenditure on approved Centrifugal Compressors, for which order has been placed on 08.06.2024, to FY 2025-26.

xiii. ID Fan Motor with VFD Replacement

113. The Petitioner submits that Hon'ble Commission has approved Rs. 18 Crore towards ID Fan Motor with Variable Frequency Drive (VFD) under Regulation 25(2)(c) of the Tariff Regulation 2019 in the Tariff Order dated 08.01.2022. It may be noted that approval was based on the technological obsolescence, supported by the recommendation of OEM for upgradation and to address issue of present unreliability of the system. A copy of the said Obsolescence Certificate dated 10.06.2022 from the OEM is annexed herewith and marked as **ANNEXURE P/14-A**.

114. After above approval, the said scheme was awarded to the supplier on 01.03.2022

MAITHON POWER LIMITED

through competitive bidding process for supply till 31st January 2023. This was planned for installation in Unit 1 with outage planned in February 2023. As outage of each unit of Petitioner's Plant is taken in alternate years, Unit 2 VFD installation was planned in 2024 outage.

115. It may also be noted that post the actual bid process the actual cost discovered was Rs. 2451.55 Lakh against approved cost of Rs 1800 Lakh with details as hereinunder and, hence, cost escalation was beyond the control of Petitioner -:

Sr No	Description	Cost (Rs. Lakh)	Cost (Rs. Lakh)
1	Drive cost all 4 Drives (8 Channels) with Mandatory spares	1744	2057
2	Expert services	32.70	38.58
3	News paper advertisement	0.86	1.01
4	Misc Cable and other	9.16	11.35
5	Commissioning of LCI charges Unit 1 & 2	90.40	106.67
6	Control and monitoring from control room charges	200.00	236.00
	Total	2077.12	2451.55

116. However, on 15.11.2022 the supplier issued a letter to the Petitioner which stated that due to external factors like war impact is beyond the control of the suppliers the delivery of the drive would not be completed in original timeframe and the corresponding works have to be deferred by 150 days i.e. by June 2023. After lot of persuasion, by its email dated 02.01.2023, the supplier updated its request for extension to April 2023. However, by this new date the actual outage period during February 2023 for Unit 1 was over and installation was pushed to next outage of Unit 2 planned in 2024 and in 2025 for Unit 1. The actual supplies were made in June and August 2023. As Unit 2 outage was taken in February 2022, next

MAITHON POWER LIMITED

outage could be taken only after 2 years i.e. March 2024 onwards. Copies of communications from the supplier regarding delivery challenges are annexed hereto and marked as **ANNEXURE P/14-B (COLLY)**.

117. Since, the beneficiaries do not agree to outages from February to June due to high demand, it could be planned only from July 2024 onwards. The MoM dated 27.10.2022 with one of the beneficiaries in this regard specifically records that from next financial year onwards, the overhauling of the units shall be completed within the month of January as February to June are very high demand months. Further, CEA referring to the review meeting chaired by Hon'ble Minister of Power & NRE on 07.11.2023 to meet the power demand during November 2023 to June 2024 directed that *"(ii) No planned maintenance during March 2024 to May 2024"*. The Petitioner, therefore, could not plan shutdown of Unit 2 from February to June 2024. Copies of MoM dated 27.10.2022 and CEA direction on meeting dated 07.11.2023 are annexed hereto and marked as **ANNEXURE P/14-C (COLLY)**.

118. As per directions of Hon'ble Commission in Order dated 16.12.2022 in Petition No. 606/MP/2020, the Petitioner carried out re-bidding of its De-NOx system which was to be commissioned by 04.02.2025 for Unit 2 and by 31.12.2025 for Unit 1 by the successful bidder. The relevant extract of the order is as follows:

> *"As the hard cost of NOx control system claimed by the Petitioner is much higher, we are not inclined to approve the same at this stage. The Petitioner is directed to adopt prudent methods of transparent competitive bidding and arrive at more economical and reasonable capital/hard cost of the NOx control system in the interest of beneficiaries and the consumers".*

119. Since De-NOx installation for Unit 2 necessarily required shutdown around December 2024-January 2025, separate shutdown for installation of VFD was not taken during July to November 2024 as two shutdowns of Unit 2 in the same year would neither be economical nor agreed by beneficiaries. It was, therefore,

planned to be commissioned along with De-NOx shutdown. The installation of VFD for Unit 2 was therefore, done in the shutdown of November-December 2024. Unit 1 installation shall, therefore, take place in next shutdown in 2025.

120. In the above context, the time overrun and cost overrun are due to the factors which are beyond the control of the Petitioner.

121. It is estimated that the Capital expenditure required for procurement and commissioning of this equipment is Rs. 2451.55 lakh through an open tendering process and it will be executed in FY 2024-25 (Rs 1200 lakh) and FY 2025-26 (Rs. 1251.55 lakh). Accordingly, this expenditure is being claimed in the period 2024-29 and no expenditure is being claimed in 2019-24.

xiv. Spare GT

122. Spare GT was approved in True-up of 2014-19 in Tariff Order dated 08.01.2022. There is minor reversal of Rs. 7.74 lakh in FY 2019-20, which is proposed to be adjusted from asset base.

B.II.A. b. New Additional Capital Expenditure

i. Infrastructure - Admin

123. The Petitioner submits that the guest house infrastructure, categorized under minor assets, plays a crucial role in the smooth functioning and management of the power plant. An expenditure of Rs. 147.30 lakh was incurred during the tariff period 2019–24 for its upkeep and maintenance. However, the Hon'ble Commission disallowed this expenditure in the Tariff Order dated 08.01.2022 on the grounds that it was minor in nature and lacked a direct connection to the generating station's operations.

124. Aggrieved by this disallowance, the Petitioner filed a Review Petition, which was dismissed by the Hon'ble Commission through its Order dated 26.05.2022.

Consequently, the Petitioner filed Appeal No. 12 of 2023 before the Hon'ble Tribunal *inter alia*, challenging this disallowance, which is pending adjudication.

125. The Petitioner respectfully submits that the expenditure incurred is essential for maintaining and preserving the assets created under the original scope of the project as it is not being claimed or allowed elsewhere.

126. In view of the above, the Petitioner requests the Hon'ble Commission to approve the additional capital expenditure of Rs. 147.30 lakh under Regulation 25(2)(a) and Regulation 76 of the CERC Tariff Regulations 2019. Further, the Petitioner shall withdraw this issue from the Appeal No. 12 of 2023 upon approval of this claim by the Hon'ble Commission.

ii. Infrastructure - IT

127. The Petitioner submits that this scheme is grouped under minor assets and are important for power plant and significant cost of Rs 189.24 Lakh was incurred as expenditure in the Tariff Period 2019-24. However, the aforesaid scheme was disallowed by the Hon'ble Commission in the Tariff Order dated 08.01.2022 on two accounts that is being minor in nature and no relation with the operations to the generating station.

128. The Petitioner being aggrieved by the disallowance filed a review which was dismissed vide Order dated 24.02.2022 and subsequently filed an Appeal No. 12 of 2023 before Hon'ble Tribunal, which is pending adjudication.

129. It is also relevant to note that Regulation 7 and Regulation 51 of IEGC Regulations, 2023 explicitly mandate that all users shall comply with the applicable Regulations including the CEA Cyber Security Guidelines, 2021 [***Refer: Annexure P/17***]. Further, CEA Guidelines, 2021 in its Article 7 clearly mandate the Responsible Entity to ensure that its IT technologies in the Power System

MAITHON POWER LIMITED

Equipment/System have the ability to be upgraded and systems nearing end of life should be replaced. The relevant regulation is presented below for reference -

> *"Article 7 Phasing out of Legacy System*
> *(a) As the life cycle of the Power System Equipment/System is longer than that of IT Systems deployed therein, the Responsible Entity shall ensure that all IT technologies in the Power System Equipment/System should have the ability to be upgraded.*
> *(b) The Responsible Entity shall ensure that the Information Security Division shall draw the list of all communicable equipments/systems nearing end life or are left without support from OEM. Thereafter CISO shall identify equipment/systems to be phased out from the list drawn, firm up their replacement plan and put up the replacement plan for approval before the Board of Directors. "*

130. The additional capital expenditure includes new laptops, desktops and printers, tailored to meet the specific technical requirements of the departments and according to the Petitioner's Policy for robust cyber security. Therefore, the Petitioner requests that the Hon'ble Commission approve the aforesaid additional capital expenditure of Rs 189.24 Lakh for 2019-24 under Regulation 25(2)(a) and Regulation 76 of the Tariff Regulations 2019. Thus, this expenditure is essential for successful and efficient running of the plant and is not being claimed/allowed elsewhere.

131. It is further submitted that the Petitioner shall withdraw this issue from the Appeal No. 12 of 2023 upon approval of this claim by the Hon'ble Commission.

iii. Dust Suppression system

132. The Petitioner humbly submits that an Ash Pond is basically a polluting zone and has been causing the spread of fugitive dust to the surroundings of the ash pond area, thereby deteriorating the Ambient Air Quality Index ("**AAQI**") of the nearby villages, particularly during the dry season. This issue has been a frequent complaint from local villagers, especially in the afternoon. Due to frequent local agitation and after evaluating other options, dust suppression system was opted.

A copy of Notification dated 18.11.2009 relating to AAQI standard requirement issued by CPCB is annexed herewith and marked as **ANNEXURE P/15**.

133. Further, MoEF&CC team in its report given in FY 2015-16 has recommended as follows "*Project should implement suitable measures to reduce the emissions from the place where fly ash is removed from the ash pond and transported through trucks to abandoned mines site. The water sprinkling arrangement at the evacuation site should be made immediately*".

134. In order to meet the AAQI Standard at all times, the Petitioner implemented the Ash Pond Dust Suppression System at the ash pond area to manage fly ash primarily in dry mode (with a provision for wet disposal) and bottom ash in wet mode using either lean slurry disposal or disposal through hydrobins. To address the problem of fugitive emissions from ash, it was proposed to install a water sprinkling arrangement/dust suppression system in the ash pond. Each sprinkler will cover a 45-meter projectile radius, with 18 fixed sprinklers and 18 branch sprinklers installed.

135. In view of the above requirement and considering environmental cleanliness, the Petitioner humbly requests that the Hon'ble Commission to approve the additional capital expenditure of Rs. 40.92 lakh incurred towards the said work spread during 2019-24 under Regulation 25(1)(b) of the Tariff Regulations 2019.

iv. SWAS Silica Analyzer Upgradation

136. The Petitioner respectfully submits that the silica analyzer system, along with its associated instrument packages, was supplied by M/s HACH Service Plus. This system is a continuous reading, wet-chemical, colorimetric analyzer designed to measure silica concentration in water within a range of 0 to 5,000 micrograms per liter (µg/L or ppb) silica (SiO2). The silica analyzer features a programmable, fully

MAITHON POWER LIMITED

automatic calibration system to ensure continuous accuracy and reliability. Its primary function is to measure and display process parameters at the Workstation, which is critical for monitoring and maintaining plant efficiency.

137. However, over time, issues such as silica deposition, obsolescence of spare parts, and non-availability of service support for the existing silica analyzer have severely impacted its functionality. Based on these challenges, the OEM, M/s HACH Service Plus, recommended the upgradation of the silica analyzer to ensure the continued availability, reliability and accuracy of the control system. A copy of OEM's recommendation dated 13.06.2018 is annexed herewith and marked as **ANNEXURE P/16**.

138. In compliance with the OEM's recommendations, the Petitioner undertook the upgradation of the silica analyzer to maintain the reliability of the control system and ensure the plant's ability to meet generation requirements as per schedule. This upgradation was essential for preventing operational disruptions caused by inaccurate or unavailable silica measurements.

139. It is respectfully submitted that the Petitioner incurred a total expenditure of Rs. 49.98 lakh for the upgradation, comprising Rs. 28.39 lakh in FY 2022-23 and Rs. 21.59 lakh in FY 2023-24. In view of the above, the Petitioner humbly requests the Hon'ble Commission to approve the said expenditure as additional capital expenditure under Regulation 25(2)(c) of the Tariff Regulations, 2019.

v. Unified PI System

140. It is submitted that CEA by its Guidelines viz. 'Cyber Security in Power Sector Guidelines, 2021' on enhanced cyber security for the generating stations mandates phasing out of legacy system. It may be noted that said guidelines have been issued under Central Electricity Authority (Technical Standards for

Connectivity to the Grid) Regulations, 2019 and, hence, have force of law.

141. Accordingly, the Petitioner had incurred expenditure to enhance the cyber security for existing system with a view to address the issues of upgradation of hardware, disparate versions of operating systems at different locations, limitations in cybersecurity features and non-optimized use due to distributed nature of existing architecture/license structure, etc. and to enhance the utilization of the system by building customized solutions and incorporating latest tools, features and facilities used for various data monitoring, calculations and MIS purposes and also provide data to third party enterprise solutions installed such as ADORE (built on AVEVA Prism - APR system) for early detection of developing abnormalities.

142. The relevant extracts of the aforementioned CEA Guidelines 2021, communicated vide letter dated 07.10.2021 CEA-CH-13-12/4/2021-IT Division, are reproduced as follows:

> ***"Article 7 Phasing out of Legacy System***
>
> *a) As the life cycle of the Power System Equipment/System is longer than that of IT Systems deployed therein, the Responsible Entity shall ensure that all IT technologies in the Power System Equipment/System should have the ability to be upgraded.*
>
> *b) The Responsible Entity shall ensure that the Information Security Division shall draw the list of all communicable equipments/systems nearing end life or are left without support from OEM. Thereafter CISO shall identify equipment/systems to be phased out from the list drawn, firm up their replacement plan and put up the replacement plan for approval before the Board of Directors.*
>
> *c) The CISO shall ensure that till equipments/systems nearing end life or left without support from OEM are not replaced, their cyber security is hardened and ensured through additional controls provisioned in consultation with the OEM or alternate Supplier(s)*.*
>
> **e.g. Use of CDAC developed AppSamvid and whitelisting of applications installed may be explored across all legacy systems.*
>
> *d) The Responsible Entity shall document in their Cyber Security Policy*

a Standard Operating Procedure for safe and secure disposal of outlived or legacy devices."

A copy of the Cyber Security in Power Sector Guidelines, 2021 issued by CEA is annexed herewith and marked as **ANNEXURE P/17**.

143. In view of the above directions, the Petitioner has incurred Rs. 61.18 lakh (Rs. 47.97 lakh in FY 2020-21, Rs. 8.47 lakh in FY 2021-22 and Rs. 4.74 lakh during FY 2022-23) in this regard and, accordingly, requests the Hon'ble Commission to approve the same as additional capital expenditure under Regulation 25(1)(b) Tariff Regulations 2019.

vi. Upgradation of AHP PLC

144. It is submitted that the Programmable Logic Control ("**PLC**") system consists of Measurement and Closed/Open Loop Control system (CLCS & OLCS), Data bus system, Operator cum Engineer Workstation, Software including data diagnostics and data bus system with Control and Communication with the process.

145. It may be appreciated that there was a necessity to up-grade the workstations Human Machine Interface (HMI) on account of the obsolescence of technology namely Microsoft Windows XP Operating platform and withdrawal of the support for all XP based systems including automatic security updates. In absence of such support from Microsoft, the Petitioner was not able to update the critical virus definition files and, thus, made the system vulnerable for the system security.

146. Hence, the system needed up-gradation to higher version of Windows platform to ensure improved reliability and availability. HMI systems in service at site were quite old and had outlived their service life. Furthermore, some of these machines were slow in response and used to hang quite frequently. The OEM in its life cycle report strongly recommended to upgrade the obsolete portion of the system. A

MAITHON POWER LIMITED

true copy of the obsolescence certificate dated 12.05.2021 pertaining to HMI is annexed herewith and marked as **ANNEXURE P/18**.

147. Notably, AHP Main plant PLC system being heart of the Ash Handling Plant ("**AHP**"), entire operation, monitoring and control automation is achieved with the help of this PLC system. Non availability of this PLC system or any malfunction in this system would have led to non-availability of generating unit. Hence, the PLC system was upgraded as the availability of this PLC system is very important for the smooth & normal operation of the generating Unit or else there would have been reliability and availability loss.

148. It is also relevant to note that Regulation 7 and Regulation 51 of IEGC Regulations, 2023 explicitly mandate that all users shall comply with the applicable Regulations including the CEA Cyber Security Guidelines, 2021 [***Refer: Annexure P/17***]. Further, CEA Guidelines, 2021 in its Article 7 clearly mandate the Responsible Entity to ensure that its IT technologies in the Power System Equipment/System have the ability to be upgraded and to phase out legacy system. The relevant regulation is presented below for reference -

> *"Article 7 Phasing out of Legacy System*
>
> *a) As the life cycle of the Power System Equipment/System is longer than that of IT Systems deployed therein, the Responsible Entity shall ensure that all IT technologies in the Power System Equipment/System should have the ability to be upgraded.*
>
> *b) The Responsible Entity shall ensure that the Information Security Division shall draw the list of all communicable equipments/systems nearing end life or are left without support from OEM. Thereafter CISO shall identify equipment/systems to be phased out from the list drawn, firm up their replacement plan and put up the replacement plan for approval before the Board of Directors."*

149. In view of the above, the Petitioner has incurred an additional capital expenditure of Rs. 59.00 lakh in FY 2021-22 and Rs. 2.37 lakh in FY 2022-23 towards the AHP PLC Upgradation and, accordingly, requests the Hon'ble Commission to allow the

MAITHON POWER LIMITED

same under Regulation 25(2)(c) of the Tariff Regulations 2019.

vii. Upgradation of Fire PLC

150. It is humbly submitted that the existing Fire PLC system, installed in 2011, comprises GE Fanuc PLC controllers, I/O network configurations and HMI workstations operating on the now-obsolete Windows XP platform. Over the years, the system has become increasingly unreliable due to the obsolescence of the CPU IC695CPU310 module and Genius bus communication technology, which no longer have spare or repair support from the manufacturer.

151. Additionally, the HMI machines have outlived their service life and Microsoft has withdrawn support for Windows XP, making it imperative to upgrade to ensure the smooth running and availability of the Fire pumps. Accordingly, the Petitioner upgraded the system in FY 2023-24 and the upgrade includes migrating to the latest CPU with an Ethernet platform compatible with Windows 10 Professional OS, installing new HMI workstations and renewing software licenses. This upgrade was essential to avoid system breakdowns, improve reliability and ensure the healthiness of the fire system, which is crucial for the plant's operational safety and sustainability. A copy of the obsolescence certificate dated 12.05.2021 from OEM is annexed herewith and marked as **ANNEXURE P/19.**

152. The benefits derived from this upgrade are substantial and multifaceted. In this regard, it may be noted that:

(a) Firstly, the upgraded system will significantly reduce cyber security threats by utilizing the latest Windows 10 Professional OS and antivirus security software.

(b) Secondly, the transition to an Ethernet-based PLC network system will enhance data transfer speeds, thereby reducing system hanging issues and

MAITHON POWER LIMITED

improving overall efficiency.

(c) Thirdly, the reduced dependency on the OEM for service and support will mitigate risks associated with the obsolescence of the current system.

(d) In addition, the installation of a remote Engineering Workstation (EWS) terminal in the main control room will facilitate continuous monitoring of the Fire pump system, reducing the need for contract manpower and ensuring the security of critical data such as system logic and passwords. This remote monitoring capability is particularly beneficial during critical times, such as adverse weather conditions or local political issues, aligning with the requirements of the Business Continuity and Disaster Management Plan (BCDMP).

(e) Overall, the upgrade will ensure the reliable availability of the fire system, thereby safeguarding the plant's operational activities and equipment from fire emergencies and supporting the sustainable running of the generating unit.

153. It is also relevant to note that Regulation 7 and Regulation 51 of IEGC Regulations, 2023 explicitly mandate that all users shall comply with the applicable Regulations including the CEA Cyber Security Guidelines, 2021 [***Refer: Annexure P/17***]. Further, CEA Guidelines, 2021 in its Article 7 clearly mandate the Responsible Entity to ensure that its IT technologies in the Power System Equipment/System have the ability to be upgraded and legacy systems are phased out. The relevant regulation is presented below for reference -

"Article 7 Phasing out of Legacy System

a) As the life cycle of the Power System Equipment/System is longer than that of IT Systems deployed therein, the Responsible Entity shall ensure that all IT technologies in the Power System Equipment/System should have the ability to be upgraded.

MAITHON POWER LIMITED

b) *The Responsible Entity shall ensure that the Information Security Division shall draw the list of all communicable equipments/systems nearing end life or are left without support from OEM. Thereafter CISO shall identify equipment/systems to be phased out from the list drawn, firm up their replacement plan and put up the replacement plan for approval before the Board of Directors. "*

154. In view of the above, the Petitioner has incurred an additional capital expenditure of Rs. 59.47 lakh in FY 2023-24 towards the upgradation of Fire PLC and accordingly requests the Hon'ble Commission to allow the same under Regulation 25(2)(c) of the Tariff Regulations 2019.

viii. End of life (Decentralised AC System)

155. The Petitioner humbly submits that the Air Conditioning (AC) units in the remote Programmable Logic Controllable (PLC) rooms have been in service for over a decade. These rooms with AC units include the Main Silo PLC Room, Fire PLC Room, MRS PLC Room, DM Plant PLC Control Room, ZLD PLC Panel Room, ZLD PLC Control Room, ZLD UPS Room, Raw Water PLC Room, CHP ER-1 PLC Control Room, ER-2 PLC Room, ER-3 PLC Room, Stacker PLC Room, H2 Plant PLC Room, CWPH Remote I/O Panel Room, HFO Pump House Remote I/O Panel Room, Lift car room, FBT, Switchyard, Kiosk, CHP CONTROL ROOM(ER1)/ER2/ER3 PLC room. The Petitioner is having decentralized and distributed AC systems for all these rooms.

156. The Petitioner also wants to bring to the notice of the Hon'ble Commission that installing an industrial centralized Air Conditioning system was not practicably advisable because of the considerable distances between different areas and even if the same was implemented it would have been much costlier and inefficient. Accordingly, by having de-centralized AC system, instead of industrial centralized AC system, the realized cost saving benefits of much cheaper de-centralized and

MAITHON POWER LIMITED

distributed Air-Conditioning systems have already been passed on to the beneficiaries.

157. These units, which were produced more than 11 years ago, have been operating continuously, notwithstanding the fact that they were not engineered for industrial usage causing substantially deterioration in their efficiency/performance. This led to recurrent operational disruptions majorly due to PLC card failures and the units reached a state where further maintenance was infeasible.

158. Kindly refer to the following list detailing the air conditioning units installed within the facility, inclusive of their respective manufacturing dates.

Location	AC details	DATE OF MFG
ER#1/MAINTENACE ENGINEER ROOM	MPL/ER-1/171000416	MAR2009
	MPL/WB/171000430	MAR2009
	MPL/ER-1/171000415	MAR2009
ER#1/CONFRENCE ROOM	MPL/ER-1/171000414	MAR2009
	MPL/ER-1/171000413	MAR2009
CHP HEAD ROOM	MPL/ER-1/171000410	MAR2009
	MPL/ER-1/171000411	MAR2009
ER#1/SHIFT ENGINEER ROOM	MPL/ER-1/171000412	MAR2009
ER#1/CONTROL ROOM	MPL/EMD/29A	MAR2009
	MPL/EMD/25A	MAR2009

	MPL/EMD/18B	MAR2009
SR/MCC ROOM	MPL/EMD/120	MAR2009
	MPL/EMD/119A	MAR2009
	MPL/EMD/118A	MAR2009

159. While it is typically more cost-effective to extend the lifespan of existing air conditioners by refurbishment of components instead of replacement, the

reliability of the refurnished components/system is much lower than new replaced AC System. Therefore, significant problems can occur when the PLC card fails due to AC System failure.

160. It is further submitted that these Air conditioners have outlived their useful life and needed replacement for enhancing the performance of various components, including compressors, heat exchangers, expansion valves, refrigerant etc. Accordingly, the Petitioner has incurred Rs. 81.16 lakh from FY 2019-20 to FY 2023-24 in this regard and requests the Hon'ble Commission to allow the same as additional capital expenditure under Regulation 25(2)(a) and 25(2)(c) of the Tariff Regulations 2019.

ix. Water Supply Township

161. It is submitted that the Petitioner's Employee Township "Anandam" is in the DVC Colony. The said township has 96 numbers of residential units along with several common facilities such as a canteen, dispensary, power sub-station, mini grocery shop, car parking and a children's playground. The total water requirement of the township was temporarily sustained by underground boring water.

162. According to Central Ground Water Authority (CGWA) Norms [PART II- Sec. 3(ii)] 2.0 dated 24.09.2020, for drinking and domestic use in residential apartments, group housing societies or government water supply agencies in urban areas, it is mandatory to obtain NOC for ground water usage and such NOC shall be granted only if local authority (i.e. DVC) is not able to supply water. A copy of relevant extract of these Central Ground Water Authority (CGWA) Norms is reproduced as follows:

> ***"2.0***
> ***Drinking & Domestic use for Residential apartments/ Group Housing Societies/ Government water supply agencies in urban areas***

MAITHON POWER LIMITED

For grant of No Objection Certificate for ground water extraction, the project proponent has to furnish the details as per the guidelines issued by the CGWA in proper format as available in CGWA website. ***No Objection Certificate for new /existing wells shall be granted only in such cases where the local Government water supply agency is unable to supply requisite amount of water in the area.***
....."

A copy of the Central Ground Water Authority (CGWA) Norms dated 24.09.2020 is annexed herewith and marked as **ANNEXURE P/20-A**.

163. Given the stringent CGWA requirements for groundwater use, it is challenging to utilize untreated groundwater in the required quantities at the township. DVC addresses similar needs in its township through a surface water-based treated water network. Therefore, the Petitioner applied to DVC Projects and Water Supply Department for permanent water supply line from DVC's water treatment system with the applicable charges of water as per the standing commercial rates and allied terms and conditions. Copies of various correspondences exchanged with DVC regarding water supply have been attached herewith and marked as **ANNEXURE P/20-B (COLLY).**

164. Consequently, an agreement was executed on 15.05.2023 wherein DVC agreed to supply the required amount of treated water for a standard commercial charge. A true copy of the Agreement dated 15.05.2023 executed between Petitioner and DVC is attached herewith and marked as **ANNEXURE P/20-C.**

165. The recital of the aforesaid agreement requires the Petitioner to install and maintain water supply lines and system, which is extracted below:

"AND WHEREAS ***the First Party has agreed to such construction, operation and/or maintenance of the water supply scheme by the Second Party*** *and further agreed to such supply of water to the Second Party for an initial period of five years as referred to in Clause- 16 here-in-under on the terms and conditions as hereinafter appearing."*

[***Emphasis Supplied***]

166. The said scheme involved installing pumps at the DVC water treatment plant and the supply lines to pump water from the DVC plant to the Petitioner's Township which have been installed in FY 2023-24.

167. Since the expenditure under the instant scheme has been incurred to meet the CGWA requirement and to maintain environmental and operational standards at the township, the Petitioner requests the Hon'ble Commission to kindly allow the actual expense incurred of Rs. 66.41 Lakh in FY 2023-24 under Regulation 25(1)(b) of the Tariff Regulations 2019.

x. Track Hopper End Wall

168. The Petitioner respectfully submits that since the operationalization of the railway system on 10.03.2022, coal has been received through both rake and road modes, resulting in significant savings in the transportation cost (around 24 paise per unit) in FY 2023-24, which are being passed on to beneficiaries. For unloading coal from trucks/Hyvas before this date, out of 15 originally constructed track hoppers, only 13 were required to avoid excessive dust in larger area of track hopper by truck unloading (i.e., hopper number 3-15) and hopper- 1&2 were not in service. Therefore, only 1 side end wall was constructed with RCC, but other side towards unused hoppers was covered with steel plate to avoid coal spillage and dust during coal pushing in hopper number 3. As a result of this, Track Hopper capacity was reduced from 4200 MT to 3700 MT. This stop-gap arrangement was due to delay in Railway Project caused by Force Majeure reasons, which were also acknowledged by Hon'ble Commission in Order dated 08.01.2022 in Petition No. 408/GT/2020.

169. With unloading from railway wagons, the use of track Hoppers 1 & 2 possible but RCC wall at the other end was necessary to close the spillage of coal from track

hopper end. The Plate along with stiffener were required to be anchored with RCC Beam/wall of track hopper with post installed anchor. The use of Hopper 1&2 will result in increasing the capacity of hopper up to 500 MT (i.e.100% availability and utilisation of track hopper) and, hence, significantly reducing the rake unloading time. The End wall was , therefore, constructed, which will help in significantly improving the plant operation, efficiency and reliability.

170. In light of the above, the Petitioner has incurred an additional capital expenditure of Rs. 98.93 lakh in FY 2023-24 for the construction of the Track Hopper End Wall. The Petitioner respectfully requests this Hon'ble Commission to approve this expenditure under Regulation 25(1)(b) and 25(1)(e) of Tariff Regulations 2019.

xi. Flow Meter Installation (Water Meter)

171. The Petitioner humbly submits that one of the essential resources for daily electricity generation, aside from coal, is water, which is necessary for producing steam to operate turbines. Additionally, water is also used in various ancillary processes, such as the cooling water system, service water system and fire water system. The water supply for the generating station is sourced from the Maithon Dam via an intake channel and it is transported into the generating station through raw water pumps located outside the plant premises using a common pipeline. Thus, it becomes crucial to measure the intake of raw water accurately to calculate and pay the raw water charges to DVC, which was being done right from inception.

172. It is further submitted that the Section 4 of the Water (Prevention and Control of Pollution) Act, 1974 provide as follows:

> *"4. AFFIXING OF METERS*
> *(1) For the purpose of measuring and recording the quantity of water consumed, every person carrying on any 2[industry] and every local authority shall affix meters of such standards and at such places as may be prescribed, and it shall be presumed that the quantity indicated by the meter*

has been consumed by such person or local authority, as the case may be, until the contrary is proved."

173. In compliance with these provisions, a water meter was installed at the plant's intake point to provide cumulative readings of water supplied for various internal uses. The daily raw water consumption at the Petitioner's Plant is approximately 46,000 m^3. It is also important to mention that in the National Water Policy 2012 requires **mapping of water uses for different purposes** to ensure efficient use of water:

> *"5. A system to evolve **benchmarks for water uses for different purposes, i.e., water footprints, and water auditing** be developed to ensure efficient use of water. Project financing has been suggested as a tool to incentivise efficient & economic use of water."*

A copy of National Water Policy 2012 (relevant pages) is annexed herewith and marked as **ANNEXURE P/21** .

174. Further, given the global scarcity of drinking water, which poses significant health and hygiene challenges, it is imperative to optimize and control the use of surface and groundwater for non-drinking purposes to prevent wastage. As mandated by the Environmental Protection Act, 1986, every industry must submit specific water consumption reports to the CPCB and SPCB quarterly. Thus, accurate measurement of water usage for different purposes and the amount recycled is necessary to calculate specific water consumption for each purpose. Metering at multiple points was, therefore, essential for the Petitioner to comply with statutory water consumption requirements.

175. To address these needs, the Petitioner decided to monitor water usage for various purposes and measure waste water quantities to recycle as part of a circular economy approach. The goal was to reduce the intake of raw water and optimize specific water consumption per kWh of electricity produced for water consumed

MAITHON POWER LIMITED

for different purposes. Therefore, the Petitioner has installed multiple water meters throughout the plant to measure water consumption wherever applicable or needed.

176. Before September 2016, Jharkhand State Pollution Control Board(JSPCB) accepted water consumption returns in a prescribed format, where the total raw water consumption for the month was reported based on initial and final meter readings. Consumption in different categories was calculated based on theoretical ratios for allocation. The separate metering for these categories would allow the Petitioner to comply with actual consumption reporting requirement of JSPCB.

177. It is further submitted that although water meters were included in the original Project P&I diagram but the same now need to be augmented after National Water Policy 2012. Thus, on account of stricter environmental norms for conservation of water, the Petitioner has installed water flow meters at various locations and humbly requests the Hon'ble Commission to allow the total additional capital expenditure of Rs. 69.77 lakh out of which Rs. 64.45 lakh in FY 2022-23 and Rs. 5.32 lakh in FY 2023-24 under Regulation 25(1)(b) of the Tariff Regulations 2019.

xii. Track Hopper Ventilation System

178. The Petitioner humbly submits that with the commissioning of Railway system in March 2022, the coal is being received from BOBR Wagons and unloaded in the underground track hopper which was being transported through trucks/Hyvas earlier. Post crushing, the coal is either fed in bunker or conveyed for stacking as per operational requirements. The Underground facilities at Track Hopper are provided with ventilation system that replaces the contaminated indoor air with fresh air, thus, controlling the exposure due to airborne contaminants.

179. The ventilation system is required along the length of the hopper i.e. 200 meters

MAITHON POWER LIMITED

with the requirement of 4 induced and 4 exhaust fans i.e. total 8 fans. When the Run Of Mines (ROM) coal was being fed through trucks/Hyvas till March 2022, the level of fugitive dust while unloading to track hopper was much lower due to coarser ROM coal and lower quantities of coal being unloaded by trucks/Hyvas at a time. Therefore, the track hopper was provided with only 4 ventilation fans i.e. 2 induced draft and 2 exhaust fans. This was done to avoid unnecessary deterioration of fans that would not be used. Further, Track Hopper for entire length was provided only with exhaust duct, which is also partially damaged due to continuous water ingress. As stated earlier, the works were deferred due to delay in Railway System for Force Majeure reasons.

180. However, with unloading of wagons at full length of track hopper now, the dust in track hopper increased significantly due to increased quantity of coal at a time and presence of high dust in crushed coal, which is required to be controlled to meet stipulated requirement of law.

181. Keeping this condition in mind, more effective ventilation system was required in track hopper to extract the dust from underground hopper, thus, preventing the asphyxiating environment. The Petitioner has, therefore, installed 2 more induced draft fans and 2 more exhaust fans and also replaced the damaged duct in FY 2023-24.

182. Hence, the above project was necessitated to prevent condensation, reduce temperature and humidity, to ensure personnel safety from the point of view of airborne diseases and reducing asphyxiating conditions as required under section 7A of the Factories Act, 1948 which is stipulated as follows:

> ***"[7A. General duties of the occupier.—(1) Every occupier shall ensure, so far as is reasonably practicable, the health, safety and welfare of all workers while they are at work in the factory.***

(2) Without prejudice to the generality of the provisions of sub-section (1), the matters to which such duty extends, shall include—

(a) the provision and maintenance of plant and systems of work in the factory that are safe and without risks to health:

(b) the arrangements in the factory for ensuring safety and absence of risks to health in connection with the use, handling, storage and transport of articles and substances;

(c) the provisions of such information, instruction, training and supervision as are necessary to ensure the health and safety of all workers at work:

(d) the maintenance of all places of work in the factory in a condition that is safe and without risks to health and the provision and maintenance of such means of access to, and egress from, such places as are safe and without such risks;

(e) the provision, maintenance or monitoring of such working environment in the factory for the workers that is safe, without risks to health and adequate as regards facilities and arrangements for their welfare at work...."

[***Emphasis supplied***]

183. In view of the above, said work has been undertaken by the Petitioner to prevent condensation, reduce temperature and humidity and to ensure personnel safety from the point of view of airborne diseases and reducing asphyxiating conditions.

184. Accordingly, the Petitioner has incurred Rs. 204.39 lakh in FY 2023-24 in this regard and requests the Hon'ble Commission to allow the same as additional capital expenditure under Regulation 25(1)(b) and 25(1)(e) of the Tariff Regulations 2019.

xiii. Yard Sprinkling

185. It is submitted that this work has been carried out in 2014-19 tariff period and there is minor reversal of Rs. 2.96 Lakh in FY 2019-20, which may kindly be considered under Regulation 25(1)(b) in line with the expenditure towards Dust Suppression System of Ash Pond Area.

xiv. Ceramic Lining of Coal Mill

186. **The** coal received at the Petitioner's Plant contains high ash content than envisaged in FSA and, hence, high abrasive mineral species increases the erosion

propensity of coal. Due to presence of high abrasive materials, there was heavy erosion of the coal mill including its internals which has led to higher wear and tear of the coal mill pipes. This may have led to forced breakdown which would have affected the reliability and operation of the plant.

187. The fast erosion is due to poor coal quality which is beyond the control of the Petitioner. Therefore, the Petitioner has carried out ceramic Lining of Coal Mill to enhance reliability and life of Coal Mill. The Petitioner, therefore, prays to the Hon'ble Commission to admit the expenditure of Rs. 319.96 Lakh spread in FY 2022-23 and FY 2023-24 under Regulation 25(2)(a) and Regulation 25(2)(b) of the Tariff Regulations 2019.

xv. Reheater Upgradation

188. The Petitioner respectfully submits that Units 1 and 2 of the Petitioner's generating station have been operational since September 2011 and July 2012, respectively. Over the past few years, the Re-heater section of both units has experienced repeated boiler tube leakages, primarily due to poor coal quality, which is beyond the control of the Petitioner. Instances of temperature excursions in the Re-heater tubes have also been observed, where the metal temperatures exceeded the allowable limit of 600°C. During unit outages, oxide scale mapping of Re-heater coils revealed tubes with significant oxide scale thickness, indicating high metal temperatures.

189. In order to ascertain the root cause of such failures and determine corrective measures, the findings of oxide scale thickness and temperature profiles were shared with BHEL, the OEM. The Petitioner also apprised BHEL regarding the issue of high temperature difference between one thermocouple tag to another tag which is in range of 50-80 degree C for Divisional Panel, Platten Super Heater

("**PSH**") and Low Temperature Super Heater ("**LTSH**") and in the range of 115 degree C for Reheater Coil.

190. Consequent to the above discussions, the furnished details and considering the actual coal firing, BHEL recommended replacement of T22 tubes by T91 for 1st tube for all Panels immediately and main cause was attributed to coal properties as evident in MoM dated 11th and 12th November 2016. In respect of higher temperature difference between the heated and unheated part of hottest tubes of different zones, BHEL assured to revert. Relevant extract of the MoM are extracted below for ready reference.

> *"...m. In view of current observations based on operation and current coal firing (within the range of design limits),* ***BHEL recommended replacement of T22 tube by T91 for tube 1 for all Panels in Reheater rear as indicated in the sketch.***
>
> *o.* ***BHEL stated that if alarms are coming in steady state, it is by virtue of coal properties****. In view of this coal properties shall be forwarded to BHEL for further review and analysis.*
>
> *r. BHEL will revert on delta temp difference between heated and un-heated part for hottest tube of different zones (LTSH, Div Panel, PSH and RH). BHEL will revert back in 3 weeks.*

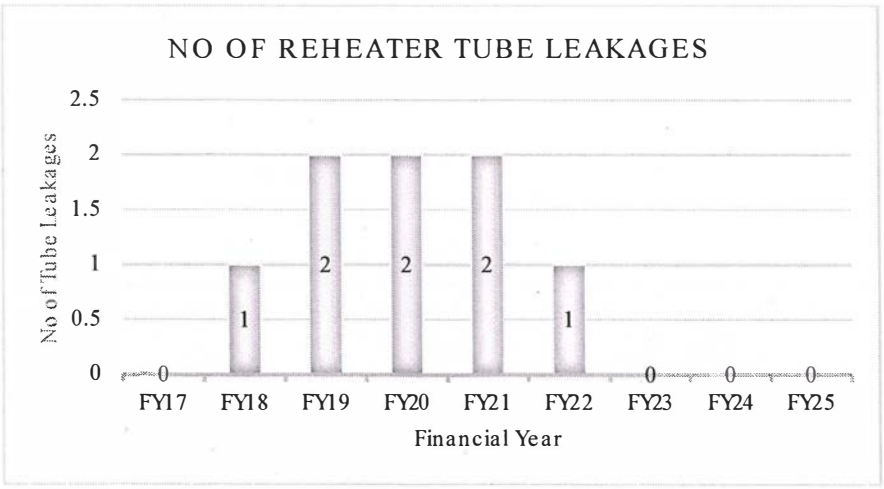
191. Following additional analysis, BHEL, in its communication dated 08.05.2018 and MoM dated 13th and 14th June 2018, identified delayed combustion due to coal quality variations and frequent load changes as the primary cause of Re-heater tube overheating. To address this, BHEL recommended upgrading the tube material from T22/T91 to SS347H, installing additional thermocouples for better monitoring and implementing other operational measures. The following extracts of the MoM quoted for reference, detail BHEL's recommendations for tube replacement and further analysis:

> *"...b.* ***BHEL stated that major root cause resulting in overheating is delayed combustion on account of Coal Characteristics and temperature excursions during start-up and load variation.*** *.....*
> ***Corrective measures****:*

". Acromat Thermocouples to be installed on 2-3 tubes of CRH Preferably tube 2 or 3 on RHS for monitoring of metal temp during start-ups and load variations.....
Up-gradation of HRH from T22/T91 to SS347H as recommended by BHEL earlier. Priority wise 23 Panels on RHS to be considered first....."

A true copy of the MoM dated 11-12.11.2016 of meeting with BHEL have been annexed herewith and marked as **ANNEXURE- P/22 A**. A true copy of MOM dated 13-14.06.2018 of meeting with BHEL is annexed herewith and marked as **ANNEXURE- P/22B.**

192. Noting the above recommendations and in order to have better monitoring and control of tube metal excursions, installation of additional Monochromatic Temperature Measurement ("**MTM**") thermocouples in Re-heater coils were undertaken over and above the existing ones immediately. In addition to the installation of thermocouples, associated items viz. Junction Boxes, Distributed Control System ("**DCS**") hardware etc., are also required to be installed. While considering the priority for upgradation as per recommendation, RHS panels have been replaced in 2019-24 and balance panels are proposed to be replaced in 2024-29. The following graph shows that against 12 boiler tube leakages from FY 2016-17 to 2020-21, the number of leakages has reduced to one during 2021-22 to 2023-24 after replacements during 2019-24:



MAITHON POWER LIMITED

193. Accordingly, due to the above-mentioned force majeure reasons upgradation was carried out in Re-heaters of both the boilers and the Petitioner has incurred an expenditure of Rs. 201.30 lakh in FY 2019-20 and Rs. 986.99 lakh in FY 2020-21, Rs. 486.57 lakh in FY 2021-22, Rs. 500.37 lakh in FY 2022-23, Rs. 505.47 lakh in FY 2023-24 and the same may be allowed by the Hon'ble Commission under Regulation 25(2)(a) and 25(2)(b) of the Tariff Regulations 2019.

xvi. ESP Internals

194. The Electrostatic Precipitator (ESP) is experiencing significant wear and tear due to the high ash content and the resulting erosion of its internal components, such as the Collecting Electrode (CE), Emitting Electrode (EE) and the rapping system. The primary issue with the Collecting Electrode (CE) is damage caused by high ash content, including deformation at the top hook, excessive bending, reduced thickness, and extensive wear in various areas.

195. These issues have decreased the CE's collection efficiency, leading to improper adhesion of ash particles. As a result, ash particles are discharged into the stack, causing emissions to exceed the designed levels. Similarly, the Emitting Electrodes (EE) have sustained damage due to the high ash content. Problems such as reduced spring stiffness, root-end damage and low back value have been identified. These issues have diminished the corona effect and the ionization capacity required for fly ash capture, leading to increased downtime for ESP fields and elevated Suspended Particulate Matter (SPM) levels. Consequently, stack emissions have risen beyond the designed levels.

196. In order to sustain the same level of efficiency so that environmental norms are not violated, periodically the worn-out, eroded, corroded and damaged components of ESP internals had to be replaced with new ones without affecting

the alignment or precision working internals. The Outage data before and after replacement is given below:

SL No	ESP Field outage	No. of field outage before replacement	No. of field outage after replacement
1	Unit-1 ESP Pass-B 1st Field	5	0
2	Unit-2 ESP Pass-C 1st Field	8	0

197. In this regard, the Petitioner has incurred capital expenditure of Rs. 293.42 lakh in FY 2021-22, Rs. 342.33 lakh in FY 2022-23 and Rs. 170.61 lakh in FY 2023-24 for ESP Internals replacement may be approved by the Hon'ble Commission under Regulations 25(1)(b) and 25(2)(a) of Tariff Regulations 2019.

xvii. ESP Wear Resist Pipes

198. Fly ash conveying system pipe are used to convey the fly ash from Electro-static Precipitator (ESP) to Ash silo Bin. Generally, the fly ash is conveyed at low velocity in a non-suspension mode, through all or part of the pipeline, it is referred to as dense phase conveying system. Air Preheater (APH) Duct and ESP ash conveying pipeline utilises the moving bed flow, in which the material is conveyed in dunes on the bottom of the pipelines. Moving bed flow is only possible in a conveying system if the fly ash to be conveyed has good air retention characteristics. This type of flow arrangement is limited to very finely powdered materials having a mean particle size in the range of approximately 40 – 70 µm. The flow also depends on particle size distribution, particle shape and with increase in wear of pipes all these factors cause not only lowering the ash disposal rate but also frequent pipe leakages which need to be plugged.

199. Low ash disposal rate due to high ash content in coal would increase the ash level

in the ESP raising the ash level in the hopper; creating a short in the ESP field leading to high stack emission and ultimately environmental pollution. Since Bulk density of the fly ash is very high and can damage the ESP internals, the rectification of the damaged ESP internals would require a shutdown. This would also be increasing the cost incurred towards procurement and replacement of collecting electrodes along with necessary internal parts of ESP. In order to increase the ash disposal rate due to high wear of existing MS pipes, the Petitioner has installed ESP wear resist pipes in a phased manner.

200. The ESP Wear Resist pipe has been procured and put to use by the Petitioner and the expenditure incurred towards the same is Rs. 108.93 lakh in FY 2021-22, Rs. 38.41 lakh in FY 2022-23 and Rs. 2.52 lakh in FY 2023-24. In view thereof, the Hon'ble Commission is requested to approve this expenditure under Regulation 25(1)(b) and 25(2)(a) of Tariff Regulations, 2019.

xviii. Fabric Expansion Bellows

201. It is submitted that the proportion of coarse ash particles is almost double the designed ash particle size distribution. This ash, carried along with the flue gas through the flue gas ducts as fly ash, has resulted in significant operational challenges. The higher volume and coarser ash particles in the flue gas have caused severe erosion to the duct and bellows while flowing through the ducts. This erosion has led to exposure of most of the duct and bellow sections to the atmosphere, resulting in air ingress and critically impacting the performance and efficiency of the Induced Draft ("**ID**") fans. Such operational issues directly affect the safety, reliability and efficiency of plant operations.

202. In order to address and contain this issue, which arose due to coal quality being beyond the control of the Petitioner, it was imperative to take immediate

corrective measures. To mitigate the problem, the Petitioner decided to cover the entire expansion bellows section with fabric expansion cloth, which is designed to withstand harsh operational conditions and prevent further erosion and air ingress. This measure was essential to ensure the continued reliability and efficiency of plant operations. Consequently, a capital expenditure of Rs. 86.96 lakh was incurred during the period 2019–24, which may be allowed under Regulation 25(2)(a), 25(2)(b) and 76 of Tariff Regulations 2019.

203. The incurrence of this additional capital expenditure was unavoidable and essential to maintain the safe and efficient operation of the plant, mitigate the adverse effects of coal quality and ensure compliance with operational and environmental standards. The fabric expansion cloth provides a sustainable and technically sound solution to prevent further damage to the ducts and bellows. Therefore, this Hon'ble Commission may be pleased to allow the expenses incurred under this head.

xix. Fire Hydrant System

204. The Petitioner humbly submits that the fire lines, which were installed underground and protected with a wrapping coating, particularly in the BTG, BOP and CHP area, are covered with a 100 MM RCC floor. These were complaint with IS 13039: 1991, Indian Standard External Hydrant System Provision And Maintenance Code of Practice Clause 6.1, which allowed both stand post type and underground type fire hydrants and is reproduced below:

> *"6.1*
> *Fire hydrants, namely, stand post type, con-- forming to IS 908 : 1975 and underground type conforming to IS 909 : 1975 should be provided. For use in industrial establishment, only stand post type hydrants should be provided".*

205. These underground fire lines in the BTG areas are more than a decade old and

have corroded over time. This corrosion has led to frequent leakages from the underground Fire Water lines. During periods of breakdown, these fire lines are isolated for extended durations, posing a threat to the generating station.

206. Given the condition of the underground pipes, the associated risks and the frequent occurrence of leakages, the Petitioner has decided to relocate the Fire hydrant line from underground to above ground in the BTG area and other areas in a phased manner. As previously mentioned, leakages have increased in the BTG, BOP and CHP areas. Consequently, the Main Pumps operate continuously instead of the Jockey pump, leading to further deterioration of the Fire lines and increase in risk of fire control.

207. Addressing these leakages necessitates the breaking of concrete, including excavations, which restricts movement in the affected area. Periodic maintenance and thickness monitoring of the underground pipes are also not feasible. During these breakdown periods, the fire lines require isolation for extended durations, which ultimately puts the plant at risk.

208. The inaccessibility of underground system also hinders regular inspections, which are required as per IS 13039 Clause 7.2, which is reproduced below:

> *"7.2*
> ***Each hydrant provided in the area should be inspected as often as possible.*** *The periodicity for such inspections should be determined and laid down depending on the local conditions. However, for cities and towns,* ***such inspections for each hydrant should be carried out at intervals not exceeding one month and for industrial establishment once every week.*** *The record of all such inspections should be maintained and remedial action for any defects observed should be immediately taken on priority basis."*

209. By moving the lines above ground, the Petitioner could isolate smaller areas and avoid putting the entire plant at risk. The Petitioner had attended to approximately 52 instances of leakages since November 2014. This change will

MAITHON POWER LIMITED

also improve the Fire Index of the Petitioner. A copy of data on leakage and outage days is annexed herewith and marked as **ANNEXURE P/23-A**.

210. Further, as per Safety Audit conducted by National Safety Council (NSC) in 2021, following recommendations were made:

> *"6.11 FIRE WATER SYSTEM (INCLUDING FIRE PUMP HOUSE)/ HYDRANT SYSTEM*
> ...
> *OBSERVATIONS*
> *During visit, leakages found in underground hydrant line in the BTG area which is not possible to rectify also.*
> *RECOMMENDATIONS*
> *It is suggested, fire line in BTG area should be installed above the ground for ease of maintenance and better fire protection system for same area."*

A true copy of the Report of Safety Audit dated 16-19.03.2021 conducted by National Safety Council is annexed herewith and marked as **ANNEXURE P/23-B**.

211. Therefore, in view of the above recommendations the requirements of IS and ensuring the safety of plant and plant personnels, the Petitioner decided to shift the Fire line above ground in phased manner so that Preventive Maintenance (PM) of Fire Water lines and valves can also be conducted to minimize fire line leakages. The Intelligence Bureau (IB) in its report (confidential) of 15-16 Feb 2024 also recommended for periodic inspection and maintenance of firefighting system. The relevant extract is as follows:

> *"27. All fire hydrant should be regularly checked and numbered.*
> *28. The fire hoses and other firefighting equipment should be properly maintained."*

It is submitted that a copy of the IB Report shall be provided by the Petitioner as and when directed by this Hon'ble Commission.

212. Therefore, the Petitioner started shifting the Fire line above ground during 2019-24 and is proposing balance work in 2024-29 so that regular inspections and

MAITHON POWER LIMITED

Preventive Maintenance (PM) of Fire Water lines and valves can also be conducted to minimize fire line leakages.

213. In view of the above and considering the safety and security of the workforce and generating station along with the recommendations of Safety Audit Report, the Petitioner humbly requests the Hon'ble Commission to allow the additional capital expenditure of Rs. 302.52 lakh out of which Rs. 87.75 lakh in FY 2021-22, Rs. 115.43 lakh in FY 2022-23 and Rs. 99.34 lakh in FY 2023-24 under Regulation 25(1)(b) and 26(1)(d) of the Tariff Regulations 2019.

xx. Distributed Control System (Upgradation of LVS)

214. It is submitted that the Large Visual Screen (LVS) system in the Central Control Room (CCR) for the Distributed Control System (DCS) of Unit-1 and Unit-2 at Maithon Power Limited is crucial for displaying process parameters and alarm annunciation. However, the current LVS was experiencing frequent malfunctions and system hangs due to alarm overloading, as it handles over 600 alarms compared to the recommended maximum of 350 alarms suggested by BHEL.

215. This overload caused missed process alarms, posing operational risks and potential generation losses. Furthermore, the LVS has been declared obsolete by the OEM, M/s Pyrotech Electronic Pvt. Ltd., making future support and spare parts unavailable. A true copy of the obsolescence certificate dated 06.05.2022 is annexed herewith and marked as **ANNEXURE P/24.**

216. To address these issues, the LVS system has been upgraded with new stations featuring the latest hardware and software compatible with Windows 10. This upgrade distributes the alarm load effectively, resolves chronic hanging issues..

217. It is also relevant to note that Regulation 7 and Regulation 51 of IEGC Regulations, 2023 explicitly mandate that all users shall comply with the applicable

MAITHON POWER LIMITED

Regulations including the CEA Cyber Security Guidelines, 2021 [***Refer: Annexure P/17***]. Further, CEA Guidelines, 2021 in its Article 7 clearly mandate the Responsible Entity to ensure that its IT technologies in the Power System Equipment/System have the ability to be upgraded and obsolete systems should be replaced. The relevant regulation is presented below for reference -

> *"Article 7 Phasing out of Legacy System*
>
> *a) As the life cycle of the Power System Equipment/System is longer than that of IT Systems deployed therein, the Responsible Entity shall ensure that all IT technologies in the Power System Equipment/System should have the ability to be upgraded.*
>
> *b) The Responsible Entity shall ensure that the Information Security Division shall draw the list of all communicable equipments/systems nearing end life or are left without support from OEM. Thereafter CISO shall identify equipment/systems to be phased out from the list drawn, firm up their replacement plan and put up the replacement plan for approval before the Board of Directors".*

218. The improvements enhance safety, reliability and operational efficiency at the plant. The project, which costed Rs. 160.03 lakh in FY 2023-24, was essential to maintain system functionality, prevent generation losses and comply with operational standards. Therefore, the expenditure is justified and requested for approval by the Hon'ble Commission under Regulations 25(2)(a) and 25(2)(c) of the Tariff Regulations, 2019.

xxi. Network Equipment

219. It is humbly submitted that Network Equipment such as switches used for e-surveillance, play vital role in facilitating real time monitoring and communication across the Petitioner's power generation facilities providing long-term security benefits and operational reliability.

220. In order to replace 11 obsolete Cisco network switches, which are critical for maintaining the plant's 100% e-surveillance system scheme was taken up. The

current switches have reached their end of life and are no longer supported by the manufacturer, posing a significant risk to the plant's security infrastructure. A copy of the Lists of replaced switches at Petitioner's Plant and Notice of End of Sale and End of Life Announcement (for switches of four different series to be replaced) from the manufacturer is annexed herewith and marked as **ANNEXURE P/25 (COLLY)**.

221. The scheme involved procuring and installing new Cisco Catalyst switches, ensuring uninterrupted surveillance and reducing the risk of coal theft.

222. It is also relevant to note that of Regulation 7 and Regulation 51 of IEGC Regulations, 2023 explicitly mandate that all users shall comply with the applicable Regulations including the CEA Cyber Security Guidelines, 2021 [***Refer: Annexure P/17***]. Further, CEA Guidelines, 2021 in its Article 7 clearly mandate the Responsible Entity to ensure that its IT technologies in the Power System Equipment/System have the ability to be upgraded and legacy system/outdated cyber-security system should be phased out. The relevant regulation is presented below for reference -

"Article 7 Phasing out of Legacy System

a) As the life cycle of the Power System Equipment/System is longer than that of IT Systems deployed therein, the Responsible Entity shall ensure that all IT technologies in the Power System Equipment/System should have the ability to be upgraded.

b) The Responsible Entity shall ensure that the Information Security Division shall draw the list of all communicable equipments/systems nearing end life or are left without support from OEM. Thereafter CISO shall identify equipment/systems to be phased out from the list drawn, firm up their replacement plan and put up the replacement plan for approval before the Board of Directors.

c) The CISO shall ensure that till equipments/systems nearing end life or left without support from OEM are not replaced, their cyber security is hardened and ensured through additional controls provisioned in consultation with the OEM or alternate Supplier(s).*

**e.g. Use of CDAC developed AppSamvid and whitelisting of applications installed may be explored across all legacy systems. "*

223. In view of the above, the Petitioner has incurred an additional capital expenditure of Rs. 74.44 lakh during Tariff Period 2019-24 towards the Network Equipment and, accordingly, requests the Hon'ble Commission to allow the same under Regulation 25(2)(c) of the Tariff Regulations 2019.

xxii. Main Turbine & TDBFP TSS

224. It is humbly submitted that it was necessary to replace the Turbine Supervisory Instrumentation System (TSS) sensors in Unit 1 and Unit 2 Main Turbine and Turbine Driven Boiler Feed Pumps (TDBFPs) being a critical component. Initially installed around 2010-2011 during the plant's commissioning, these sensors were meticulously inspected during each unit overhaul.

225. However, recent overhauls revealed significant deterioration in the sensors' linearity and sensitivity, attributed to aging effects. According to the Original Equipment Supplier (OES), M/s Forbes Marshal Magnet, these sensors have exceeded the standard replacement cycle of six years,. Thus, the sensors had surpassed double their recommended service life, necessitating immediate replacement to ensure measurement accuracy and system reliability.

226. Furthermore, the installed VK-series sensors have been discontinued by the OEM, M/s Shinkawa Electric Co., and have been succeeded by the technologically advanced FK series. The FK series offers improved temperature characteristics, stable output, and RoHS compliance, aligning with current industry standards. Consequently, replacing the obsolete VK-series sensors with the FK series was imperative to maintain operational integrity and leverage enhanced performance, thereby justifying the associated expenditure. A copy of the Letter dated

09.12.2019 of recommendation by OEM, M/S Shinkawa is attached herewith and marked as **ANNEXURE P/26.**

227. In view of the above, the Petitioner has incurred an additional capital expenditure of Rs. 239.96 lakh during FY 2022-23 and FY 2023-24 towards the Main Turbine & TDBFP Turbine Supervisory System and, accordingly, requests the Hon'ble Commission to allow the same under Regulation 25(2)(c) of the Tariff Regulations 2019.

xxiii. DG Set

228. It is humbly submitted that a 250 kVA Generator was installed in the generating station in 2009. Further, the Central Pollution Control Board (CPCB) in its "*Guidelines for in-use Generator sets (Noise and Emission)*" (Guidelines) directed Phasing out of old Generator sets on 25.02.2015 and all users have also been directed to comply with these Guidelines in the Order dated 11.03.2015 issued by the Hon'ble National Green Tribunal.

229. As per the above Guidelines, Generator sets should be scrapped out after its useful life, i.e., 15 years from the date of manufacturing. Thus, in line with Clause 2(iii) of the said Guidelines, the current 250 kVA Generator has been scrapped and new Generator has been commissioned in the plant. Relevant extract of clause 2(iii) is as follows:

> ***"2. Phasing out old Generator sets***
>
> .....
>
> *iii. Generator sets manufactured on or after 17th May 2002 be scrapped and dismantled after its useful life, i.e., 15 years from the date of manufacturing or 50,000 hours of operation, which even earlier."*

A copy of the Guidelines for in-use Generator sets (Noise and Emission) issued by CPCB and a copy of Hon'ble National Green Tribunal's Order dated 11.03.2015 are

MAITHON POWER LIMITED

annexed herewith and marked as **ANNEXURE-P/27 (COLLY.).**

230. Accordingly, the Petitioner requests the Hon'ble Commission to allow the additional capital expenditure of Rs. 38.71 lakh incurred toward towards 250 kVA Generator in FY 2023-24 under Regulation 25(1)(b) read with 25(2)(c) of the Tariff Regulation 2019.

xxiv. Fire Tender

231. It is submitted that that the Notifications dated 06.03.2020 and 20.04.2020 issued by the Ministry of Transport and Highways bar the registration of fire tender after 15 years' service life. Notably, the existing two fire tenders in the Petitioner's Generating Station have reached the end of their 15-year service life and need to be de-registered. According to government directives, vehicles with emissions ratings below BS 4 are not eligible for re-registration. As a result, new vehicles must be procured. Given the crucial role fire tenders play in thermal power stations, this expenditure is necessary. Relevant extracts of the aforementioned Notification dated 06.03.2020 are reproduced below:

> *"I am directed to refer to the this Ministry's notification G.S.R. 889(E) dated 15.09.2016 vide which the Government has mandated mass emission standard for BS-VI throughout the country with effect from 1 April, 2020 to bring down pollution across the country. Further, this Ministry has also issued GSR 178 (E) dated 20th February, 2018 on the subject matter. However, the* ***Hon'ble Supreme Court vide its order dated 24th October, 2018 has directed that no new motor vehicle conforming to the emission standard Bharat Stage-IV shall be sold or registered in the entire country with effect from 01.04.2020****. The Hon'ble Supreme Court's in its order dated 24.10.2018 (copy enclosed) in the matter of W.P (C) No. 13029 of 1985, M.C. Mehta V/s Union of India has passed following directions:-*
>
> > *"Therefore, in exercise of the power vested in this Court under Article 142 of the Constitution, we read down sub-rule 21 of Rule 115 and direct that sub-rule 21 of Rule 115 shall be interpreted and understood to read that no motor vehicle conforming to the emission standard Bharat Stage-IV shall be sold or registered in the entire*

country with effect from 01.04.2020."

The compliance to Hon'ble Supreme Court order be strictly ensured."

[***Emphasis supplied***]

A true copy of the relevant pages of the Notifications dated 06.03.2020 and 20.04.2020 issued by the Ministry of Transport and Highways along with Order dated 27.03.2020 passed by the Hon'ble Supreme Court is annexed herewith and marked as **ANNEXURE P/28 (COLLY.)**.

232. In view thereof, two new fire tenders (Multipurpose and Water Tenders) were acquired in FY 2023-24 to meet the requirements. This will reduce the response time to reach the location and handle emergencies promptly.

233. Therefore, this Hon'ble Commission is requested to kindly allow this expenditure of Rs 101.36 Lakh under Regulation 25 (1)(b) of the Tariff Regulations, 2019.

xxv. Refurbishment of Economiser coil

234. It is submitted that due to poor coal quality and high ash content, heavy erosion of the economiser coils was recorded in last few years resulting into boiler tube leakages. The issue was taken-up with the OEM, BHEL for finding out the root cause of rapid erosion and further recommendations.

235. However, in order to address the exigencies before implementing the detailed recommendations of BHEL in MoM dated 13th – 14th June, 2018, Petitioner had to undertake refurbishment of some of the damaged Economiser coils, bends and protection shields which were beyond the repairable condition. Replacement of the economiser coils based on BHEL recommendation has been started in 2019-24 and is also being proposed during the period 2024-29. For ease of reference, the relevant extracts of BHEL's recommendations in the MoM dated 13.06.2018-14.06.2018 (***Refer Annexure P/22B***) is reproduced below:

MAITHON POWER LIMITED

"MPL presented the failure history, inspection findings for the Economizer banks, and LTSH Tubes. BHEL stated the major root cause resulting in erosion in LTSH and Economizer banks also on account of Coal Characteristics and properties. Since MPL is required to continually required to operate with .coal properties having higher ash content i.e. towards worst side of the designed coal, as per availability in the local region, ***additional care may be exercised to ensure replacement of above Economizer and LTSH sections, at least once in next 4 years,*** *followed by scheduled periodic maintenance to maintain the safety and reliability of boiler operation for plant generation."*

[*Emphasis Supplied*]

236. Since it was critical for boiler operation, pending replacement of Economizer coils, procurement process has already been initiated and refurbishment has been undertaken during FY 2019-20. The total Project Cost is at Rs. 98.93 lakh for FY 2019-20 and Rs. 0.94 lakh for FY 2021-22. The said expenditure falls within the scope of Regulation 25(2)(a) and 25(2)(b) of Tariff Regulations 2019, since quality of the coal received at the Petitioner's generating station is not within its control.

B.II.B. Additional Capital Expenditure beyond Original Scope

B.II.B. a. ***Expenditure approved in Order dated 08.01.2022 passed in Petition No. 408/GT/2020***

i. Boundary Wall Under Pass

237. The Petitioner humbly submits that the Hon'ble Commission *vide* order dated 08.01.2022 in Petition No. 408/GT/2020 (Para 226) had allowed additional capital expenditure of Rs. 100 Lakh during FY 2020-21 towards the Boundary Wall Under Pass under Regulation 26(1)(d) of the Tariff Regulations 2019.

238. It is submitted that the cost estimated in Petition No. 408/GT/2020 was on projected basis while the total additional capital expenditure incurred on the actual basis towards the said work is Rs. 118.17 Lakh in FY 2021-22 and FY 2022-23 which is minor deviation associated with such works.

MAITHON POWER LIMITED

239. Accordingly, the Petitioner humbly requests the Hon'ble Commission to allow the additional capital expenditure of Rs. 118.17 Lakh in FY 2021-22 and FY 2022-23 under Regulation 26(1)(d) of the Tariff Regulations 2019.

ii. Peripheral Road (Road Along Boundary Wall)

240. The Petitioner humbly submits that this Hon'ble Commission *vide* order dated 08.01.2022 had allowed additional capital expenditure of Rs. 150.00 lakh during FY 2020-21, Rs. 150.00 lakh during FY 2021-22, Rs. 100.00 lakh during FY 2022-23 and Rs. 50.00 lakh during FY 2023-24 towards the Road along the Boundary wall under Regulation 26(1)(d) of the Tariff Regulations 2019.

241. However, the actual cost incurred is slightly more than estimated cost in Petition No. 408/GT/2020, primarily on account of execution of major part in FY 2022-23 and 2023-24 after approval in Order dated 08.01.2022. The requirement of Road along Boundary Wall was proposed by the Petitioner on the directions of IB. The increase in the additional capital expenditure is due to the fact that the cost estimated in Petition No. 408/GT/2020 was on projection basis.

242. Accordingly, the Petitioner humbly requests that the Hon'ble Commission to approve the additional capital expenditure of Rs. 51.30 lakh incurred during 2019-20, Rs. 27.66 lakh during 2020-21, Rs. 98.62 lakh during FY 2022-23 and Rs. 344.49 lakh in FY 2023-24 totalling to Rs. 522.08 lakh towards the said work under Regulation 26(1)(d) of the Tariff Regulations 2019, along with minor cost overrun which was beyond control of Petitioner.

iii. Automatic Generation Control

243. The Petitioner humbly submits that the Hon'ble Commission *vide* order dated 08.01.2022 in Petition No. 408/GT/2020 had allowed additional capital expenditure of Rs. 80 lakh during FY 2019-20 towards the Automatic Generation

control under Regulation 26(1)(a) of the Tariff Regulations 2019. It is submitted that the scheme has been completed at Rs. 79.91 Lakh (with a minor deviation).

244. Accordingly, the Petitioner humbly requests the Hon'ble Commission to allow the additional capital expenditure of Rs. 49.96 lakh in FY 2020-21 and Rs. 30.00 lakh in FY 2023-24 under Regulation 26(1)(a) of the Tariff Regulations 2019.

iv. Coal Pit Run-off Mechanized Drainage systems

245. The Petitioner humbly submits that the Hon'ble Commission vide Order dated 08.01.2022 in Petition No. 408/GT/2020 had allowed additional capital expenditure of Rs. 399.53 lakh during FY 2019-20 towards the Coal Pit Run-off Mechanised Drainage systems under Regulation 26(1)(c) of the Tariff Regulations 2019. However, the scheme could not be executed due to local agitation.

246. The Petitioner submits that the present scheme was approved in the Tariff Order dated 08.01.2022. The scheme was approved mainly for construction of following drainage as mentioned in para 91 (iv):

(a) Construction of the drainage system for natural flow of storm water entering through northern area near the plant and preventing it from mixing with the contaminated water;

(b) To divert coal run off disposal into Ash pond (during monsoon season) through a pumping and piping management.

(c) To contain the coal dust mixed run off water within coal storage area.

247. However, the scheme could not be executed due to local agitation despite the Petitioner (after spending Rs. 10.92 Lakh in FY 2019-20) undertaking mitigating measures. The resistance was mainly with respect to usage of land outside plant boundary in the drainage route. After lot of persuasion and discussions with local residents the Petitioner is now hopeful of reaching an amicable agreement over

MAITHON POWER LIMITED

revised route very soon. This expenditure is, therefore, proposed to be incurred partly in FY 2024-25 and FY 2025-26 with capitalization in FY 2025-26. Considering the necessity of project, Petitioner proposes to undertake this project during 2024-29 at the earliest. Hon'ble Commission is requested to approve Rs. 10.92 Lakh in FY 2019-20 under Regulation 26(1)(c) of Tariff Regulations 2019. The balance amount of Rs. 388.61 Lakh is being proposed in Tariff Period 2024-29.

v. Mini-fire tender

248. The Petitioner respectfully submits that the Hon'ble Commission, through its order dated 08.01.2022, had approved an additional capital expenditure of Rs. 25.00 lakh for FY 2022-23 towards the procurement of a mini-fire tender under Regulation 26(1)(d) of the Tariff Regulations 2019. However, the actual cost incurred was slightly lower than the estimated cost provided in Petition No. 408/GT/2020.

249. It is further submitted that this expenditure was essential to ensure compliance with IS Code 3034, paragraph 10.2.5. The relevant extract for reference has been provided below. The extract for the same is mentioned below for ready reference:

"10.2.5 Super Thermal Power Stations Having Installed Capacity Exceeding 1000 MW (Class I)
The following equipment shall be provided:

Type of Appliances	*No.*	*Manning Pattern*
Foam and CO2 C/T	*1*	*Round the Clock*
Water Tender type B	*1*	*Round the Clock*
Dry Chemical Tender 2000 kg	*1*	*Round the Clock*
Emergency Tender conforming to IS 949 : 1985	*1*	*As reserve*
Hydraulic Platform 22m height (indigenously fabricated)	*1*	*Reserve*
Portable Water/Foam Monitors	*4*	
13.5 m light alloy extension ladders	*2*	
Trailer/Portable Flood Light Unit	*1*	

MAITHON POWER LIMITED

Type of Appliances	*No.*	*Manning Pattern*
Jeep 4 × 4	*1*	
B A sets (positive pressure type)	*24*	
High pressure Charging Set	*1 set*	
Blower and Exhauster	*4 No.*	
Water Jel Blankets (1.80m × 1.50m)	*16 No.*	
Water Jel Blankets (0.90 × 0.75m)	*32 No.*	
Water Jel Containers	*8 No.*	
Foam Compound	*50000 litres*	
Dry Chemical Powder Trailer of 150 kg capacity	*1 No.*	
High Expansion Foam Generator	*2 No.*	

NOTE - Considering the large area of the Super Thermal Power Stations and also for facilitating quick turnouts it may be necessary to deploy the operational equipment at two fire stations, a main Fire Station and Sub-Fire Station, both having update communication arrangement to help easy mobilization in case of emergency."

A true copy of the IS Code 3034 has been annexed herewith and marked as **ANNEXURE-P/29**.

250. This Hon'ble Commission is respectfully requested to approve the aforementioned scheme with the actual expenditure of Rs. 24.97 lakh against the approved cost of Rs. 25 lakh, as the deviation is minor in nature. This request is made under Regulation 26(1)(b) and (d) of the Tariff Regulations 2019.

vi. Economiser Platform

251. The Petitioner submits that the Economizer Coil Handling Platform scheme was approved with cost estimation of Rs 350 lakh under Regulation 26(1)(d) by the Hon'ble Commission in the Tariff Order dated 08.01.2022 to address the problem of forced outage due to Boiler Tube Leakage ("**BTL**") which constituted more than 90% of forced outages which led to loss of revenue and decreased plant availability. However, revision in design due to direction from Chief Inspector of Factories ("**CIF**") has lead to change in the scope of work and has increased the

cost to Rs. 1461.26 lakh as explained below.

252. The said project of Economiser Platform was planned only for taking out Economiser coils from inside the furnace and repairing them locally at the height of 43 meters by placing one side of the coil on the platform itself and re-inserting them after repairs. And, accordingly it was envisaged to extend the Floor Platform only at 43 meters with estimated quantity to be handled as approximately 100 MT for each Unit considering in-situ repair of coils partly resting on the platform.

253. It was later realized that part of coil on the boiler side could not be easily inspected/repaired from the platform. As working at a height of 43 meters with proposed Economiser Platform posed safety risk for working personnel and thus, a suitable arrangement was required in compliance of section 32(c) of the Factories Act, 1948. Relevant extract of this provision is as follows:

> ***"32. Floors, stairs and means of access.—In every factory—***
> *(c) when any person has to work at a height from where he is likely to fall, provision shall be made, so far as is reasonably practicable, by fencing or otherwise, to ensure the safety of the person so working."*

254. It was, thus, envisaged to place full coils to be repaired on the platform. With this change, the tentative estimation of structure loading increased from 100 to 450 MT in each Unit considering Economiser Platform with Economiser Coil and Handling structures. However, the originally envisaged Platform could not safely handle this increased loading.

255. In this regard, on 30.03.2021, Chief Inspector of Factories (CIF) had informed the Petitioner that stability test certificates issued for Petitioner's plant are subject to compliance of the condition that no structure shall be loaded, under any circumstance, beyond its Designed Safe Load Capacity and Load as per Dynamic Model Analysis. Relevant extract of the letter date 30.03.2021 is given below:

प्रसंग: Your letter Ref: MPL/FY 21/21-03/019 दिनांक 22.03.2021

महाशय,

उक्त विषय एवं प्रसंग का निदेश किया जाय ।

झारखंड कारखाना नियमावली 1950 के नियम 3A के अन्तर्गत विहित प्रपत्र 34 (Prescribed Form 34) में उक्त प्रमाण पत्रों को निर्गत किया गया है उपर्युक्त निर्गत स्थायित्व प्रमाण पत्रों (Stability Certificates) को नियमानुसार प्रेषित किया गया जिसकी स्वीकार्यता निम्नांकित शर्तों के साथ दिया जाता है ।

(क) कारखाना भवन के प्रत्येक संरचना का अनुरक्षण / पेन्टिंग आवश्यकता के अनुसार किया जायेगा ।

(ख) किसी संरचना पर अभिकल्पित सुरक्षित लोड क्षमता (Designed Safe Load capacity) & Load as per Dynamic model analysis report से अधिक लोड किसी परिस्थिति में नहीं दिया जायेगा ।

(ग) निर्धारित काल अवधि के बाद समुचित जाँच सुनिश्चित करना अनिवार्य होगा ।

(घ) सक्षम व्यक्ति द्वारा निर्धारित शर्तों का अनुपालन प्रभावी ढंग से करना अनिवार्य होगा।

भवदीय

मुख्य कारखाना निरीक्षक, झारखंड
श्रम भवन, राँची

A copy of the Letter dated 30.03.2021 from CIF is annexed herewith and marked as **ANNEXURE P/30.**

256. Based on above direction and for safe working at ground level, after Platform strengthening, the philosophy of complete economizer coil replacement and repairing the replaced economizer coil at ground level was found suitable option. Hence, a suitable arrangement was required to take out the Economizer Coils outside the Boiler, resting the same on the Platform and lowering the Coils to ground level for repairing the Economizer Section. Accordingly, the Petitioner explored Economizer Coil Handling structure for coil repairing and replacement which is safe in all respects.

257. This Philosophy was also line with recommendation of BHEL in MoM dated 13-14 June 2018 for replacement of Economiser coils in next 4 years. Relevant extract of the Report is as follows:

> *"MPL presented the failure history, inspection findings for the Economiser banks, and LTSH Tubes. BHEL stated that major root cause resulting in erosion in LTSH and Economiser banks also on account of Coal*

MAITHON

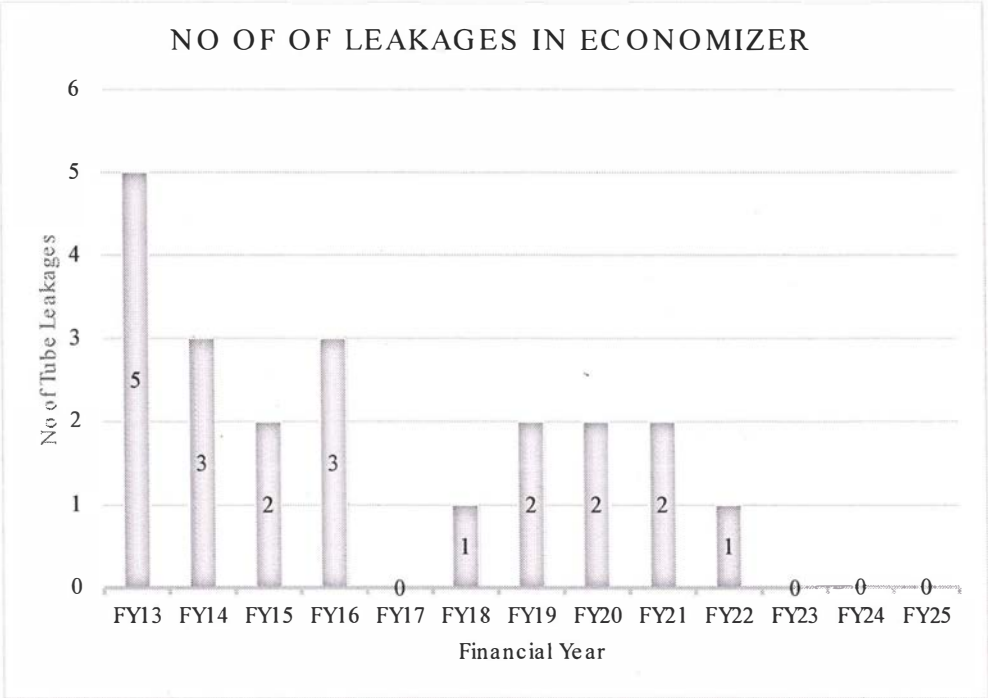
Characteristics and properties. Since MPL is required to continually required to operate with the coal properties having higher ash content i.e. towards worst side of the designed coal, as per availability in the local region, ***additional care may be exercised to ensure replacement of above economiser and LTSH sections, at least once in next 4 years,*** *followed by scheduled periodic maintenance to maintain the safety and reliability of boiler operation for plant generation".*

A copy of MoM dated 13-14 June 2018 has already been annexed as Annexure-P/22B.

258. Hence, in the compliance of the requirements by CIF and BHEL recommendation, the Petitioner revised the said scheme with addition of Economiser Coil Handling structure with lowering arrangement at both sides for easy and Safe lowering and lifting of Economiser coils and timely replacement/inspection completion. Arrangement of Economiser Coil repair bed was further established at ground level for repair of the Economiser coils . Thus, thorough repair of coils could be carried out safely at ground level and 100 % coils could be repaired and re-inserted inside the Boiler within the Annual Overhaul (AOH) duration.

259. Also, additionally Electric Overhead Travelling (EOT) crane for easy handling and lowering/lifting of Economiser coils was included for avoiding any operational/handling risks. Similarly, for the handling structure, civil foundation jobs were included for additional column at Boiler left and right side from 0 to 55 mts.

260. Therefore, in view of above constraints and safety of the workmen and the plant, the Petitioner executed the said revised scope to fabricate permanent structure for the coil removal, inspection, repair and re-placement of coil in the boiler. The reduction in number of leakages after the execution of schemes is shown in the following graph:



261. Thus, revision in scope was to comply with CIF directive, to enhance safety of the plant and the workplace and avoid any unwanted eventuality and, hence, the cost overrun is beyond the control of the Petitioner. In addition, the said scheme shall enhance the Plant availability and enable the Petitioner to cater to peak demand.

262. Therefore, in the above context, the factors for the cost increase was beyond the control of the Petitioner and, thereby, it is humbly prayed that the Hon'ble Commission may be pleased to approve the aforesaid Actual Additional Expenditure of Rs 1461.26 lakh under Regulation 26(1)(b) and 26 (1)(d) of Tariff Regulations 2019

vii. Soak Pit

263. The Petitioner submits that the Soak Pit scheme was duly approved by the Hon'ble Commission in the Tariff Order dated 08.01.2022 for Rs. 40 lakh for FY 2019-20 under Regulation 26(1)(a) and 26(1)(b) of Tariff Regulations 2019. Further, it is submitted that the Order in Petition No. 408/GT/2020 was published on 08.01.2022 and, therefore, the order placement was delayed leading to the

MAITHON POWER LIMITED

subsequent deviation from the year of capitalization approved by the Hon'ble Commission. The work has been capitalized in FY 2023-24.

264. Accordingly, the Petitioner humbly requests the Hon'ble Commission to allow the additional capital expenditure of Rs. 15 lakh incurred during FY 2023-24 under Regulation 26(1)(a) read with Regulation 26(1)(b) of the Tariff Regulations 2019.

viii. eSecurity

265. It is submitted that works such as gate house, installation of camera, satellite phone and UPS Capacitor was necessitated on account of increasing security incidents due to local agitations, strikes, dharna and increasing instances of theft etc. and the same was approved by the Hon'ble Commission *vide* its Order dated 13.12.2022 in Petition No. 4/RP/2022 in Petition No. 408/GT/2020 wherein the Hon'ble Commission approved Rs. 939 Lakh (Rs. 369 Lakh+ Rs. 550 Lakh+ Rs. 20 Lakh) in terms of the e-security system scheme on account of safety as per the IB Report dated 10.01.2019. The relevant extract of the Order dated 13.12.2022 is reproduced as below for your quick reference:

> *"12 **Analysis and decision***
> *We have examined the matter and perused the IB report. The Review Petitioner had claimed total additional capital expenditure towards Gate house near JNT/ Security infra/ E-security for Rs. 4.01 crore during the period 2016-19, under Regulation 14(3)(iii) of the 2014 Tariff Regulations and **total additional capital expenditure for Rs. 3.69 crore during the period 2019-21, under Regulation 26(1)(d) of the 2019 Tariff Regulations.** Similarly, the Review Petitioner had also claimed the projected additional capital **expenditure of Rs. 5.50 crore towards Installation of CCTV cameras during the period 2020-22, under Regulation 26(1)(d) of the 2019 Tariff Regulations and Rs.20.00 lakh towards Automatic Boom Barrier in 2020-21 under Regulation 26(1)(d) of the 2019 Tariff Regulations**. The Review Petitioner is mainly aggrieved with the disallowance of the aforesaid additional capital expenditure which were incurred during the period 2016-19 and proposed to be incurred during the period 2019-24, towards enhancement of security measures based on the IB report dated 10.1. 2019.*
> *13. .....In our view, the additional capital expenditure claimed in respect of the aforesaid assets is only a culmination of preliminary instructions given to*

officers of the Review Petitioner (security audit), during November 2018, by the IB and its report dated 10.1.2019. Moreover, the installation of these assets is essential for surveillance and safety of the generating station particularly considering its location and the threat assessment to the premises/plant. These aspects were inadvertently not considered at the time of passing the impugned order 8.1.2022. The non-consideration of the same, according to us, is an error apparent on the face of the record and review on this count is maintainable. ***Accordingly, the additional capitalization claimed by the Review Petitioner, in respect of the items/assets (as mentioned in para 12 above) for the period 2016-19 and for the period 2019-24, are admissible and accordingly allowed.*** *Issues (A), (B) and (C) are disposed of as above".*

266. Accordingly, the Petitioner has incurred total of Rs. 628.54 Lakh in 5 years period of 2019-24. Notably, in terms of the IB report on Industrial Security dated 15-16th February 2024, further strengthening of CCTV network is required, which has been proposed during 2024-29. As stated earlier, the said report shall be submitted as and when directed by this Hon'ble Commission.

267. In view of the above and considering the safety and security of the workforce and generating station along with the IB recommendations, the Petitioner humbly requests the Hon'ble Commission to allow the additional capital expenditure of Rs. 628.54 lakh during 2019-24 under Regulation 26(1)(d) of the Tariff Regulations 2019.

Re. Upgradation of ABT for RRAS and SCED

268. It is humbly submitted that in Order dated 08.01.2022, Hon'ble Commission had allowed Rs. 75 Lakh towards Upgradation of ABT for RRAS and SCED in FY 2020-21 under Regulation 26(1)(a). This scheme is currently dropped since there is no directive available from ERLDC/ERPC with respect to 5 minutes data requirements. Therefore, the Petitioner is not claiming any ACE against this scheme and seeks liberty to claim the same in true-up when the said directive is issued and complied with by the Petitioner.

MAITHON POWER LIMITED

B.II.B. b. ***New Additional Capital Expenditure***

i. Safety (Platform in coal mill area)

269. It is submitted that coal mill is an integral part of the boiler system, supplying fuel along with primary air to enable combustion. Due to its very nature, the coal mill is prone to erosion, so proper maintenance is essential to ensure consistent throughput. Additionally, the coal mill area is prone to leakages, particularly around the mill outlet, coal pipe couplings and coal funnel, which often require repairs at heights of 10 to 15 m. Fixing these leaks typically requires scaffolding, which can not only be time-consuming and sometimes extends over several days but is also a safety risk to the workmen doing the maintenance at height of 10-15 m on a temporary structure.

270. Therefore, to improve efficiency, reduce maintenance time and ensure safety, a permanent platform was needed in place of scaffolding particularly if heavy coal mill internals were to be taken out for maintenance. With a total of 16 coal mills, the Petitioner identified key locations to construct permanent structures to create a safer work environment and incurred expenditures during the period FY 2019-20 to FY 2023-24. Pertinently, the Competent Person, notified by the Chief Inspector of Factories requiring Safety Audit of MPL in its letter dated 24.01.2024, has also recommended this need for a permanent structure in Coal Mill Area in the Safety Audit Report dated 14th-15th June 2024.

271. In this regard, the Safety Auditor during Safety Audit stated that the Safety Platform in coal mill area is not adequate and made the following recommendations:

> ***"(R) Documents of system of Management of change / process / plant modification/change of procedure:***
> *Observation- Coal Mill Maintenance Platform is not available.*

Recommendation- Recommended to erect permanent platform in those areas of Coal Mill which are located at height and need periodic maintenance and risk assessment to be carried out for newly constructed platform and activities."

A copy of the Letter dated 24.01.2024 issued by the Chief Inspector of Factories is annexed herewith and marked as **ANNEXURE P/31-A.** A copy of Report of Safety Audit dated 14th – 15th June, 2024 is annexed herewith and marked as **ANNEXURE P/31-B**.

272. Consequently, the Petitioner, in line with the recommendations of the Safety Auditor in the Safety Audit report made sure that additional platforms were provided along with the platform extensions in Boiler and Coal Mill Area to carry out regular maintenance work.

273. Accordingly, the Petitioner has incurred Rs. 261.24 Lakh for the safeguarding higher safety and security standards of the plant during 2019-24 and hereby requests that said scheme may be approved by the Hon'ble Commission as additional capital expenditure under Regulation 26(1)(d) of Tariff Regulations 2019.

ii. Interconnection of Chutes from BCN 4A/B

274. The Petitioner humbly submits that as per the existing configuration, the belt conveyors just after the crushers i.e., the Chute Interconnection in 4A/B- 6, have no cross interconnectivity between them leading to no interchange of coal flow from A stream to B Stream or vice versa. Therefore, presently the system reliability depends upon 3 streams, i.e., (BCN 4A/B, 6A/B & 8A/B) which are in series. If Petitioner's Coal Handling Plant is equipped with two parallel conveyors with interconnectivity, it would ensure redundancy and reliability.

275. It is also pertinent to mention that with commencement of coal supply through

rake under Gati Shakti Policy which has led to significant saving in capital and transportation cost which have been passed on to the beneficiaries. It will be critical to have enhanced redundancy in the system for smooth unloading of the rakes for reliable operation of the coal handling plant. In view of the above, Petitioner has installed an interconnection chute with flap gates b/w BCN-4A to 6B and BCN-4B to 6A at JNT8 to improve the overall BCN-4A/6A & 4B/6B route availability at an additional capital expenditure of Rs. 49.98 lakh in FY 2022-23 and, accordingly, requests the Hon'ble Commission to allow the same under the Regulation 26(1)(c) and Regulation 76 of the Tariff Regulations 2019.

iii. Ash wharf

276. The Petitioner respectfully states that, in accordance with MoEF&CC guidelines dated 31.12.2021 for ash disposal, the ash generated by the generating station must be collected and transported to nearby abandoned mines. To comply with these guidelines, the Petitioner has engaged a third-party contractor to handle the collection of an allocated portion of ash.

277. The contractor is tasked with collecting ash from the Main Fly Ash Silos, Bottom Ash Silos and Ash Pond areas and transporting it to nearby abandoned mines, referred to as "Designated Mines." The ash disposal process, including dumping and stowing in these mines, must comply with the relevant MoEF&CC guidelines and notifications, which are subject to periodic updates.

278. The scope of work includes excavating wet ash from ash ponds, loading ash from Fly/Bottom Ash Silos and Ash Ponds, evacuating ash from the plant and transporting it to the designated mines for stowing. In addition to backfilling mine voids, the contractor may also transport ash for other eco-friendly applications to achieve 100% ash utilization. This includes the sale and transport of conditioned

fly ash (CFA) for use in cement industries in the Eastern region, North-East States, and for export to Bangladesh, utilizing rail wagons as per the demand-supply scenario. CFA, preferred for its cost-effectiveness, is loaded in bulk from the silo area into Box-N or other types of wagons, covered with tarpaulin, using Hyvas and payloaders.

279. Despite certain seasonal limitations, this method is economically viable due to reduced logistics costs. To further optimize ash disposal logistics, the Petitioner has undertaken the construction of an Ash Wharf located opposite the Coal Wharf on the same rail line. The benefits of this initiative include faster loading, reduced railway detention charges, minimized logistics costs compared to Hyvas/loaders, lower environmental impact and reduced socio-political challenges. Additionally, eliminating manual labor interventions at the main silo area, which is in an open space and hence, mitigates local community issues. This initiative positions the Petitioner more competitively in the demand-supply market and is projected to generate significant savings.

280. A cost-benefit analysis reveals that disposing of ash via rail mode could save approximately Rs. 500-600 lakh annually with use of Ash Wharf. Further, with commissioning of Ash Silos for loading of wagons, the savings would approximately increase to Rs. 1600 -1700 lakh annually. Detailed computation in respect of the cost benefit analysis has been provided in section dealing with Ash Disposal Expenses for FY 2024-25 to FY 2028-29.

281. In view of the above, the Petitioner requests the Hon'ble Commission to allow the actual additional capital expenditure incurred by the Petitioner of Rs. 201.82 lakh spread in FY 2022-23 and FY 2023-24 under Regulation 26 (1)(b) and 26(1)(e) of the Tariff Regulations 2019.

iv. MVWS System (Medium Velocity Water Spray)

282. The Petitioner respectfully submits that a Fire Hydrant system is strategically installed within the plant area, supported by a Fire Tender on standby to address on-site emergencies. However, in the Report for safety audit conducted by National Safety Council dated 16-19 March 2021 (***Refer ANNEXURE P/23-B***), with regard to Main Oil Tank ("**MOT**") it was observed that sprinkler system needs to be provided:

> *"6.11....*
> *Observations:*
> *Medium Velocity Water sprinkler provided for the following*
> *1. Cable Gallery*
> *2. LDO/HFO tank area*
> *3. CHP-Conveyor belt area.*
> *.....*
> ***Sprinkler system not provided for MOT tank***
> *Recommendations:*
> *It should be provided and maintained"*
>
> [***Emphasis Supplied***]

283. According to IS 3034 standards, it is essential to address fire emergencies promptly and it mandates the installation of Water Spray (WS) System for controlling fire involving large quantities of lubricating oil (which includes MOT) in Thermal Power Stations with a capacity of 1000 MW or more. Same has been reproduced below for ready reference:

> *"**8.5.1***
> ***The fixed water spray type protection system shall be used for controlling a fire involving large quantities of lubricating oil on turbine generators.** This shall consists of two systems of water protection, one for areas below the operating floor of the turbo generator and designed to extinguish pool fires and also providing protection against heat generated by three-dimensional or spray fires. The other is a water spray system for oil fires at or around the bearing house.*
> *...."*
>
> ***[Emphasis Supplied]***

284. Accordingly, Medium velocity water spray system ("**MVWS**") which has been

MAITHON POWER LIMITED

installed in the MOT and Cable Cellar area, is designed to extinguish fires automatically with the MVWS system installed as per above mandate, fire emergencies can now be more effectively managed within the required timeframe, avoiding the possibilities of significant asset loss and interruptions in plant generation.

285. Considering the mandate and the benefits from the scheme of reduced response time as the automatic operation of the MVWS system ensures rapid response to fire incidents, the Petitioner would be able to ensure enhanced availability and reliability of Fire Protection System and Protection of Critical Equipment, which will safeguard essential equipment and minimize the risk of severe damage during a fire incident. It is, therefore, requested before the Hon'ble Commission to allow the expenditure of Rs. 97.28 lakh for FY 2023-24, as same falls under the scope of Regulation 26(1)(b) and (d) of the Tariff Regulations 2019.

v. Reliability (Structural Strengthening - BTG, CHP)

286. It is submitted that the Petitioner conducted a '*statutory structural strengthening audit & corrosion audit*' in January 2021, in compliance of directions dated 16.01.2021 of the Office of the Chief Inspector under the Factories Act, 1948, and recommendations given *vide* letter dated 13.09.2022 by the Government approved third party agency. In their report, the auditors have suggested for re-strengthening of structures to avoid any safety incidence and to ensure system reliability. A copy of the said directions dated 16.01.2021 issued by the Office of Chief Inspector is annexed herewith and marked as **ANNEXURE P/31C**. A copy of recommendation letter dated 13.09.2022 issued by the Government approved third party agency is annexed herewith and marked as **ANNEXURE P/31D.**

287. The following is the list of structures that needed rectification as per letter dated

MAITHON POWER LIMITED

13.09.2022:

"....

During inspection it was found that rectification/modification in RCC buildings/structures were upto the mark, but buildings/structures as mentioned below needs to restored. Following is the cost of structures that needs rectification:

1. *BCN#3A & 3B: Main gallery structure and supporting members including tie bracings & columns.*
2. *Junction Tower (JNT) 1, 2, 3, 4, 4A, 5, 6, 7 and 8 Crusher House-Column, bracings, plan bracings, supporting members, runners, intermediate truss, Monorail Door Support, Slab Supporting Beam, Length breakers & Debris Chute Revamping.*
3. *Crusher House Dust Extraction System Chimney & Duct Revamping."*

288. The total expenditure incurred is Rs. 443.92 Lakh in FY 2023-24 on following counts:

(a) Main gallery structure and supportive members for BTG and CHP area upgradation (as per points 1 & 2 above):

i. For structures of BTG and Coal Handling Plant, it has been found that at multiple locations the structure is damaged/corroded and structural members need to be replaced.

ii. Additionally, support was required for the structural members to sustain the Operation of BTG Area Equipment and Coal Handling system in the long run and to avoid any damage to the system due to non-compliance of the recommended actions by the auditor. Accordingly, the Petitioner requests the Hon'ble Commission to allow the additional capital expenditure of Rs. 238.20 lakh in FY 2023-24 under Regulation 26(1)(d) of the Tariff Regulations 2019.

(b) Revamping of Debris Chutes (as per point 2 above):

i. It may be noted that Debris chutes are installed in every junction tower (JNT) to collect spillage coal and coal dust during the feeding

cycle. These chutes facilitate the transfer of coal from the top floor to the ground floor, from where it is transported to the track hopper and then fed into the bunkers.

ii. The chutes are crucial for collecting spillage coal and dust from every floor, connecting the top floor to the ground floor. However, moisture and rainwater ingress have led to corrosion and damage of these chutes.

iii. The absence of functioning debris chutes means that spillage coal and coal dust cannot be efficiently collected from the take-up floor to the ground floor. With damaged debris chute, dumping coal directly from the top floor, approximately 60 meters high, is impractical as it creates significant fugitive dust in the surrounding area. These chutes play an essential role in recovering spillage coal, maintaining housekeeping standards and adhering to 5S principles throughout the Coal Handling Plant.

iv. Without the debris chutes, accumulated coal dust and spillage coal on each floor pose fire hazards and slip, trip and fall risks. Additionally, extra manpower would be needed to clean and reload spillage coal onto conveyor belts at the height of JNTs, a process that is both unsafe and cumbersome. Therefore, revamping the debris chutes was necessary as per above direction of auditor, to enhance worker safety, improve housekeeping environmental compliance and ensure the recovery of coal.

V. In view of thereof, the Petitioner has incurred Rs. 98.91 lakh in FY 2023-24 towards removal of old damaged debris chute, supply of

MAITHON POWER LIMITED

debris chute material, erection and installation at every JNT, cutting of concrete floor, concrete grouting work at connecting floor and support with the junction tower structure etc. Accordingly, the Petitioner requests the Hon'ble Commission to allow the same as additional capital expenditure under Regulation 26(1)(d) of the Tariff Regulations 2019.

(c) Crusher House Dust Extraction System Chimney & Duct Revamping (at point 3 above)

i. Dust extraction (DE) system is an air quality improvement system installed in the crusher house to improve the breathable air quality and safety by removing dust particles from the extracted air from crusher house. It works based on collection, separation and filtration. DE system and chimney is required to collect the dust particles from the crusher house through duct and discharge the course particles on the conveyor and fine particles through Chimney at a height of 34 m to maintain the environmental norms (PM 2.5 & PM 10).

ii. Due to heavy windstorm, 20 m top portion of the chimney of DE system got collapsed resulting in discharge of fine particles at very low height than required for meeting environmental norms. Therefore, the above direction was complied with for revamping the chimney and duct of dust extraction system to reduce the pollution in the vicinity of the plant, so that environment norms can be maintained at plant and nearby area.

iii. In the view of the above, the Petitioner has incurred Rs. 106.81 Lakh

MAITHON POWER LIMITED

towards Crusher House Dust Extraction system, which kindly be allowed under Regulation 26(1)(d) of Tariff Regulations 2019.

vi. Field Hostel

289. It is submitted that this Hon'ble Commission in its order dated 19.11.2014 in Petition No. 274/2010 had acknowledged that there is a need of field hostel within the boundaries of the plant for smooth, intervention free operation of the plant, considering the difficult remote location of the plant, accessibility at odd hours and frequent blockages and agitation by local villagers backed by factional politicians. Further, this Hon'ble Commission in its Order dated 08.01.2022 acknowledged the existence of local agitations and unrest leading to delay in execution of Field Hostel and, accordingly, allowed the expenditure towards the Field Hostel.

290. In this respect, it is necessary to take note of the fact that there have been multiple instances of major issues/disruption done by Locals which necessitates construction of Field Hostel. Pertinently, there have been disruptions/issues on 12 occasions in FY 2018-19, 11 occasions in FY 2019-20 and 15 occasions in FY 2020-21.

291. Further, in case of gate blockage or agitation outside the plant, the operation and maintenance officers/ other staffs in one shift can neither go out nor can continue or directed to continue to work beyond their shifts/ recommended number of hours without proper rest as per the Factories Act, 1948.

292. In absence of provision of Field Hostel, the Staff/Officers will be forced to continue to work/stay in the plant beyond the standard hours which in turn leads to violation of the Factories Act as well as fatigue the operation/ maintenance engineers which may lead to fatal events.

293. Therefore, in order to accommodate more personnel and to provide proper rest to officers/ staffs to deal with such events which are unavoidable in future as well, the Petitioner had to incur and capitalise an amount of Rs. 1.02 lakh in FY 2019-20 and Rs. 89.71 lakh in FY 2020-21 towards increasing the capacity of the Field hostel.

294. In view of the above, the Petitioner requests the Hon'ble Commission to allow the actual additional capital expenditure incurred by the Petitioner of Rs. 90.73 lakh under Regulation 26(1)(b) and 26(1)(c) of the Tariff Regulations 2019.

vii. Fire door for MCC Room

295. It is submitted that the existing doors of Batteries Rooms, Motor Control Centre (MCC) Rooms and Electrical Rooms, are of normal type. In this regard, the provisions as contained in the Indian Standard Code of Practice for Fire Safety in Cable Runs (IS 12459-4) specifies the use of fire doors and is reproduced below for ready reference:

> ***"COMPARTMENTATION AND FIRE STOPS/ CABLE PENETRATION SEAL AND FIRE DOOR***
>
> ***5.1*** *In Order to prevent vertical/ lateral spread of fire through cables, all cable tunnels/galleries through which cable/ cable trays pass should be subdivided into smaller compartments irrespective of type of cable used.* ***This should be done by provision of walls at interval not more than 30 m and by sealing the apertures openings with the use of fire stops****. The fire rating of fire stops when tested according to the method given in IS 12458 and of barrier wall, when tested according to IS/ISO 834-4, shall not be less than the rating of building component.* ***For the requirements of fire rated doors, requirements as in IS 3614 shall be used****."*
>
> [***Emphasis supplied***]

296. It may be appreciated that when a fire breaks out, the heat causes the intumescent strips to expand to fill the gap between the fire door and the frame. This seals the room and stops the spread of fire for a given time. Normal doors will not be able to serve the purpose in the event of fire break out. Since a breakout of fire is never

MAITHON POWER LIMITED

predictable, the fire door, unlike any other door, will then perform its prime purpose – to protect lives and offer protection to the remainder of the building and to other buildings.

297. Therefore, to comply with IS 12459 (Code of Practice For Fire Safety in Cable Runs) of having Fire Check Doors, the Petitioner has carried out the replacement of normal doors with fire Doors for which the Petitioner has incurred Rs. 19.84 Lakh in FY 2023-24 and the same may be approved by the Hon'ble Commission as additional capital expenditure under Regulation 26(1)(b) of the Tariff Regulations 2019.

viii. SCADA Upgradation

298. It is humbly submitted that at para 89 of Tariff Order dated 08.01.2022, the Hon'ble Commission acknowledged the matter for Upgradation/replacement of old Remote Terminal Unit (RTU) in Eastern Region. Subsequently, *vide* letter dated 14.02.2018, ref no: ERLDC/SL/2017-18/6212, Power System Operation Corporation Limited ("**POSOCO**") has requested to take appropriate action for replacement/Upgradation/of the RTU/SAS as there were instances of frequent failure of old RTUs. Also, it is stated that last mile fibre connectivity may also be made available as real time data reporting (through SCADA) over IEC-104 protocol is not available. A copy of the Letter dated 14.02.2018 issued by POSOCO is annexed herewith and marked as **ANNEXURE P/32**.

299. It is also relevant to note that Regulation 7 and Regulation 51 of IEGC Regulations, 2023 explicitly mandate that all users shall comply with the applicable Regulations including the CEA Cyber Security Guidelines, 2021 [***Refer: Annexure P/17***]. Further, CEA Guidelines, 2021 in its Article 7 clearly mandate the Responsible Entity to ensure that its IT technologies in the Power System

MAITHON POWER LIMITED

Equipment/System have the ability to be upgraded. The relevant regulation is presented below for reference -

> *"Article 7 Phasing out of Legacy System*
> *a) As the life cycle of the Power System Equipment/System is longer than that of IT Systems deployed therein, the Responsible Entity shall ensure that all IT technologies in the Power System Equipment/System should have the ability to be upgraded."*

300. In view of the above Petitioner incurred additional expenditure of Rs. 20.50 Lakh for SCADA upgradation. The said work was executed and capitalized in FY 2019-20. Accordingly, the Petitioner requests the Hon'ble Commission to allow the same under Regulation 26(1)(b) of the Tariff Regulations 2019.

ix. Extension of Stores

301. It is humbly submitted that the "Store Renovation" was required to be undertaken to address the problem of Open Storage of critical Spares since more than 60% of the Equipment & Spares and Lubricating Oil were stored in the open due to unavailability of covered area. This problem arose due to supply of free spares by the OEM, BHEL worth Rs. 84 Crore as compensation for generation loss during stabilization period of these Units. Storage space in original scope did not envisage this additional storage requirement.

302. It may be appreciated that storing these items in open area leads to deterioration of the said material and items. With due course of time and aging of the plant, storage of additional spares requires more space. In this respect, the National Safety Council in its Report of 16-19 March 2021 [***Refer Annexure P/23-B***] has directed to store lubricating oil in safe cabinets. Relevant extract of the said report is reproduced as follows:

> ***"6.5.5 Handling of Flammables and Gas Cylinders***
> *Observation: Handling of lubricating oil, diesel, paint and thinner in small quantities has been found in Contractor office areas, MOT area, Hydrogen*

MAITHON POWER LIMITED

station.
Recommendation: Lubricating oil should be stored away and only should be transported by trolley as and when required. ***It is suggested that storage of this kind of bottles should be avoided or stored in safe cabinets".***

303. In order to increase the life of the critical spares in stores and to comply with above direction, the Petitioner has undertaken this scheme of "Store Renovation". Therefore, the Petitioner has procured Metal Pellets, Heavy duty Racking System, Heavy duty equipment (includes stacker and hydraulic trolley), oil drum racking with shed and heavy-duty racks.

304. Accordingly, it is humbly prayed before the Hon'ble Commission to allow additional capital expenditure of Rs. 341.06 lakh under Regulation 26(1)(b) and 26(1)(d) of the Tariff Regulations 2019.

x. Ash Weigh Bridge (100 MT)

305. The Petitioner humbly submits that as an endeavour to increase Ash Disposal in terms of the Notifications issued by the MoEFCC, the Petitioner, apart from Disposal through Rake and Hywas, is in a continual follow up with Major Cement Industries and Fly Ash Traders for Utilization of Fly Ash in Dry Form which involves incorporation of closed vessel Bulkers as a means of transport.

306. Notably, with the existing ash weighment infrastructure at the generating station, Small Capacity Bulkers up to 60 MT can only be weighed at the Ash WB 1 near Main Silo. However, with this kind of technical limitation, it was becoming a restriction for transporters to deploy Large Capacity Bulkers (whose Gross Weight can reach up to more than 100 MT) which was resulting in a loss of opportunity to dispose of Ash for Cement Utilization .

307. In view thereof, in order to increase the weighing capacity, the Petitioner has incurred an additional capital expenditure of Rs. 64.03 lakh in FY 2023-24 and,

MAITHON POWER LIMITED

accordingly, requests the Hon'ble Commission to allow the same under Regulation 26(1)(e) of the Tariff Regulations 2019.

xi. Solar Panel

308. It is submitted that in order to reduce existing consumption of Administrative Building from conventional sources, the Petitioner has installed 50 kWp solar Panels at a cost of Rs. 38.40 Lakh in FY 2023-24.

309. Therefore, it is humbly prayed before this Hon'ble Commission to approve the above expenditure under Regulation 26(1)(b) of Tariff Regulations 2019.

xii. Upgradation of protection system

310. It is submitted that a small amount of Rs. 0.05 Lakh has been spent in upgradation of protection system during FY 2020-21, which is requested to be approved by this Hon'ble Commission under Regulation 26(1)(b) of Tariff Regulations 2019.

311. Further, it is also relevant to note that of Regulation 7 and Regulation 51 of IEGC Regulations, 2023 explicitly mandate that all users shall comply with the applicable Regulations including the CEA Cyber Security Guidelines, 2021 [***Refer: Annexure P/17***]. Further, CEA Guidelines, 2021 in its Article 7 clearly mandate the Responsible Entity to ensure that its IT technologies in the Power System Equipment/System have the ability to be upgraded. The relevant regulation is presented below for reference -

> *"Article 7 Phasing out of Legacy System*
> *a) As the life cycle of the Power System Equipment/System is longer than that of IT Systems deployed therein, the Responsible Entity shall ensure that all IT technologies in the Power System Equipment/System should have the ability to be upgraded."*

Accordingly, it is requested that this Hon'ble Commission may allow the same.

xiii. Testing Instruments

312. The Petitioner humbly submits that expenditure on testing instruments was

MAITHON POWER LIMITED

approved in True-up of 2014-19 period under Regulation 14(3)(ii) of Tariff Regulations 2019 in para 58 of Tariff order dated 08.01.2022. While major part of procurement was done in the said period, some instruments were procured in FY 2019-20 at total cost of Rs. 20.15 Lakh. Accordingly, this Hon'ble Commission is requested to allow the same under Regulation 26(1)(b) of Tariff Regulations 2019.

xiv. Augmentation of Fire Detection System

313. It is humbly submitted that with expected commencement of crushed coal supply by Railway transportation in FY 2021-22, increased quantum of crushed coal movement to coal yard was envisaged. This movement increased the risk of conveyors catching fire due to more coal dust and friction of crushed coal with conveyor.

314. In this regard, the National Safety Council (NSC) by its Report dated 16-19th March 2021 (***Refer ANNEXURE P/23-B***), had recommended the review of existing Smoke Detection System after any change in process. Following are the relevant extracts of the said Report:

> *"6.9*
> ***FIRE DETECTION AND ALARM SYSTEM***
> *Observation*
> *:.....*
> *It is found that, Panel provided for the detection system is with on off system. Incase of closure, system will not gives any alarm in emergency.*
> *.....*
> *Recommendation:*
> *.....*
> *Review of smoke detector and manual call points should be carried out after any change in process/building.*
> *....."*

315. Further, considering the fact that there were few incidents of fire at coal yard in the past, an analysis of the existing system was undertaken with the changed process with higher crushed coal and a new fire-detection system at coal yard was

installed. Fire Detection system along the conveyors of CHP is a crucial requirement for prevention of fire hazards in the Coal Handling Plant. The automatic fire detection system installed will detect fire on occurrence along the conveyors and will initiate activation of fire-fighting system. Therefore, for this important safety requirement installation of Fire Detection System was undertaken by the Petitioner for compliance of existing law as well as directions of NSC.

316. Accordingly, the Petitioner humbly requests the Hon'ble Commission to allow the additional capital expenditure of Rs. 23.72 lakh under Regulation 26(1)(b) and 26(1)(d) of Tariff Regulations, 2019.

Re. DECAPITALIZATION

317. The Regulation 26(2) of the Tariff Regulations 2019 states as follows:

> *"(2) In case of de-capitalisation of assets of a generating company or the transmission licensee, as the case may be, the original cost of such asset as on the date of decapitalisation shall be deducted from the value of gross fixed asset and corresponding loan as well as equity shall be deducted from outstanding loan and the equity respectively in the year such de-capitalisation takes place with corresponding adjustments in cumulative depreciation and cumulative repayment of loan, duly taking into consideration the year in which it was capitalised."*

318. It is submitted that in terms of Regulation 26(2) of Tariff Regulations 2019, the Petitioner has furnished the details of items decapitalized in books for the period 2019-24 in Form I of the Tariff Forms. A copy of the Auditor's Certificate certifying the details of decapitalization of Property, Plant & Equipment (PPE) during financial years 2019-20 to 2023-24 for the Petitioner Generating Station is annexed herewith and marked as **ANNEXURE-P/33**. The summary of the decapitalization as per Books and in terms of Auditors Certificate is tabulated as follows:

Table 10: Summary of Decapitalization as per Books for 2019-24

Particulars	2019-20	2020-21	2021-22	2022-23	2023-24
Decapitalization	68.48	27.62	76.61	1,005.90	1,888.46

319. However, the decapitalization of the assets which were not part of admitted capital cost and assets which are being claimed under Capital Spare on net basis (i.e., after removing residual value) have been excluded for the purpose of Tariff.

320. As regards the assets not forming part of the admitted capital cost, the Petitioner submits exclusion of Rs. 21.09 lakh in FY 2019-20, Rs. 10.61 lakh in FY 2020-21, Rs. 9.54 lakh in FY 2021-22, Rs. 54.54 lakh in FY 2022-23 and Rs. 45.56 lakh in FY 2023-24 towards decapitalizations of IT equipment's and Minor Admin Assets which were not considered by the Hon'ble Commission under Actual Capital Expenditure beyond the Cut-off date i.e., 31.03.2015 for the Petitioner's project.

321. As regards the assets being claimed under Capital Spares on net basis, the Petitioner submits that Capital Spares have been claimed excluding the residual value i.e., 10% of the total value of the Capital Spares in terms of the findings by the Hon'ble Commission in the tariff order dated 08.01.2022. The relevant excerpts of the Order are reproduced below for kind reference.

> *"143.....*
> *Further, we are of the view that spares do have a salvage value. Accordingly, in line with the practice of considering the salvage value, presumed to be recovered by the Petitioner on sale of other capital assets, on becoming unserviceable, the salvage value of 10% has been deducted from the cost of capital spares considered above, for the 2014-19 tariff period. Therefore, on prudence check of the information furnished by the Petitioner in Form-17 and on applying the said ceiling limit along with deduction of the salvage value @10%, the net capital spares allowed in terms of Regulation 29(2) of 2014 Tariff Regulations is as follows:..."*

322. Pursuant to aforesaid findings, salvage value amounting to Rs. 646.15 lakh for the period 2019-24 has already been deducted from the gross value of the Capital

MAITHON POWER LIMITED

Spares and, therefore, decapitalization of Rs. 294.06 lakh in FY 2022-23 and Rs. 333.27 lakh in FY 2023-24 have been excluded towards decapitalizations of assets which are being claimed under capital spares on net basis for the purpose of tariff.

323. Moreover, the Petitioner humbly submits that out of the proposed decapitalization in the Table below, items amounting to about Rs. 123 lakh are those items which after repair shall be retained and used as spare on rotation basis. Such items have future economic value and need not be decapitalized for the purpose of tariff.

324. Accordingly, the following decapitalization has been considered for the purpose of tariff for the period 2019-24:

Table 11: Summary of Net Decapitalization for 2019-24

Particulars	2019-20	2020-21	2021-22	2022-23	2023-24
Decapitalization as per Books	68.48	27.62	76.61	1,005.90	1,888.46
Less Decapitalization- Not Part of admitted cost	21.09	10.61	9.54	54.54	45.56
Less Decapitalization - Assets claimed under capital spares				294.06	333.27
Net Decapitalization	47.39	17.01	67.07	657.31	1509.63

325. The Petitioner humbly requests that in the event if certain additional capital expenditures are not being considered by the Hon'ble Commission after prudence check, the decapitalization corresponding to said ACE may kindly be excluded for the purpose of tariff. This shall avoid double deduction from admitted capital cost and the same would be fair and just.

Re. UN-DISCHARGED LIABILITY and DISCHARGES FOR 2019-24

326. The Petitioner humbly submits that for arriving at the Cash Capitalization for each year of the Tariff Period, the Petitioner has worked out Net Discharge by adjusting

the difference between the undischarged liabilities (UDL) as on opening of the financial year (FY) i.e., 1st April of the FY and as on closing of the FY i.e., 31st March of the FY. A copy of the Auditor's Certificate certifying the scheme wise closing UDL for the years 2019-20 to 2023-24 for the Petitioner's Generating Station is enclosed hereto and marked as **ANNEXURE-P/34 (COLLY.).** Further, the closing UDL against capital cost as on 31.03.2019/ or in other words Opening UDL as on 01.04.2019 is nil for the Petitioner's Generating Station.

Re. ***EXCLUSION***

327. The Petitioner humbly submits that following exclusions have been claimed under different heads vide Form-9D of the Tariff Formats against the actual capitalizations/ decapitalizations/ liabilities as per Books of accounts:

Table 12: Exclusions for the Period 2019-24

Sr. No	Head of Work / Equipment	Additional Capital Expenditure claimed under exclusion				
		2019-20	2020-21	2021-22	2022-23	2023-24
i	Capitalisation towards Railway Package*	2524.68	60883.18			
ii	Undischarged Liability towards Railway Package	10.14	6566.87			
iii	Employee Vehicle Purchase not part of Admitted capital cost				73.34	77.98

*Claimed for capitalization in FY 2021-22.

Re. Capitalization towards Railway Package

328. The Petitioner submits exclusion of Rs. 2524.68 lakh in FY 2019-20 and Rs. 60883.18 lakh in FY 2020-21 towards items Capitalized in Books of Accounts under 'Railway Package' as these assets could only be put to use in FY 2021-22 for

MAITHON POWER LIMITED

reasons beyond the control of the Petitioner as elaborated under the Section for Capitalization of Railway Project. Accordingly, the Petitioner though recognized the capitalization in the book of accounts but the same are being claimed only from the year it is actually put to use i.e. FY 2021-22. The Petitioner has, therefore, excluded the said amount in FY 2019-20 and FY 2020-21 while claiming the same in FY 2021-22 for the purpose of tariff computation.

Re. Undischarged liability towards Railway Package

329. The Petitioner submits exclusion under Un-discharged liabilities towards Railway Package of Rs. 10.14 lakh in 2019-20 and Rs. 6566.87 lakh in 2020-21 since the same were recognized in the book of account in the respective year against actual capitalization as per books of account. However, as described above, the actual Asset of Railway Package was put to use and claimed only in FY 2021-22 due to reasons beyond the control of the Petitioner. Thus, since the undischarged liability closing March'20 & March'21 pertains to the period prior to the date of put to use or capital cost being claimed, the same has been excluded by the Petitioner for the purpose of tariff computation for the period 2019-20 and 2020-21. Closing liability as on March'22 onwards has duly been considered for tariff computation.

Re. Employee Vehicle Purchase

330. The Petitioner has procured vehicles for its employees amounting to Rs. 73.34 lakh in 2022-23 and Rs. 77.98 lakh in 2023-24. As the capitalization of such assets procured after the cut-off date of the generating station is not allowed for the purpose of tariff, the Petitioner has excluded the said amount.

Re. NORMATIVE IDC ON EXCESS EQUITY FOR 2019-24

331. With regard to the claim of Normative IDC, it may kindly be noted that the Hon'ble Commission in Petitioner's case had allowed Normative IDC for the Period 2014-

19 vide order dated 08.01.2022 in Petition No. 408/GT/2020 with certain observations regarding furnishing of Auditor Certified normative IDC or date of infusion of funds, applicable interest rates etc. The relevant extracts of the order are provided below for the reference of the Hon'ble Commission:

> *"111. We have considered the submissions of the Petitioner. It is noticed that the Petitioner has neither submitted the normative IDC, duly certified by Auditors, nor the date of infusion of funds, the corresponding dates of capitalisation, the applicable interest rates etc. and their supporting documents, if any. Hence, in the absence of the aforesaid information, we have worked out the normative IDC based on assumptions as follows:*
>
> *a. Infusion of funds has been assumed to be at the beginning of the year of additional capital expenditure incurred;*
>
> *b. Date of capitalisation has been assumed to be at the mid of the year; and*
>
> *c. Weighted Average Rate of Interest (WAROI) on actual loan of respective years have been applied for calculation of normative IDC of respective years"*

332. Accordingly, in compliance with the observations of the Hon'ble Commission, the Petitioner in the instant Petition is providing the below details duly certified by the Statutory Auditors which are in accordance with Form-R of the Tariff Filing Forms and required for computing the actual cash expenditure or in other words infusion of funds on quarterly basis.

(a) Expenditure towards Capital Work In Progress (CWIP): Opening and closing CWIP at the beginning and closing of each quarter covering addition to CWIP and reduction of Capitalisation from CWIP (i.e., Amounts which are capitalized and moved to Gross block).

(b) Capital Advances: Opening and Quarter end closing position of Advances paid to vendors towards Capital Assets, if any.

(c) Un-discharged Liabilities: Opening and Quarter end closing liabilities towards CWIP.

333. With the above data and following the approach provided in Form-R the Petitioner has computed the closing quarterly expenditure by deducting capitalization performed during the quarter (i.e., +Addition to CWIP (Opening + quarterly additions) - Capitalization in each quarter). Thereafter, the Petitioner arrived at the actual cash expenditure at the end of each quarter by adding Capital Advances, if any, and subtracting the liabilities towards CWIP from closing CWIP.

334. Further, for computing the Normative IDC, the Petitioner has considered 70% of the Actual Cash Expenditure as Normative loan since the Capex have been funded only through internal resources/equity and without obtaining any actual loan and capitalizing any IDC in books of account in respect of these Additional Capital Expenditure. Actual Cash Expenditure during the quarter has been obtained by averaging Opening and Closing Cash Expenditure incurred towards CWIP in line with the approach being followed by this Hon'ble Commission for arriving at the Average Equity or Loan while computing Return on Equity or Interest on Loan.

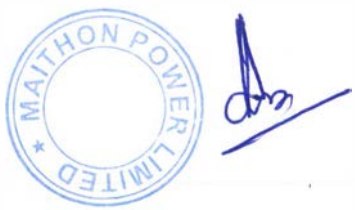
335. Finally, such normative loan for each quarter is multiplied with the claimed Weighted Average Rate of Interest on Long Term actual loan for that year and intervening period as ¼ of the year to arrive at the quarterly IDC. Sum total of such Normative IDC for the year is claimed as Normative IDC and is added to Gross Block in accordance with Tariff Regulations 2019.

336. It is prayed that the Hon'ble Commission may kindly approve the above Normative IDC computed by the Petitioner which is mainly following the steps indicated in Form R of the Tariff Filing Formats and based on data duly certified by the Statutory Auditors for computation of Normative IDC and to include the same as the Additional Capitalisations towards the various assets capitalized during 2019-24. Accordingly, in view of above, the Petitioner has claimed normative IDC of Rs

206.20 lakh for the period 2019-24 towards Capex Schemes other than Railway Package, out of which Rs. 84.43 lakh is for FY 2019-20, Rs. 55.62 lakh in FY 2020-21, Rs. 12.44 lakh in FY 2021-22, Rs. 16.2 lakh in FY 2022-23 and Rs. 37.51 lakh in FY 2023-24. A copy of the Auditor certificates certifying the quarterly Capital Work in Progress and Capital Advances for the period FY 2019-20 to FY 2023-24 for Capex Schemes with segregated closing balances for Railway System, FGD, Schemes other Railway Package etc are enclosed herewith and marked as **ANNEXURE-P/35A (COLLY.)**. A copy of the Certificate dated 12.12.2024 for undischarged liability which also captures liabilities towards certain capex items along with subsequent Certificate dated 27.01.2025 summarizing scheme-wise UDL and above requisite clarifications are already enclosed as Annexure-P/34. A copy of the Computation of Normative IDC for Capex Schemes (excluding Railway) is annexed herewith and marked as **ANNEXURE-P/35 B**.

Re. Normative IDC on Railway System

337. It is humbly submitted that for calculation of Normative IDC on Railway assets the Petitioner has followed the same approach as elaborated in the above paragraphs. Since Railway Capex has been funded through both internal resources/equity in excess of 30% and actual loan, the Petitioner for arriving at the Normative IDC has first computed total IDC from inception till date of put to use considering 70% of the Actual Cash Expenditure in each quarter as loan without segregating the same into actual loan or normative loan and then multiplied the same with the approved/claimed Weighted Average Rate of Interest on Long Term actual loan for that year and intervening period as ¼ of the year. Thus, from the total IDC as described above, the Petitioner removed the actual IDC capitalized in books of account to arrive at the Normative IDC. Accordingly, the Petitioner has claimed



total IDC of Rs 18391.61 lakh in FY 2021-22 towards 'Railway Package', out of which IDC of Rs. 9384.70 lakh has been capitalized in books and IDC of Rs. 9006.91 lakh is towards Normative IDC. Further, it is relevant to mention that vide Order dated 08.01.2022, the Hon'ble Commission in total has allowed IDC of about 15429.38 lakh and increase in the claim of IDC is mainly on account of delay from March'21 to March'22 for reasons beyond the control of the Petitioner as explained in detail in section of "Railway System". Further, The Auditor certificates certifying quarterly Capital Works in Progress and Undischarged liabilities for the period since inception to March'22 for Railway Package are enclosed herewith and marked as **ANNEXURE-P/36A (COLLY).** The Computation of Normative IDC for Railway System is enclosed hereto and marked as **ANNEXURE P/36 B** for kind consideration of the Hon'ble Commission.

Re. CAPITAL COST CLAIMED FOR 2019-24

338. As already stated, the Petitioner has considered closing capital cost of Rs. 479376.83 lakh as on 31.3.2019 as approved by this Hon'ble Commission vide order dated 13.12.2022 in Review Petition No. 4/RP/2022 in Petition No. 408/GT/2020 as opening capital cost as on 01.04.2019.

339. The following table summarizes capital cost considered as on 01.04.2019, Additional Capital Expenditure, Normative IDC on Excess Equity, Normative IDC on Actual Loan, decapitalisation considered and discharges made during the respective years from 2019-20 to 2023-24.

Table 13: Gross Block over Period FY 2019-20 to FY 2023-24 (Rs. Lakh)

S. No.	Particulars	2019-20	2020-21	2021-22	2022-23	2023-24
1	Opening Capital Cost	479376.83	481467.64	483906.52	559419.75	562538.93

2	Add: Addition during the year/period	2151.03	2441.37	68424.86	3154.32	9440.28
3	Less: De-capitalisation during the year/period	47.39	17.01	67.07	657.31	1509.63
4	Add: Undischarge Liability as on 1st April of each year	0.00	97.26	138.37	2002.28	1396.28
5	Less: Undischarge Liability as on end of each year	97.26	138.37	2002.28	1396.28	6624.68
6	Less: Reversal during the year / period	0.00	0.00	0.00	0.00	0.00
7	Add: Normative IDC on Excess Equity excluding Railways	84.43	55.62	12.44	16.18	37.51
8	Add: Normative IDC on Excess Equity Railways	0.00	0.00	9006.91	0.00	0.00
9	Closing Capital Cost	481467.64	483906.52	559419.75	562538.93	565278.70
10	**Average Capital Cost**	480422.24	482687.08	521663.13	560979.34	563908.81

340. Based on the above, the closing capital cost claimed as on 31.3.2024 is Rs. 565278.70 lakh.

Re. ANNUAL FIXED CHARGES FOR 2019-24

341. The Annual Fixed Charges comprise of the following components:

(a) Return on Equity;

(b) Interest on Loan;

(c) Depreciation;

(d) O&M Expenses; and

(e) Interest on Working Capital.

Re. RETURN ON EQUITY

342. Regulation 30 of the Tariff Regulations 2019 stipulates the following norms for Return on Equity.

> *"**30. Return on Equity**: (1) Return on equity shall be computed in rupee terms, on the equity base determined in accordance with Regulation 18 of these regulations.*
> *(2) Return on equity shall be computed at the base rate of 15.50% for thermal generating station, transmission system including communication system and run-of river hydro generating station, and at the base rate of 16.50% for the storage type hydro generating stations including pumped storage hydro generating stations and run-of river generating station with pondage:*
> *Provided that return on equity in respect of additional capitalization after cut-off date beyond the original scope excluding additional capitalization due to Change in Law, shall be computed at the weighted average rate of interest on actual loan portfolio of the generating station or the transmission system;*
> *Provided further that:*
> *i. In case of a new Project, the rate of return on equity shall be reduced by 1.00% for such period as may be decided by the Commission, if the generating station or transmission system is found to be declared under commercial operation without commissioning of any of the Restricted Governor Mode Operation (RGMO) or Free Governor Mode Operation (FGMO), data telemetry, communication system up to load dispatch center or protection system based on the report submitted by the respective RLDC;*
> *ii. in case of existing generating station, as and when any of the requirements under (i) above of this Regulation are found lacking*

based on the report submitted by the concerned RLDC, rate of return on equity shall be reduced by 1.00% for the period for which the deficiency continues;

iii. in case of a thermal generating station, with effect from 1.4.2020:

a) rate of return on equity shall be reduced by 0.25% in case of failure to achieve the ramp rate of 1% per minute;

b) an additional rate of return on equity of 0.25% shall be allowed for every incremental ramp rate of 1% per minute achieved over and above the ramp rate of 1% per minute, subject to ceiling of additional rate of return on equity of 1.00%:

Provided that the detailed guidelines in this regard shall be issued by National Load Dispatch Centre by 30.6.2019.

31. Tax on Return on Equity. *(1) The base rate of return on equity as allowed by the Commission under Regulation 30 of these regulations shall be grossed up with the effective tax rate of the respective financial year. For this purpose, the effective tax rate shall be considered on the basis of actual tax paid in respect of the financial year in line with the provisions of the relevant Finance Acts by the concerned generating company or the transmission licensee, as the case may be. The actual tax paid on income from other businesses including deferred tax liability (i.e. income from business other than business of generation or transmission, as the case may be) shall be excluded for the calculation of effective tax rate.*

(2) Rate of return on equity shall be rounded off to three decimal places and shall be computed as per the formula given below:

Rate of pre-tax return on equity = Base rate / (1-t)

Where "t" is the effective tax rate in accordance with clause (□) of this Regulation and shall be calculated at the beginning of every financial year based on the estimated profit and tax to be paid estimated in line with the provisions of the relevant Finance Act applicable for that financial year to the company on pro-rata basis by excluding the income of non-generation or non-transmission business, as the case may be, and the corresponding tax thereon. In case of generating company or transmission licensee paying Minimum Alternate Tax (MAT), "t" shall be considered as MAT rate including surcharge and cess.

Illustration-

(i) In case of a generating company or a transmission licensee paying Minimum Alternate Tax (MAT) @ 21.55% including surcharge and cess:

Rate of return on equity = 15.50/(1-0.2155) = 19.758%

(ii) In case of a generating company or a transmission licensee paying normal corporate tax including surcharge and cess:

(a) Estimated Gross Income from generation or transmission business for FY 2019-20 is Rs 1,000 Crore;

(b) Estimated Advance Tax for the year on above is Rs 240 Crore;

(c) Effective Tax Rate for the year 2019-20 = Rs 240 Crore/Rs 1000 Crore = 24%;

(d) Rate of return on equity = 15.50/ (1-0.24) = 20.395%.

(3) The generating company or the transmission licensee, as the case may

MAITHON POWER LIMITED

be, shall true up the grossed up rate of return on equity at the end of every financial year based on actual tax paid together with any additional tax demand including interest thereon, duly adjusted for any refund of tax including interest received from the income tax authorities pertaining to the Tariff period 2019-24 on actual gross income of any financial year. However, penalty, if any, arising on account of delay in deposit or short deposit of tax amount shall not be claimed by the generating company or the transmission licensee, as the case may be. Any under-recovery or over-recovery of grossed up rate on return on equity after truing up, shall be recovered or refunded to beneficiaries or the long term customers, as the case may be, on year to year basis."

343. The Return on Equity (Pre-Tax) as approved by the Hon'ble Commission *vide* its Order dated 08.01.2022 in Petition No. 408/GT/2020 is shown in the following Tables:

Table 14: Approved Return on Equity at base rate for works within the original scope of Project (Rs. Lakh)

2019-20	2020-21	2021-22	2022-23	2023-24
27083.53	29077.29	30933.29	30878.74	30857.54

Table 15: Approved Return on Equity at WAROI for additional capitalization beyond the original scope of Project (excluding additional capital expenditure due to change in law) (Rs. Lakh)

2019-20	2020-21	2021-22	2022-23	2023-24
25.47	75.73	111.35	126.83	136.69

Table 16: Total Approved Return on Equity for the generating station (Rs. Lakh)

2019-20	2020-21	2021-22	2022-23	2023-24
27109.00	29153.01	31044.64	31005.56	30994.24

344. Based on the above quoted Regulations, the opening Equity base for the 2019-24 tariff period pertaining to the Petitioner's Generating Station has been arrived at corresponding to the closing Equity as on 31.03.2019 along with equity additions during 2019-24 period and RoE has been computed accordingly. Since all additional capitalisation, & other than Railways, have been done with internal

accruals and Railways has been funded with debt less than 70%, the debt: equity ratio has been considered as 70:30.

345. With regard to grossing up of ROE, it is submitted that the Hon'ble Commission has determined the ROE for admitted additional capital expenditure items within the original scope, by grossing the base rate of return on equity with the effective tax rate. However, while calculating the ROE for admitted additional capital expenditure items beyond the original scope, the Hon'ble Commission has not grossed up WAROI, with the effective tax rate. The Hon'ble Commission in the Order dated 08.01.2022 has inadvertently erred in not grossing up the Return on Equity (ROE) at the weighted average rate of interest (WAROI) for the purpose of tariff. The Commission in the said Order in Petition No. 408/GT/2020 observed as under:

> "252. Regulation 31 of the 2019 Tariff Regulations provides for grossing up of the base rate and does not provide for grossing up of weighted average rate of interest to be used for ROE for additions beyond the original scope of the project. Accordingly, in line with Regulation 31 of the 2019 Tariff Regulations, ROE has been allowed as under:
> ..."

346. The Petitioner humbly submits that Regulation 30 (as amended vide First Amendment to Tariff Regulations 2019) read with Regulation 31 provides for grossing up of base ROE with effective tax rate and the same has apparently escaped the attention of the Hon'ble Commission, while passing the Order dated 08.01.2022 in Petition No. 408/GT/2020. The Commission in its subsequent Orders in 11/RP/2022 in Petition No. 401/GT/2020 and 34/RP/2022 in Petition No. 426/GT/2020 has acknowledged the inadvertent error and allowed the grossing up for Return on Equity at WAROI Rate. Accordingly, the Petitioner has grossed-up the rate of return on equity for computation of tariff for the additional

capitalization both under Original Scope of Work and beyond the Original Scope of Work.

347. It is humbly submitted that the Petitioner has paid tax at MAT Rate during 2019-24 and the same has been considered as effective Tax Rate for the purpose of Grossing-up of the Rate of Return. Further, based on the Additional Capitalization during 2019-24, as discussed in the above sub-sections, the computation of actual RoE (Pre-Tax) for Assets under the Original Scope of Work and Assets beyond the Original Scope of Work for the Tariff Period 2019-24 pertaining to the Petitioner Generating Station has been tabulated as follows:

Table 17: RoE during 2019-24 – Assets capitalized under Original Scope of Work (Rs. Lakh)

Particulars	2019-20	2020-21	2021-22	2022-23	2023-24
Net Opening Equity (Normal)	143813.05	144311.74	144809.78	167191.67	167923.17
Add: Increase in equity due to addition during the year / period	512.91	503.14	22402.01	928.70	822.18
Less: Decrease due to De-capitalisation during the year / period	14.22	5.10	20.12	197.19	452.89
Less: Decrease due to reversal during the year / period	0.00	0.00	0.00	0.00	0.00
Add: Increase due to discharges during the	0.00	0.00	0.00	0.00	0.00

year / period					
Net closing Equity (Normal)	144311.74	144809.78	167191.67	167923.17	168292.46
Average Equity (Normal)	144062.40	144560.76	156000.73	167557.42	168107.82
Base Rate of Return on Equity (%)	15.50%	15.50%	15.50%	15.50%	15.50%
Effective Tax Rate (%)	17.47%	17.47%	17.47%	17.47%	17.47%
Rate of ROE (%)	18.78%	18.78%	18.78%	18.78%	18.78%
Total ROE	**27057.80**	**27151.40**	**29300.06**	**31470.64**	**31574.01**

Table 18: RoE during 2019-24 – Assets capitalised beyond the Original Scope of Work (excluding additional capital expenditure due to change in law) (Rs. lakh)

Particulars	**2019-20**	**2020-21**	**2021-22**	**2022-23**	**2023-24**
Net Opening Equity (Normal)	-	128.55	362.18	634.25	838.51
Add: Increase in equity due to addition during the year / period	128.55	233.63	272.08	204.25	452.64
Less: Decrease due to De-capitalisation during the year / period	0.00	0.00	0.00	0.00	0.00
Less: Decrease due to reversal during the year / period	0.00	0.00	0.00	0.00	0.00
Add: Increase due to discharges during the year / period	0.00	0.00	0.00	0.00	0.00

Particulars	2019-20	2020-21	2021-22	2022-23	2023-24
Net closing Equity (Normal)	128.55	362.18	634.25	838.51	1,291.15
Average Equity (Normal)	64.27	245.36	498.21	736.38	1,064.83
WAROI	8.32%	8.05%	7.72%	8.12%	8.93%
MAT Rate	17.47%	17.47%	17.47%	17.47%	17.47%
Rate of ROE (%)	10.08%	9.75%	9.36%	9.84%	10.82%
Total ROE	**6.48**	**23.93**	**46.62**	**72.48**	**115.16**

348. The Petitioner, therefore, humbly requests the Hon'ble Commission to allow the actual Return on Equity (Pre-Tax) on Original and Beyond the Original Scope of work as claimed in the above tables for the 2019-24 tariff period.

Re. INTEREST ON LOAN

349. Regulation 32 of the Tariff Regulations 2019 stipulates the following norms for Interest on Loan:

> 32. *Interest on loan capital: (1) The loans arrived at in the manner indicated in Regulation 18 of these regulations shall be considered as gross normative loan for calculation of interest on loan.*
> *(2) The normative loan outstanding as on 1.4.2019 shall be worked out by deducting the cumulative repayment as admitted by the Commission up to 31.3.2019 from the gross normative loan.*
> *(3) The repayment for each of the year of the tariff period 2019-24 shall be deemed to be equal to the depreciation allowed for the corresponding year/period. In case of de-capitalization of assets, the repayment shall be adjusted by taking into account cumulative repayment on a pro rata basis and the adjustment should not exceed cumulative depreciation recovered upto the date of de-capitalisation of such asset.*
> *(4) Notwithstanding any moratorium period availed by the generating company or the transmission licensee, as the case may be, the repayment of loan shall be considered from the first year of commercial operation of the project and shall be equal to the depreciation allowed for the year or part of the year.*
> *(5) The rate of interest shall be the weighted average rate of interest calculated on the basis of the actual loan portfolio after providing appropriate accounting adjustment for interest capitalized:*

Provided that if there is no actual loan for a particular year but normative loan is still outstanding, the last available weighted average rate of interest shall be considered;

Provided further that if the generating station or the transmission system, as the case may be, does not have actual loan, then the weighted average rate of interest of the generating company or the transmission licensee as a whole shall be considered.

(6) The interest on loan shall be calculated on the normative average loan of the year by applying the weighted average rate of interest.

(7) The changes to the terms and conditions of the loans shall be reflected from the date of such re-financing."

350. The Interest on Long Term Loan as approved by the Hon'ble Commission *vide* its Order dated 08.01.2022 in Petition No. 408/GT/2020 in terms of Regulation 32 of the Tariff Regulations 2019 is shown in the following Table:

Table 19: Interest on Loan during 2019-24 Approved in Order dated 08.01.2022 in Petition No. 408/GT/2020 (Rs. lakh)

2019-20	2020-21	2021-22	2022-23	2023-24
14094.35	14216.55	14014.45	11573.71	9133.87

351. Further, the Petitioner has claimed the Weighted Average Rate of Interest for the computation of Interest on Loan on the basis of Loan Portfolio during the year and the applicable interest rate. The detailed computation of the Weighted Average Rate of Interest on Loan has been furnished in Tariff Application Form 13. A copy of the Auditor's Certificate certifying the loan movement with interest for the years 2019-20 to 2023-24 for the Petitioner's Generating Station is enclosed hereto and marked as **ANNEXURE-P/37A.** Accordingly, the following table shows the computation of actual Interest on Loan for the period 2019-24. Interest on Loan has been computed by applying Rate of Interest on the Average Loan for the year which has been arrived at after considering the Opening Balance for the year,

Debt component of Additional Capitalization, Deemed Repayment of the Loan (Annual Depreciation) and Closing Balance derived therefrom:

Table 20: Interest on Loan During 2019-24 (Rs. lakh)

Particulars	2019-20	2020-21	2021-22	2022-23	2023-24
Gross loan – Opening	3,35,563.78	3,37,027.35	3,38,734.56	3,91,593.82	3,93,777.25
Cumulative repayments of Loans upto previous year	1,64,754.01	1,88,300.14	2,11,971.00	2,37,197.40	2,64,159.04
Net loan – Opening	1,70,809.77	1,48,727.21	1,26,763.56	1,54,396.42	1,29,618.21
Add: Drawl(s) during the Year	1,496.74	1,719.12	52,906.21	2,643.55	2,974.58
Deletion during the year (70% of de-cap)	47.39	17.01	67.07	657.31	1,509.63
Less: Decrease due to de-capitalisation during the year/period	33.18	11.91	46.95	460.12	1,056.74
Less: Repayment (s) of Loans during the year	23,564.71	23,678.33	25,256.89	27,271.52	27,773.39
Net loan – Closing	1,48,727.21	1,26,763.56	1,54,396.42	1,29,618.21	1,04,544.19
Average Net Loan	1,59,768.49	1,37,745.38	1,40,579.99	1,42,007.32	1,17,081.20
Weighted Average Rate of Interest	8.32%	8.05%	7.72%	8.12%	8.93%
Total Interest	**13292.43**	**11086.83**	**10855.94**	**11535.36**	**10450.13**

352. The Petitioner, therefore, humbly requests the Hon'ble Commission to allow the actual Interest on Loan as claimed in the above table for the 2019-24 tariff period.

Re. Refinancing of Term Loan:

353. With regard to refinancing of Term Loan, it is re-iterated that the Petitioner signed

the Common Loan Agreement ('CLA') on 04.02.2008 with the consortium of 17 lenders with State Bank of India (SBI) as the lead lender for funding the Project. As per Schedule IV of the revised CLA the Rate of Interest of the Loan is defined as 2.75% spread over the prevalent SBI Base Rate to be reset on the annual reset date of 3rd March. The rate of interest worked out as per the CLA would accordingly be as under:

Interest Rate as per Original Term Loan	**2019-20**	**2020-21**	**2021-22**	**2022-23**	**2023-24**
Rate of Interest	11.75%	11.11%	10.07%	10.45%	12.22%

354. The Petitioner, being a prudent utility, in an effort to bring down the cost of debt, made refinancing efforts 4 times through various funding sources upto March'2019 and every time it was successful in bringing down the cost of debt, effectively bringing the interest rate down for each financial year. The details of each of the refinancing has been provided in the previous tariff petition filed by the Petitioner and gains arising out of the said refinancing have been shared accordingly with the beneficiaries in terms of the refinance rate or the WAROI approved by the Hon'ble Commission in the Tariff Order dated 08.01.2022 for the period 2019-24 subject to true-up at actuals during true-up. In view of the increased creditworthiness of the Project and in an effort to bring down the cost of debt, the Petitioner further explored the opportunities to re-finance the Long-term Loan and, accordingly, was able to once again refinance the term loan in FY 2020-21. The Petitioner under the 5th Refinancing has refinanced part of the outstanding term loan by Rs. 22500.00 lakh Loan from AXIS Bank (5th Refinancing) and Rs. 19900 Lakh through NCD III issued in December 2020. The

weighted average rate of interest at refinanced rates (i.e., WAROI on actual loan) accordingly has been computed and claimed which works out as under:

WAROI claimed in True-up at Refinanced Rates	**2019-20**	**2020-21**	**2021-22**	**2022-23**	**2023-24**
Rate of Interest	8.32%	8.05%	7.72%	8.12%	8.93%

355. It is relevant to mention here that pending true-up for 2019-24, the savings arising due to variations in the provisionally approved refinanced rates/ WAROI vis-a-vis the actual rates including the cost of 5th refinancing are yet to be shared with the beneficiaries. As per the provisions of the Tariff Regulations 2019, the Petitioner proposes to share the remaining net benefit of the refinancing in the prescribed ratio with the beneficiary post truing up of the interest rate considered in aforesaid section of this Petition where the interest expense claim has been discussed. Copies of the supporting documents of the cost of refinancing of Rs. 429.18 Lakh have been provided under **ANNEXURE- P/37B (COLLY.)** of the instant Petition for the kind perusal of the Hon'ble Commission.

Re. DEPRECIATION

356. Regulation 33 of the Tariff Regulations 2019 stipulates the following norms for Depreciation,

> *"33. Depreciation: (1) Depreciation shall be computed from the date of commercial operation of a generating station or unit thereof or a transmission system or element thereof including communication system. In case of the Tariff of all the units of a generating station or all elements of a transmission system including communication system for which a single Tariff needs to be determined, the depreciation shall be computed from the effective date of commercial operation of the generating station or the transmission system taking into consideration the depreciation of individual units:*
> *Provided that effective date of commercial operation shall be worked out by considering the actual date of commercial operation and installed capacity*

of all the units of the generating station or Capital Cost of all elements of the transmission system, for which single Tariff needs to be determined.

(2) The value base for the purpose of depreciation shall be the Capital Cost of the asset admitted by the Commission. In case of multiple units of a generating station or multiple elements of a transmission system, weighted average life for the generating station of the transmission system shall be applied. Depreciation shall be chargeable from the first year of commercial operation. In case of commercial operation of the asset for part of the year, depreciation shall be charged on pro rata basis.

(3) The salvage value of the asset shall be considered as 10% and depreciation shall be allowed up to maximum of 90% of the Capital Cost of the asset:

Provided that the salvage value for IT equipment and software shall be considered as NIL and

100% value of the assets shall be considered depreciable;

Provided further that in case of hydro generating stations, the salvage value shall be as provided in the agreement, if any, signed by the developers with the State Government for development of the generating station:

Provided also that the Capital Cost of the assets of the hydro generating station for the purpose of computation of depreciated value shall correspond to the percentage of sale of electricity under long-term power purchase agreement at regulated Tariff:

Provided also that any depreciation disallowed on account of lower availability of the generating station or unit or transmission system as the case may be, shall not be allowed to be recovered at a later Stage during the useful life or the extended life.

(4) Land other than the land held under lease and the land for reservoir in case of hydro generating station shall not be a depreciable asset and its cost shall be excluded from the Capital Cost while computing depreciable value of the asset.

(5) Depreciation shall be calculated annually based on Straight Line Method and at rates specified in Appendix-I to these regulations for the assets of the generating station and transmission system:

Provided that the remaining depreciable value as on 31st March of the year closing after a period of 12 years from the effective date of commercial operation of the station shall be spread over the balance useful life of the assets.

(6) In case of the existing Projects, the balance depreciable value as on 1.4.2019 shall be worked out by deducting the cumulative depreciation as admitted by the Commission upto 31.3.2019 from the gross depreciable value of the assets.

(7) The generating company or the transmission licensee, as the case may be, shall submit the details of proposed capital expenditure five years before the

completion of useful life of the Project along with justification and proposed life extension. The Commission based on prudence check of such submissions shall approve the depreciation on capital expenditure.
(8) In case of de-capitalization of assets in respect of generating station or unit thereof or transmission system or element thereof, the cumulative depreciation shall be adjusted by taking into account the depreciation recovered in Tariff by the decapitalized asset during its useful services."

357. The Depreciation as approved by the Hon'ble Commission *vide* its Order dated 08.01.2022 in Petition No. 408/GT/2020:

Table 21: Summary of Depreciation Approved by the Hon'ble Commission vide Order dated 08.01.2022 in Petition No. 408/GT/2020 (Rs. lakh)

2019-20	2020-21	2021-22	2022-23	2023-24
24588.73	26492.50	28243.13	28223.66	28223.56

358. The Weighted Average Rate of Depreciation (WAROD) has been computed in accordance with 'Form 11' and the same has been considered for the purpose of computation of Depreciation for the period 2019-24 as shown in the Table below. A copy of the Certificate from Statutory Auditors dated 12.12.2024 regarding Gross Block of the Assets as per depreciation schedule in Tariff Regulations 2019 for financial years of the Tariff Period 2019-24 is annexed hereto and marked as **ANNEXURE P/38**.

However, since the Petitioner is proposing capitalization of Railway Project from March 2022, when it was put to use instead of March 2021 when it was capitalized in books, the Petitioner has worked out WAROD by excluding all capitalizations of Railway Project prior to March 2022 from GFA reflected in books and shifting all such capitalisations to March 2022. On the class-wise assets, the Petitioner has applied the rates specified in Tariff Regulations 2019 to compute WAROD.

359. Thereafter, Weighted Average Rate of Depreciation (WAROD) is multiplied by

Average Gross Block for the year adjusted with Average Gross Block of freehold land to arrive at the allowable depreciation for the year. The computation of depreciation is provided in the Table below:

Table 22: Depreciation for Tariff Period 2019-24(Rs. lakh)

Sl. No.	Particulars	2019-20	2020-21	2021-22	2022-23	2023-24
1	Opening Capital Cost	479376.83	481467.64	483906.52	559419.75	562538.93
2	Closing Capital Cost	481467.64	483906.52	559419.75	562538.93	565278.70
3	**Average Capital Cost**	**480422.24**	**482687.08**	**521663.13**	**560979.34**	**563908.81**
4	Freehold land	17513.13	17576.52	17639.91	17639.91	17639.91
5	Depreciable value @ 90%	416618.19	418599.50	453620.90	489005.49	491642.02
6	Rate of depreciation*	5.09%	5.09%	5.01%	5.02%	5.08%
7	Balance useful life at the beginning of the period	17.42	16.42	15.42	14.42	13.42
8	Balance depreciable value	251864.18	230299.36	241649.90	251808.09	227482.98
9	**Depreciation for the period**	**23564.71**	**23678.33**	**25256.89**	**27271.52**	**27773.39**
10	**Depreciation annualised**	**23564.71**	**23678.33**	**25256.89**	**27271.52**	**27773.39**
11	Cumulative depreciation at the end of the period	188318.72	211978.47	237227.90	264468.92	291932.43
12	De-capitalisation during the year	47.39	17.01	67.07	657.31	1,509.63
13	Less: Cumulative depreciation adjustments on account of de-capitalisation	18.58	7.47	30.50	309.88	781.53
14	Net Cumulative depreciation at the end of the period after adjustments	1,88,300.14	2,11,971.00	2,37,197.40	2,64,159.04	2,91,150.90

360. The Petitioner humbly requests the Hon'ble Commission to allow the actual Depreciation as claimed in the above table for the 2019-24 tariff period.

Re. OPERATIONAL NORMS

361. The Tariff Regulations 2019 stipulate various Operational Norms for generating units of different capacities and the recovery of Capacity Charges & Energy

Charges are subject to successful achievement of these Norms. The Petitioner has claimed Operational Parameters as defined in the Tariff Regulations 2019 with suitable relaxation in GSHR.

362. The following Sub-Section details the Operational Performance of the Generating Station during the Tariff Period 2019-24.

Re. Plant Availability

363. Regulation 49 (A) of the Tariff Regulations 2019 specifies the Normative Plant Availability as:

> *"Norms of operation for thermal generating station*
> *49. The norms of operation as given hereunder shall apply to thermal generating stations:*
> *(A) Normative Annual Plant Availability Factor (NAPAF)*
> *(a) All thermal generating stations, except those covered under clauses (b), (c), (d), & (e) – 85%"*

364. The Petitioner for the purpose of the tariff has computed Gross Generation for the 2019-24 tariff period at Normative Availability of 85% in line with the norms.

Re. Auxiliary Power Consumption

365. Norms for Auxiliary Power Consumption for thermal generating station as stipulated in the Tariff Regulations 2019:

> *"49. The norms of operation as given hereunder shall apply to thermal generating stations:*
> ...
> *(E) Auxiliary Energy Consumption:*
> *(a) For Coal-based generating stations except at (b) below:*

S. No.	*Generating Station*	*With natural Draft cooling tower or without cooling tower*
(i)	*200 MW series*	*8.50%*
(ii)	*300 MW and above*	
	Steam driven boiler feed pumps	*5.75%*
	Electrically driven boiler feed pumps	*8.00%*

Provided that for thermal generating stations with induced

draft cooling towers and where tube type coal mill is used, the norms shall be further increased by 0.5% and 0.8% respectively:"

366. Unit 1 & Unit 2 of the Generating Station fall under the category of 300 MW & above having Steam-driven Boiler Feed Pumps & Induced Draft Cooling Tower. Therefore, both Units qualify for a Normative Auxiliary Power Consumption of 6.25% (5.75% for Units having Steam driven BFP & additional 0.50% for having Induced Draft Cooling Tower).

Re. Gross Station Heat Rate

367. Regulation 49 (C)(b) of the Tariff Regulations 2019 provides Station Heat Rate for the thermal generating station having COD on or after 01.04.2009 as under:

"49 ...
(b) Thermal Generating Stations achieving COD on or after 1.4.2009:
(i) For Coal-based and lignite-fired Thermal Generating Stations:
1.05 X Design Heat Rate (kCal/kWh)
Where the Design Heat Rate of a generating unit means the unit heat rate guaranteed by the supplier at conditions of 100% MCR, zero percent make up, design coal and design cooling water temperature/back pressure."

368. The Hon'ble Commission, in its Order dated 19.11.2014 for the period 2011-2014, allowed a Station Heat Rate (SHR) of 2425 kCal/kWh due to inferior coal quality, although the Tariff Regulations 2009 set the normative SHR at 2360.47 kCal/kWh. In a subsequent Tariff Order dated 26.12.2017 for the period FY 2014-19, the Hon'ble Commission approved an SHR of 2375 kCal/kWh, considering the plant's actual Gross Station Heat Rate of 2377 kCal/kWh, boiler efficiency of 85.5%, and Turbine Heat Rate of 1945 kCal/kWh as per the Tariff Regulations 2014. The Hon'ble Commission approved a boiler efficiency of 85.5% achieved during PG tests with actual coal, noting the poor quality of coal received, compared to the 87.80% guaranteed by the OEM (BHEL) using design coal

369. The Hon'ble Commission, in its Tariff Order dated 08.01.2022 in Petition No.

408/GT/2020 (MYT 2019-24), approved a Station Heat Rate (SHR) of 2326.03 kCal/kWh, instead of the 2388 kCal/kWh claimed by the Petitioner. The relevant extract is reproduced below for the kind consideration of this Hon'ble Commission:

> *"305. The Petitioner has considered PG Test performance based on the quality of coal permissible to the Boiler and Plant characteristics. Also, the PPA was executed by the Petitioner based on demonstrable plant characteristics. The Boiler efficiency had undergone changes due to receipt of poor quality of coal in comparison to the quality envisaged at the time of PG test.* ***The deterioration of coal quality is temporary and cannot alter the plant characteristics on a perpetual basis. Coal is being procured by the Petitioner after execution of the Fuel Supply Agreement with the coal supplier. It was the obligation of the Petitioner, while entering into FSA, to ensure the desired quality of coal, by enforcing the provisions of FSA or by exploring any other alternate sources of coal.*** *The Petitioner, having not been prevented from exploring alternate source of coal, cannot, on a perpetual basis, be permitted to pass on the burden on the beneficiaries on this count, more so when the Petitioner has not fulfilled the said obligations. It is further noticed that the* ***Petitioner has not furnished any documentary evidence substantiating the efforts taken by it to ensure the good quality of coal. In our view, the relaxation of SHR of the generating station, in perpetuity, based on coal quality, will render the operational parameters specified under the 2019-24 Tariff Regulations for all generators redundant, as more often than not, the coal quality may no match with design coal.*** *In view of this, there is no merit in the prayer of the Petitioner for relaxation of SHR on grounds of deterioration in quality of coal.* ***The Petitioner is directed to ensure the required quality of coal as envisaged during the PG test. Accordingly, considering the operating margin of 5% as specified in Regulation 49I(b)(i) of the 2019 Tariff Regulations, the GSHR of the generating station works out as 2326.03 kcal/kWh [1945*1.05)/0.878] and the same is considered and allowed."***
>
> ***[Emphasis supplied]***

370. The Petitioner, aggrieved by the Order dated 08.01.2022 in Petition No. 408/GT/2020, raised the issue in a Review Petition. However, the Hon'ble Commission, in its Order dated 26.05.2022, did not admit the issue, stating that there was no infirmity in the Impugned Order. The Hon'ble Commission returned

the following findings on this issue:

> *"7. .... We observe from records that though the Petitioner, in Petition No.274/2010 (tariff for the period 2011-14) had sought relaxation in SHR norms to 2443 kcal/kWh (based on design heat rate), on the ground of inferior quality of coal being received,* ***the Commission by its order dated 19.11.2014 had relaxed the Heat Rate norm for this generating station as 2425 kcal/kWh (instead of SHR of 2443 kcal/kWh claimed), on the ground that the generating stations of NTPC have been allowed the same Heat Rate norm****. Similarly, in Petition No. 152/GT/2015 for the period 2014-19, the SHR of 2375 kcal/kwh as claimed by the Petitioner was approved by order dated 26.12.2017,* ***on the ground that the same was lesser than the GSHR allowed during the 2009-14 period****.*
>
> ...
>
> *9. Further, the submissions of the Review Petitioner, in support of relaxation of SHR, on the grounds that (i) .... etc., cannot also be considered, as these submissions of the Review Petitioner, touches upon the merits of the case. It is an established law that the scope of review proceedings is very limited. A review does not mean an appeal in disguise, whereby the matter is reheard on merit and the decision is taken afresh. A review lies only on account of patent error and not for rehearing. In our view, the acceptance of the submissions of the Review Petitioner would amount to reopening the impugned order on merit, which is beyond the scope of the review proceedings. Accordingly, the review of the impugned order on this count is not maintainable."*
>
> **[Emphasis Supplied]**

371. In this regard, it is submitted that the Petitioner being in a financial predicament due to the said order has filed an Appeal No.12 of 2022 before the Hon'ble APTEL, the decision of which is still pending.

372. Regarding the reasons based on which the Hon'ble Commission considered an SHR of 2326.03 kCal/kWh instead of 2388 kCal/kWh in the Order dated 08.01.2022 for Petition No. 408/GT/2020, the Petitioner would like to make the following submissions for consideration of this Hon'ble Commission:

Re: The deterioration of coal quality is temporary and cannot alter the plant characteristics on a perpetual basis. Such relaxation cannot be allowed in perpetuity.

373. It is humbly submitted that the Hon'ble Commission *vide* RoP of hearing dated 02.06.2020 in Petition No. 408/GT/2020 directed the Petitioner to furnish the actual coal quality (GCV, proximate and ultimate analysis) received in generating station during the year FY 2019-20. This information was submitted *vide* an additional affidavit dated 20.06.2020 and was considered by the Hon'ble Commission in Para 302 of the Tariff Order dated 08.01.2022 for 2019-24.

374. The Petitioner informed the Hon'ble Commission about the sub-optimal quality of coal in both the Petition and the additional affidavit dated 20.06.2020. The Hon'ble Commission, in Para 304, also noted that the coal quality for FY 2019-20 only improved efficiency by 0.05%, indicating no substantial change in coal quality.

375. The Petitioner humbly submits that it has no control over the quality of coal, which has neither improved nor is expected to improve in the future. Therefore, the Petitioner requests that the Hon'ble Commission to continue the same dispensation provided in earlier Orders and relax the SHR accordingly. With respect to Petitioner's generating station, it is most respectfully submitted that:

(a) There is no market for domestic coal supply in India, as coal supply companies are government-owned and hold a monopoly over supply. Consequently, the Petitioner has no control over the coal supply.

(b) The Petitioner states that the station is landlocked and depends on domestic coal supplies. Imported coal is not a viable or cost-effective alternative.

(c) The Petitioner has entered into revised Fuel Supply Agreements (FSA) with BCCL and CCL on 16.01.2013 and 16.12.2013, respectively. These FSAs are one-sided standard documents favouring the coal supply companies, with no penalty provisions for variations in coal quality.

(d) Although there is a provision for adjusting the coal price according to the grade of supply in the FSA, which must be and is being passed on to the beneficiaries in the cost-plus tariff for the generating station, there is no penalty for poor coal quality that is affecting Petitioner's performance. This is similar to adjustments made for grade slippage and quantity variation.

(e) The Petitioner, therefore, submits that any deterioration in the station heat rate due to poor coal quality is being borne by it despite the coal quality being beyond its control.

Re. It was the obligation of the Petitioner, while entering into Fuel Supply Agreement, to ensure the desired quality of coal, by enforcing the provisions of FSA or by exploring any other alternate sources of coal.

Re. The Petitioner has not furnished any documentary evidence substantiating the efforts taken by it to ensure the good quality of coal.

376. The Petitioner further submits that the Gross Calorific Value (GCV) of coal, a key quality parameter affecting efficiency, is beyond the control of the generator. This has been acknowledged by the Hon'ble Commission in the Explanatory Memorandum issued in December 2018 with the Draft Tariff Regulations 2019. Relevant extracts are provided below:

> *"22.5 In the entire value chain from mine end to generating station end, the loss of GCV can take place on account of grade slippage at mine end, during transportation (transit with railway) and during storage (at generating stations).* ***The generating companies generally have no control over the grade/GCV of coal received at their generating stations.*** *There are several cases of grade slippages between the mine mouth and at the site of generating stations. Further, there is loss in GCV during transport of coal through Railway.* ***Therefore, the generator may receive lower energy than what was billed by the coal companies. These are beyond the control of the generating companies.***
>
> *22.6 Since the cost of slippage in grade of coal between the loading point*

and the site of generating station is ultimately passed on to the beneficiaries, this issue needs to be looked at in terms of risk allocation between the coal company, railways and the generating stations."

[*Emphasis supplied*]

377. The Petitioner respectfully submits that due to the low GCV of coal, several letters were issued to CCL, the coal supplier, on 01.06.2017, 25.05.2017, and 10.04.2017. These letters were annexed as sample communications in Petition No. 408/GT/2020.

378. It is pertinent to highlight the letter dated 06.09.2019 issued by GM (QC), BCCL, which clearly shows the dominant position of coal supplier companies that they are not willing to listen to quality complaints of the Petitioner and have summarily dismissed its request. The relevant extract of the letter dated 06.09.2019 has been reproduced below:

> *"...If you carry out any sampling and analysis of coal samples in any lab and submit the same to BCCL, it is immaterial/useless for BCCL and such results will not be entertained by BCCL. Your all letters along with analysis reports are being returned to you.*
> ***Hope, you will not send such irrelevant letter to this office or any office of BCCL in future."***
>
> **[Emphasis supplied]**

379. The Petitioner asserts that it has taken adequate steps to procure good quality coal. However, due to factors beyond its reasonable control, as previously mentioned, the quality of coal cannot be substantially improved. A true copy of the Letters dated 01.06.2017, 25.05.2017, 10.04.2017 and 26.09.2019 are annexed hereto and marked as **ANNEXURE P/39-A (COLLY.)**.

380. In addition to the above, theoretically, it can be argued that the Petitioner could achieve the normative SHR of 2326.03 kCal/kWh approved in Order dated 08.01.2022 in line with Regulation 49(C)(b)(i) specified in the Tariff Regulations 2019 with a Design THR of 1945 kCal/kWh, Design boiler efficiency of 87.8% and

a 5% operating margin if Design Coal is used. However, practically achieving Design values is only possible if other Design Conditions (e.g., ambient temperature, no degradation due to ageing, etc.) are also maintained. Even with Design Coal, actual boiler efficiency may be lower than the design efficiency under practical conditions on performance test of boiler. Actual boiler efficiency will further deteriorate if actual coal quality is poorer than design quality. The same can be substantiated from the report on performance test of boiler, (Report No. CPRI/ERED/EA/225/24) conducted by Central Power Research Institute (CPRI) for the Petitioner. The findings of CPRI are reproduced below for the Hon'ble Commission's reference:

> *"From the performance testing results it can be observed that the* ***boiler of Unit-1 and Unit-2 are operating at an efficiency of 84.98% and 84.89% against the design value of 87.80% at a maximum plant operating load of 528 and 574.74 MW.***
>
> *The dry flue gas loss is predominant in both boilers followed by the wet flue gas which is uncontrollable. The excess air ratio in both the boilers are maintained well within the limit. The measured CO varies from 8 to 9 ppm in Unit-1 and the same for Unit-2 varies from 7 to 8.75 ppm. These trace amount of CO indicates that the combustion is complete and hence there is no loss on account of CO.*
>
> *From the coal analysis it can be observed that the boilers are designed to handle coal with GCV of 4671 and ash content of 36.19%. During the performance testing the GCV of coal used in boiler-1 was 3978.6 and for boiler -2 was 3724.3 kcal/kg. Ash content of the coal used in boiler-1 was 41.97% and for boiler -2 was 46.02%. Hence, to operate the plant with highest possible load, more coal has to be burnt in boiler as the used coal GCV is far below the design GCV. The ash content in coal is very high compared to the design.* ***Thus with high firing rate of coal, more ash is being generated in the boiler. This will result in more boiler related auxiliary power consumption in terms of handling more fuel, flue gas and ash handling. The internal heat exchanging infrastructure of the boilers are exposed to such a high ash flow than it is designed for leads to high erosion rate and reduction in its life time.***
>
> *From the past three years trend (refer Figure – 1 and 2) it can be seen that the plant has never received coal of design GCV and operated most of the time*

with coal of CV less than 4000 kcal/kg.
The performance test results of boilers indicate that ***both the boilers are performing with a maximum achievable efficiency point even with firing of coal with low GCV and higher ash content."***

[*Emphasis supplied*]

A true copy of the Report dated 09.10.2024 on performance test of boiler (Report No. CPRI/ERED/EA/225/24) conducted by Central Power Research Institute (CPRI) is annexed herewith and marked as **ANNEXURE P/39-B**.

381. The CPRI Report validates Petitioner's assertions that deterioration in SHR of Petitioner's Plant is due to poor coal quality on which it has no control. Also, the FSA coal quality and, hence, boiler efficiency has not improved since commissioning. In fact, boiler efficiency has gone down from 85.5% at PG Test to 84.98% and 84.89% for Unit-1 and Unit-2 respectively. Therefore, in order to achieve actual SHR close to approved SHR, it would ideally be appropriate for the Petitioner to source higher GCV coal and blend it with FSA coal to operate close to the Design GCV of 4671 kCal/kWh. In fact, the Hon'ble Commission has also directed the Petitioner to make efforts to maintain GCV of coal received close to Design GCV. This will reduce the annual under-recovery of the Petitioner due to lower GCV of FSA coal to almost zero.

382. In this regard, it is relevant to note that the Petitioner sought the consent of the beneficiaries for procurement of imported coal in compliance to the aforesaid directions by the Hon'ble Commission *vide* letters dated 17.03.2023. A copy of the Letters dated 17.03.2023 issued by the Petitioner to beneficiaries respectively for seeking consent of the beneficiaries is annexed herewith and marked as **ANNEXURE P/39-C (COLLY.)**

383. However, the Petitioner was unable to secure the consent of the beneficiaries for such procurement, as the blending of coal would result in a substantial increase in

the variable cost which was estimated to be in the range of 90-100% of the prevailing variable cost while the savings in the from a lower GSHR would only amount to about Rs. 35-40 Crore annually. A copy of the Replies received from beneficiaries denying the consent for procurement of the imported coal are annexed hereto and marked as **ANNEXURE P/39-D (COLLY.)**

Re: Relaxation in SHR based on coal quality will render the norms in Regulations redundant as more often than not coal quality may not match the design quality.

384. It may kindly be noted that the Hon'ble Commission consistently uses the average SHR achieved in past years for NTPC's coal-based thermal generating stations, categorized by capacity (200/210/250 MW, 500 MW, and 660 MW units) and age (commissioned before 01.04.2009, between 01.04.2009 to 31.03.2014 and after 01.04.2014). These norms are applied to all coal-based generating stations, including Independent Power Producers (IPPs) like the Petitioner.

385. Further, the norms as per the Tariff Regulations 2019, if applied without relaxation, cause financial losses in the case of the Petitioner for none of its fault, warranting exercise of power to relax.

386. The Hon'ble Commission has been fixing SHR norms for new stations commissioned after 01.04.2009 on the basis of Design Heat Rate with some Operating Margin as per following formula:

SHR = Design Heat Rate x (1 + Operating Margin)

where, Design Heat Rate =Design Turbine Hear Rate/Design Boiler Ƞ

387. The Operational Margin was set at 6.5%, 4.5% and 5% in the Tariff Regulations of 2009, 2014 and 2019, respectively, based on the actual SHR and Operating Margin over the Design SHR of NTPC stations for the preceding 5 years, subject to ceiling

norms for Turbine Heat Rate (THR), Boiler Efficiency and SHR. For older stations commissioned before 01.04.2009, the SHR norm is based on the actual SHR achieved by NTPC stations over the preceding 5 years and is a single value for all stations within a category (e.g., 200/210 MW, 500 MW, 660 MW). For these older stations, design parameters are not considered and only the actual SHR from past years with the actual coal quality is validated against the fixed SHR norm. Additionally, relaxed SHR norms have been specified in the Regulations for certain older stations.

388. The CPRI Report further found out the current boiler efficiencies of 84.98% for Unit 1 and 84.89% for Unit 2 against the PG Test Boiler efficiency of 85.5% with actual coal due to poor coal quality against design value of 87.80% with design coal. Relevant extract of the Report is as follows -

> *"The performance assessment of boilers was conducted in August 2024. The work at the site consisted of measurement of input and output variables of different equipment and auxiliary loads in the plant.*
> ***The boiler efficiency of unit 1 and 2 were found to be 84.98% and 84.89%, respectively at test conditions, against the design value of 87.80%.***
> *The performance test results of boilers indicate that both the boilers are performing with a maximum achievable efficiency point even with firing of coal with low GCV and higher ash content."*
>
> [***Emphasis supplied***]

389. The Hon'ble Commission specified minimum values for Turbine Heat Rate, Boiler Efficiency and Design Heat Rate for different steam parameters. While Turbine Heat Rate and Design Heat Rate varied for different steam parameters, the minimum boiler efficiency was set at 85% in the Tariff Regulations 2009. This minimum was raised to 86% in the Tariff Regulation 2014 **for new generation stations achieving COD on or after 01.04.2014**, based on recommendations from the CEA. Since Petitioner's Plant was commissioned in tariff period 2009-14 of Tariff Regulations 2009, the minimum efficiency norm of 85% shall be

applicable to it and, hence, PG Test boiler efficiency of 85.5% may be considered as design boilers efficiency for the purposes of approving SHR of Petitioner's Plant for the period 2019-24.

390. The foundation for setting the minimum boiler efficiency norm at 86% is discussed in detail in Paragraphs 37.56 and 37.57 of the Statement of Reasons for the 2014 Tariff Regulations mentioned as under:

> *"37.56 The Commission, in the draft Regulations, had proposed to limit the boiler efficiency to 87%. The Commission is of the view that the CEA's computation of 3% margin on design heat rate is based on the lower boiler efficiency, which for recently installed units is in the range of 84%-85%. However, the Commission had proposed a margin of 4.50% at higher boiler efficiency of 87%.* ***The Commission considering the recommendations of CEA and other suggestions received from the stakeholders, has revised the boiler efficiency to 86% from 87% proposed in the draft Regulations for new generating stations achieving COD on or after 01.04.2014 while retaining the margin of 4.50% for heat rate.***
>
> *37.57 Further, for generating stations that have achieved COD between 1.4.2009 to 31.03.2014, the margin has been revised to 4.50%. The Commission would like to point out the observation made by CEA on the alarming trend of decreasing boiler efficiency, which has dropped down to level below 85% for recently commissioned Units of the same station operating on similar coal. The Commission is of the view that practices, which lead to unnecessary burdening of consumers should be discouraged. The Commission has, therefore, reduced their margin over and above design heat rate to 4.50%. Further, in order to limit the heat rate so derived, the Commission is of the view that the same should not exceed the heat rate norms approved during FY 2009-10 to FY 2013-14."*
>
> ***[Emphasis supplied]***

391. In the Tariff Regulations 2019, the lower limit of 86% boiler efficiency was retained. However, the operational margin was increased from 4.5% to 5%, based on the actual deviation from the Design Heat Rate adjusted for the lower limit of boiler efficiency for 500 MW units of NTPC. Relevant extracts of Explanatory Memorandum for Tariff Regulations 2019 are reproduced below:

> *"17.6.16 The following table summarises the computation of actual Operating Margin for 500 MW Series thermal generating stations commissioned after 01.04.2009.*

Table 55: Operating Margin for 500 MW Series Generating Stations

Generating Stations	Boiler Efficiency considered	Turbine HR	Design Heat Rate	Average of Corrected SHR	Actual Operating Margin
	(%)	(kcal/ kwh)	(kcal/ kwh)	(2016-17 and 2017-18)	(%)
500 MW Series					
Kahalgaon-II	**86.00**	1,944	2,260	2,393	5.54%
Korba-III	**86.00**	1,945	2,262	2,368	4.49%
Mauda-I	**86.00**	1,932	2,297	2,401	6.43%
Rihand-III	**86.00**	1,932	2,299	2,365	5.01%
Simhadri-II	**86.00**	1,933	2,287	2,381	5.61%
Sipat-II	**86.00**	1,948	2,269	2,342	3.27%
Vindhyachal-IV	**86.00**	1.932	2,300	2,405	6.58%
Average					**5.28%**

17.6.17 The Commission observe that in case of Kahalgaon II Power Station which comprises of three units of 500 MW, the design turbine cycle heat rate is 1944 kCal/kWh for Stage II. ***Further, the boiler efficiency for stage II is taken as 86.00%.*** *The Design heat rate, works out to around 2260kCal/kWh for stage II. By considering the current norm of 4.5% margin above the design heat rate, this results in a heat rate of 2361 kCal/kWh for Stage II. However, the actual five-year average heat rate for the station works out to be 2393 kCal/kWh. Similar is the case with other units.* ***The Commission, therefore, proposes to slightly normalise the norms to reflect the current operational efficiencies of the stations by increasing the margin to 5.00% from the current level of 4.50%.***"

[Emphasis supplied]

392. The Hon'ble Commission, by setting the boiler efficiency limit at 86%, has realistically corrected the over-estimated efficiency reduction at Design stage. This is evident from above quoted Table 55 of the Explanatory Memorandum for the Tariff Regulation 2019 which shows that after applying the efficiency correction for 500 MW Units commissioned after 01.09.2009, the average deviation for all plants is about 5%.

393. The Petitioner submits that for most of the other plants, where Design Boiler efficiency is less than 86%, the SHR norm is set using actual coal quality data and

a design efficiency of 86%, which is lower than the Petitioner's design efficiency of 87.8%. It is submitted that Petitioner had set higher design efficiency based on Design coal as per coal quality in the FSAs, which was not and will never be actually delivered. Hence, the Petitioner would never be able to achieve the strict SHR norm derived from its Design efficiency for none of its fault. Without relaxation in SHR to at least the 86% boiler efficiency level allowed for other plants, the Petitioner faces undue hardship and is expected to meet an unachievable SHR with the existing coal for the tariff period 2019-24.

394. When comparing the current approved SHR for thermal generating stations with similar 500 MW sets, the Petitioner appears to be an outlier. All similar capacity machines with the same turbine cycle heat rate (1945 kCal/kWh) have a design boiler efficiency of ≤ 86%. A copy of the table showing such difference/comparison of approved SHR between various thermal generating stations is annexed herewith and marked as **ANNEXURE P/39-E.**

395. The Petitioner demonstrated a boiler efficiency of 85.5% against design value of 87.8% in the PG test. However, due to consideration of lower boiler efficiency limit of 86% for other plants and design boiler efficiency of 87.8% for the Petitioner in the 2019-24 tariff period, the Petitioner incurs an additional 1.8% loss. Other stations with similar machines do not face this impact which amounts to discrimination.

396. The Petitioner respectfully submits that the Hon'ble Commission has allowed relaxations in operational parameters for many stations on valid and genuine grounds, such as DVC stations and gas-based stations of NEEPCO. Notably, the Hon'ble Commission previously relaxed norms for the Petitioner due to sub-optimal coal quality for the periods 2009-14 and 2014-19. However, the same

dispensation was not considered for the period 2019-24.

397. In view of the foregoing submissions, it is humbly prayed before the Hon'ble Commission to kindly relax the SHR norm for the Petitioner for the period 2019-24 to **2375** kCal/kWh for 2019-24 by considering boiler efficiency as 86% similar to other generators and providing level playing field, as the actual SHR is higher for the above reasons beyond the control of the Petitioner under Power To Relax as per Regulation 76 of Tariff Regulations 2019.

Re. Secondary Fuel Oil Consumption

398. Regulation 49(D) of the Tariff Regulations 2019 stipulates the Normative Specific Secondary Fuel Oil Consumption for Coal-fired Thermal Generating Stations as,

> *"Norms of operation for thermal generating station*
> *49. The norms of operation as given hereunder shall apply to thermal generating stations:*
> ...
> *(D) Secondary fuel oil consumption:*
> *(a) For Coal-based generating stations other than at (c) below: 0.50 ml/kWh"*

399. Accordingly, the Petitioner has considered Normative Specific Secondary Fuel Oil Consumption of 0.50 ml/kWh for the purpose of Tariff computation for the 2019-24 tariff period.

Re. Summary of Operational Parameters

400. The summary of the Operational Performance of the generating station for the 2019-24 tariff period considered for the tariff purpose is as follows:

Table 23: Summary of Operational Parameters for Tariff Period 2019-24

Particulars	UoM	2019-20	2020-21	2021-22	2022-23	2023-24
No. of Days of the Year		366.00	365.00	365.00	365.00	366.00
Unit Capacity	MW	1,050.00	1,050.00	1,050.00	1,050.00	1,050.00
NAPAF	%	85.00	85.00	85.00	85.00	85.00

MAITHON POWER LIMITED

Particulars	UoM	2019-20	2020-21	2021-22	2022-23	2023-24
SHR	kCal/kWh	2,375	2,375	2,375	2,375	2,375
Auxiliary Power Consumption	%	6.25	6.25	6.25	6.25	6.25
Secondary Fuel Oil Consumption	ml/kWh	0.50	0.50	0.50	0.50	0.50
Gross Generation at NAPAF	MU	7,834.82	7,813.41	7,813.41	7,813.41	7,834.82
Ex-Bus Generation (NAPAF)	MU	7,349.74	7,329.66	7,329.66	7,329.66	7,349.74

Re. Fuel Parameters for 2019-24 tariff period

401. This Section explains the components of Fuel Parameters considered for arriving at the Base Values of GCV of Coal, Base Price of Coal and Secondary Fuel as per the Tariff Regulations 2019. Regulation 34 of the Tariff Regulations 2019 reproduced below specifies the guidelines for arriving at the initial Landed Prices (of Coal & Secondary Fuel) and initial Projection of Gross Calorific Value ("**GCV**") of Coal:

> *"(2) The cost of fuel in cases covered under sub-clauses (a) and (b) of clause (1) of this Regulation shall be based on the landed fuel cost (taking into account normative transit and handling losses in terms of Regulation 39 of these regulations) by the generating station and gross calorific value of the fuel as per actual weighted average for the third quarter of preceding financial year in case of each financial year for which Tariff is to be determined:*
>
> *Provided that in case of new generating station, the cost of fuel for the first financial year shall be considered based on landed fuel cost (taking into account normative transit and handling losses in terms of Regulation 39 of these regulations) and gross calorific value of the fuel as per actual weighted average for three months, as used for infirm power, preceding date of commercial operation for which Tariff is to be determined."*

402. Accordingly, the Base Landed Price of Coal has been computed based on the

Weighted Average Landed Price of Coal for the third quarter i.e. October to December of each preceding year during 2019-24. Similarly, the Base Landed Price of HFO has been computed based on the Weighted Average Landed Price of HFO for the third quarter i.e. October to December of each preceding year during 2019-24.

403. In view of the above, the Base Landed Price of Coal, Base Landed Price of HFO and Base GCV of Coal are presented in the following Table.

Table 24: Summary of Fuel Parameters for Tariff Period 2019-24

Particulars	UoM	2019-20	2020-21	2021-22	2022-23	2023-24
Weighted Average Price of Coal	Rs./MT	4458.82	4045.19	3663.52	4306.90	4450.50
Weighted Average "As Received" GCV of Coal less 85 kCal/kg	kCal/kg	3986.82	3869.52	3731.84	4019.12	4102.57
Weighted Average Price of Secondary Fuel OIL	Rs./kL	47270.59	45666.78	37495.03	46038.57	65365.98
Weighted Average GCV of Secondary Fuel OIL	kCal/L	9100.00	9100.00	9100.00	9100.00	9100.00

404. The Petitioner humbly requests the Hon'ble Commission to allow the above-mentioned Fuel Parameters for the purpose of computation of tariff for the 2019-24 tariff period.

Re. O&M EXPENSES

405. Regulation 35 of the Tariff Regulations 2019 stipulates the Normative O&M Expenses as follows:

> *"**35. Operation and Maintenance Expenses:***
> *"(1) **Thermal Generating Station:** Normative Operation and Maintenance expenses of thermal generating stations shall be as follows:*
> *(1) Coal based and lignite fired (including those based on Circulating*

Fluidized Bed Combustion (CFBC) technology) generating stations, other than the generating stations or units referred to in clauses (2), (4) and (5) of this Regulation:

Year	*200/210/250 MW Series*	*300/330/350 MW Series*	*500 MW Series*	*600 MW Series*	*800 MW Series and above*
FY 2019-20	*32.96*	*27.74*	*22.51*	*20.26*	*18.23*
FY 2020-21	*34.12*	*28.71*	*23.30*	*20.97*	*18.87*
FY 2021-22	*35.31*	*29.72*	*24.12*	*21.71*	*19.54*
FY 2022-23	*36.56*	*30.76*	*24.97*	*22.47*	*20.22*
FY 2023-24	*37.84*	*31.84*	*25.84*	*23.26*	*20.93*

Provided that where the date of commercial operation of any additional unit(s) of a generating station after first four units occurs on or after 1.4.2019, the O&M expenses of such additional unit(s) shall be admissible at 90% of the operation and maintenance expenses as specified above;"

" 35

...

(6) The Water Charges, Security Expenses and Capital Spares for thermal generating stations shall be allowed separately after prudence check:

Provided that water charges shall be allowed based on water consumption depending upon type of plant and type of cooling water system, subject to prudence check. The details regarding the same shall be furnished along with the Petition;

Provided further that the generating station shall submit the assessment of the security requirement and estimated expenses;

Provided also that the generating station shall submit the details of year-wise actual capital spares consumed at the time of truing up with appropriate justification for incurring the same and substantiating that the same is not funded through compensatory allowance as per Regulation 17 of Central Electricity Regulatory Commission (Terms and Conditions of Tariff) Regulations, 2014 or Special Allowance or claimed as a part of additional capitalization or consumption of stores and spares and renovation and modernization.

Re. Raw Water Charges, Security Expenses

406. The Regulation 35(6) of the Tariff Regulations 2019 stipulates that the Water Charges shall be allowed separately after prudence check based on water

consumption depending upon type of plant and type of cooling water system.

407. It is reiterated that the Generating Station is a Coal-based Thermal Power Plant with Induced Draft Cooling Towers utilizing Circulating Water system for the cooling of the condenser and the ancillary equipment. Further, Raw Water is also utilized for various purposes the majority of which are listed below:

(a) Preparation of the De-mineralized Water utilized for the generation of Steam in the Boiler.

(b) De-ashing of Bottom Ash

(c) Plant usage and cleaning as Service Water

(d) Fire Hydrant System

408. With regard to Water charges, the Petitioner re-iterates that DVC *vide* its Office Memorandum dated 23.07.2019 revised the water Tariff for Industrial consumers (drawing water from reservoir/river) including Petitioner from Rs 5.7/KL to Rs. 10.64/KL with an annual escalation of 10% effective from 01.04.2019.

409. Further, the Petitioner requested DVC to reconsider this steep rise in water Tariff by letter dated 20.08.2019. However, DVC *vide* its Letter dated 03.09.2019 replied that it has revised the water Tariff for Industrial & Domestic water supply of raw water with effect from 01.04.2019 in exercise of its power under section 15 of DVC act, 1948 and the Petitioner is obligated to pay the same as per DVC's Schedule of Rates in accordance with agreement. A copy of correspondences exchanged with DVC regarding raw water charges are annexed herewith and marked as **ANNEXURE-P/40 A**.

410. Considering revised Tariff including annual escalation, the Average Annual Water Charges approved during the Tariff Period 2019-24 and claimed now are presented in the following Tables:

Table 25: Raw Water Charges Approved for Tariff Period 2019-24(Rs. lakh)

2019-20	2020-21	2021-22	2022-23	2023-24
1930.35	2117.58	2329.34	2562.28	2826.22

Table 26: Raw Water Charges claimed for the Tariff Period 2019-24(Rs. lakh)

Particulars	UoM	2019-20	2020-21	2021-22	2022-23	2023-24
Total raw water Expenses	Rs lakh	1600.66	1773.85	2149.43	2236.33	2537.69

A copy of the Auditor Certificate for O&M Expenses covering water charges, security expenses and Ash Disposal Expenses is annexed herewith and marked as **ANNEXURE P/40 B**.

411. In view thereof, the Petitioner humbly requests the Hon'ble Commission to allow the actual Raw Water Charges for the 2019-24 tariff period.

Re. Security Expenses

412. Regulation 35(6) of the Tariff Regulations 2019 stipulates that the Security expenses shall be allowed separately, and the generating station shall submit the assessment of the security requirement.

413. The following table shows actual Security Expenses for the generating station incurred for the period FY 2019-20 to FY 2023-24.

Table 27: Actual Security Expenses for the period 2019-24

Particulars	Unit	2019-20	2020-21	2021-22	2022-23	2023-24
Security Expenses	**Rs. lakh**	**723.82**	**834.98**	**918.57**	**1,056.85**	**1,039.65**

A copy of the auditor certificate for actual security expenses is already annexed herewith and marked as Annexure P/40 B.

414. The Petitioner humbly requests the Hon'ble Commission to allow the actual

security expenses for the 2019-24 Tariff Period.

Re. Ash Disposal Expenses

415. The Hon'ble Commission, after considering the submissions of the Petitioner, acknowledged the cost towards 100% Ash utilization as a statutory requirement as per MoEF&CC Notification dated 03.11.2009 in its Order dated 08.01.2022 and allowed an expense of Rs. 17099.51 lakh on account of Ash disposal for period 2019-24 as claimed by the Petitioner subject to true-up at the end of the tariff period with prudence check. Relevant extracts from the Order dated 08.01.2022 in Petition No. 408/GT/2020 are reproduced below:

> *"The Petitioner has submitted that on account of dropping of Ash conveying pipeline, due to uncertainty in the allocation of the abandoned mines for ash disposal by ECL management, the ash disposal expenses may be allowed. It is observed that the coal received at Maithon site is of sub-optimal quality as compared to the design coal and ash content is to the tune of 43% to 46% (approx.). However, due to limited capacity of the Ash ponds, the Petitioner has considered the option of disposing unutilized ash through bulkers to sites for back filling of mines and to other approved locations for land filling, thereby incurring the cost towards excavation and transportation of pond ash. The projected ash disposal expenses claimed by the Petitioner are as follows*
>
> ....
>
> *294. The matter has been considered. We observe that the Ash disposal expenses claimed by the Petitioner and allowed to this generating station since COD, is in view of limited capacity of the Ash ponds and the mandatory ash disposal in terms of the notification of MOEF&CC mandating 100% ash utilization. Considering the limited capacity of ash ponds and the fact that the Petitioner is under an obligation of meeting 100% ash utilization as per MOEF & CC notification, we, in line with our dated 25.4.2019 in Review Petition No.16/RP/2018 (in Petition No.152/GT/2015) (as quoted in paragraph 289 above), allow the expenses claimed towards Ash disposal, on projection basis, for the 2019-24 tariff period as under:*

(Rs. In lakh)

2019-20	2020-21	2021-22	2022-23	2023-24
3425.52	3416.16	3416.16	3416.16	3425.52

> *295. This is however subject to prudence check at the time of truing-up of*

tariff of the generating station. The Petitioner is directed to award Ash disposal contracts based on the transparent bidding process and shall submit the details of bidding while claiming the actual ash disposal expenses during truing up of tariff for the 2019-24 tariff period. Considering the fact that the reimbursement of ash disposal expenses is allowed based on the special circumstances (limited ash pond storage) for this generating station, these expenses are not made part of the O&M expenses allowed and the consequent annual fixed charges determined in this order"

416. Therefore, for the purpose of truing–up, the Petitioner has considered the following actual ash disposal expenses incurred in the respective financial years during the period 2019-24. It may be seen that with its continuous efforts, the Petitioner has been able to keep Ash Disposal Expenses within the total allowed expenditure in the first four years, the year-on-year variation being primarily due to variations in actual ash quantity disposed.

Table 28: Approved and Actual Ash Disposal Expenses for the period 2019-24

Particulars	Unit	2019-20	2020-21	2021-22	2022-23	2023-24	Total
Allowed by Commission	Rs. lakh	3425.52	3416.16	3416.16	3416.16	3425.52	17099.51
Actual Expense Incurred	Rs. lakh	2,883.40	3,719.98	3,023.57	3,337.21	5,832.29	18,796.45

417. The cost variation in 2023-24 between the approved amount by the Hon'ble Commission and the actual expenditure is attributable to the reasons which were not envisaged by the Petitioner at the time of determination of tariff and are described as under alongwith details of transparent bidding process:

(a) Higher Quantum of Ash for disposal

The Petitioner would humbly like to submit that during the final year the Quantum of Ash Disposal increased by nearly 24% from the previous year as can be observed from the details provided below:

Year	Opening Balance (Pond) (MT)	Ash Generated (MT)	Total (MT)	Ash Disposal (MT)	Closing Balance (Pond) (MT)	Cost of Ash Disposal (Rs. Crore)	% Change in Annual Ash Disposal	% Change in Annual Cost of Disposal
2019-20	647,528	1,578,197	2,225,725	1,596,653	629,072	28.83		
2020-21	629,072	1,648,398	2,277,470	2,187,916	89,554	37.20	37%	29%
2021-22	89,554	1,851,600	1,941,154	1,657,702	283,452	30.24	-24%	-19%
2022-23	283,452	1,808,698	2,092,150	1,748,295	343,855	33.37	5%	10%
2023-24	343,855	2,067,783	2,411,638	2,173,513	238,125	58.32	24%	75%

As evident from the above data the quantum of Ash disposal in FY 2023-24 is much higher than the previous years as the Petitioner had to not only dispose of the amount of Ash Generated during the year but also some part of the Ash already available in the Pond for achieving 100% Ash utilization which is a statutory requirement as per MoEF&CC Notification dated 3.11.2009 and as duly recognized by Hon'ble Commission in its Order dated 8.1.2022. It is noteworthy to mention that the Petitioner, in addition to 100% disposal in each year, has also managed to bring the quantum of Pond Ash down from 647528 MT in the beginning of FY 2019-20 to 238125 MT by the end of FY 2023-24 i.e. by 409403 MT through additional ash disposal.

(b) Higher distance for disposal of Ash beyond the control of the Petitioner

The Petitioner would like to bring to the kind attention of the Hon'ble Commission that as the Mines allotted to the Petitioner for Mine Void filling by Eastern Coalfields Limited ('ECL') were no longer available for backfilling, the Petitioner vide letter Ref. No. MPL/ECL/FY 22-23/131022 dated 13.10.2022 requested ECL for allocation of abandoned mine voids for back filling near the Maithon Thermal Power Station. Subsequent to the request, the Eastern Coalfields Limited vide letter ref. no. ECL/GM/MA/2022/13/140 dated 15.10.2022 notified the Petitioner

MAITHON POWER LIMITED

that the Gopinathpur Colliery, which was only about 20 km away, earlier allotted for backfilling of mine void is not to be used for future fly ash dumping. The Petitioner being a prudent utility requested ECL for allotment of abandoned mines near MPL Plant vide letter ref no. MPL/FY23/22-11/010 dated 22.11.2022, 01.02.2023 and with CEA on 09.08.2024 but no new mines were allotted upto 9.07.2024. More so, the newly allotted mine is at a significantly longer distance of about 65-70 km from MPL Plant resulting into higher disposal expenses. It is pertinent to mention that the allotment of abandoned mines is beyond the control of the Petitioner and the Petitioner can only request for mines at a closer distance. This resulted in ash disposal at longer distances at significantly higher cost for ash disposal compared to the amount projected by the Petitioner at the time of determination of Tariff. Copies of all the communications regarding the issue of disposal of ash are annexed hereto and marked as **ANNEXURE-P/41A (COLLY.)**.

(c) Higher per MT Rate for Ash Disposal

It is pertinent to mention that the Petitioner followed a transparent bidding process for the discovery of rates for sale of fly ash and evacuation, transportation and stowing of pond/hydrobin ash from Maithon Power Limited for the period FY 2019-20 to FY 2023-24 and shall do so for ensuing years as well. Sample copy of Advertisements published in newspapers seeking for the interested bidders regarding are attached at **ANNEXURE-P/41B (COLLY.)**. The price discovered through the transparent bidding process was adopted for the purpose of billing for Ash Disposal. However, as a consequence of increase in rate as well as disposal distance as elaborated above, the overall expenses increased in FY 2023-24.

(d) Freight Subsidy to cement companies for offtake of Dry Fly Ash.

It is submitted that offtake of dry fly ash by cement companies through bulker was

at zero cost for the period from July-21 to November-22. However, with increase in availability of dry fly ash from nearby Plants, lifting commitments were not fulfilled by the cement factories. Further, MPL published advertisement on 09.07.2022 for sale of fly ash through rail and road mode, however, it did not receive any buyer of fly ash. Therefore, in order to reduce the higher cost of disposal to far of mines, the Petitioner approached various cement plants in west Bengal, Jharkhand and north eastern States of India for use of their generated ash using rail and road mode. The cement companies agreed to lift dry fly ash from MPL with freight subsidy only. Considering the prevailing circumstances, the cost advantage of disposal at mines vis-a-vis freight subsidy asked by parties, the Petitioner offered freight subsidy to some extant which continued the increase in the cost in FY 2023-24. It is worth mentioning that without such freight subsidy, the ash disposal expense would have been much higher.

Re. Capital Spares

418. It is submitted that as stipulated in Regulation 35(6) of the Tariff Regulations 2019, the actual Capital Spares consumed during a year can be claimed separately provided the same is not funded through compensatory allowance or Special Allowance or claimed as a part of additional capitalisation or consumption of stores and spares and renovation and modernization. The Petitioner humbly submits that the Petitioner required several Capital Spares for the critical equipment during the above Tariff Period in Order to ensure the reliability and the availability of the main equipment.

419. Further, these Capital Spares have been claimed excluding the residual value i.e., 10% of the total value of the Capital Spares in terms of the findings by the Hon'ble Commission in the Tariff Order dated 08.01.2022. The relevant excerpts of the

Order are reproduced below for kind reference.

> *"143.....*
> *Further, we are of the view that spares do have a salvage value. Accordingly, in line with the practice of considering the salvage value, presumed to be recovered by the Petitioner on sale of other capital assets, on becoming unserviceable, the salvage value of 10% has been deducted from the cost of capital spares considered above, for the 2014-19 tariff period. Therefore, on prudence check of the information furnished by the Petitioner in Form-17 and on applying the said ceiling limit along with deduction of the salvage value @10%, the net capital spares allowed in terms of Regulation 29(2) of 2014 Tariff Regulations is as follows:..."*

420. Further, these Capital Spares have not been included in the Additional Capitalization nor funded through compensatory allowance or Special Allowance.

Table 29: Details of Capital Spares for the 2019-24 period (Rs. lakh)

S. No.	Capital Spares	2019-20	2020-21	2021-22	2022-23	2023-24	Total
i.	DM Plant equipment	45.56	45.91	22.08	2.40		115.95
ii.	Cooling Tower Internals			88.25	209.67	202.05	499.97
iii.	Coal Mill Journal Assembly			26.49	340.09		366.58
iv.	Economiser Coil		495.26	699.87			1195.13
v.	TDBFP Recirculation Valve	55.37	54.80	57.75	1.24	0.45	169.61

	Net Capital spares	**381.60**	**613.70**	**1262.40**	**2647.89**	**909.73**	**5815.31**

Re. Additional Capitalization as directed by Hon'ble Commission in Previous Order to claim under Capital Spare:

421. It is humbly submitted that the Hon'ble Commission, in the Order dated 08.01.2022, had granted liberty to the Petitioner to claim expenses on certain item under Capital Spares. Following are the relevant extracts of the Order dated 08.01.2022:

> *"192. However, for other items such as coal mill internals, cooling tower internals, economizer coil DM plant equipment, C.T fan gearbox etc. required to be replaced before the life of plant due to wear/ tear, we hold that the failure/replacement of items does not fall under force majeure. However, replacement of such consumables may be met from the capital spares and may be claimed under capital spare consumption during truing up. In view of this, the additional capital expenditure claimed by the Petitioner is not allowed. Further, the prayer of the Petitioner for granting liberty to seek capitalization against 'Refurbishment of HP bypass hydraulic servo system' at the time of truing-up shall be considered as per the merit and provisions of regulations at the time of truing-up of tariff."*

422. In view thereof, this Hon'ble Commission may be pleased to consider the following claims:

i. DM plant Equipment

423. The Petitioner submits that the De-mineralization (DM) water Plant uses strong acids and alkalis for demineralizing of water to be used in the Boiler for steam generation purpose. Acids and Alkalis have a lasting detrimental effect on metallic parts even if adequately protected and selected for the purpose of use. To prevent accelerated deterioration of these equipment periodic heavy refurbishment/ replacement is required at strategic areas of DM Plant.

424. Due to the use of strong acids and alkalis the Deterioration in rubber quality led to leakage from piping & vessels and ultimately resulted in reduction in DM plant capacity. Reduced DM water makeup in boiler in running conditions restricts boiler load, consequently, restricting Unit loading. Therefore, the refurbishment of DM Plant was undertaken with replacement of pipelines and acid tanks in a phased manner from FY 2019-20 to FY 2022-23. The refurbishment of DM Plant (i.e., replacement of Mild Steel Rubber Lined ("**MSRL**") Piping, Vessels etc.) has ensured reliable operation of DM Plant.

425. Therefore, the Petitioner prays to the Hon'ble Commission to admit the Capital Spare of Rs. 115.95 lakh incurred under Regulation 35(1)(6) of the Tariff Regulations 2019.

ii. Cooling Tower Internals

426. It is submitted that the Availability of Cooling Towers ("**CT**") are vital for any thermal power station. Each Unit of Petitioner's Plant is having 22 nos. of Cooling Tower Cells and in total 44 nos. CT Cells are there for two Units. Effectiveness of Cooling Towers are essential to reduce the temperature of Circulating Water for condensation of exhaust steam inside Condenser and maintenance of TG Vacuum. Notably, over a period of continuous use under a highly moist environment combined with the effect of ageing has resulted in deterioration of Cooling Towers Internals and more chances of premature failures of Cooling Tower Internals.

427. Therefore, for reliable operation of Cooling Tower, the healthiness of all components viz, PVC fills, drive shaft, drift eliminators, flow control butterfly valves and blades of axial flow fans of cooling towers is very much essential.

428. Hence, it was planned to replace the Cooling Tower Parts to avoid any breakdown. In view of the above facts and to increase the availability and reliability of Units

for smooth, uninterrupted power supply, expenditure has been incurred for the procurement and replacement of IDCT Internal Spares of Rs. 499.97 Lakh spread over FY 2021-22 to FY 2023-24 to replace the existing ones for the smooth running of the plant.

429. With regard to major portion of this expenditure on PVC fills, M/S MM Aqua technology limited, the OEM has communicated the useful life to be 8 years vide its email dated 06.05.2022, which has already been over. A copy of the Email dated 06.05.2022 issued by OEM is annexed herewith and marked as **ANNEXURE-P/42**.

430. Hence, the Hon'ble Commission is requested to allow the aforesaid claim under Regulation 35(1)(6) of the Tariff Regulations 2019.

iii. Coal Mill Journal Assembly

431. It is submitted that the Coal Mill Journal Assemblies are vital parts of Coal Milling system. Coal particles get crushed in between grinding rollers mounted on Journal Assemblies and Bull- Ring segments. Since Journal Assemblies are situated inside the Coal Mill, they have suffered heavy erosion and deterioration on account of abrasive property of coal aggravated due to high ash content. But to avoid breakdown of the coal mills, replacement of the coal mill Journal Assembly was required for assemblies which are beyond repairs and overhauling of the repairable ones.

432. As recommended by M/s BHEL in its Minutes of Meeting dated 13th and 14th June 2018, phase-wise replacement of the unrepairable ones/overhauling of the repairable one was planned in ensuing years. Following are the relevant extracts of the MoM dated 13th and 14th June 2018 [***Refer: Annexure P/22B***] held between the Petitioner and BHEL:

"*over a period of within 10 years, and plant approaching half-life period of*

design operation, plant will also be required to take up extensive replacement if internals of crushers, coal mill internals and gear box including replacement of burner assemblies in a phased manner of next 4 years time"

433. Pertinently, in the Petitioner's plant, 8 pulveriser/coal mills are installed in individual Units having 3 numbers of Journal Assemblies. Thus, total 48 Journal Assemblies are operational. Considering the level of deterioration of the Journal Assembly, the Petitioner for now has procured and replaced of 30 Journal Assemblies, i.e., for 10 Coal mills in phased manner from FY 2021-22 (Rs. 26.49 Lakh) and FY 2022-23 (Rs. 340.09 Lakh). The Petitioner, therefore, prays to the Hon'ble Commission to admit the Capital expenditure within the scope and purview of Regulation 35(1)(6) of the Tariff Regulations 2019.

iv. Economiser Coil

434. It is humbly submitted that as explained in previous paragraphs on Economiser Coil Refurbishment, since COD of the Units, large number of forced outages have been recorded due to boiler tube leakages in economizer and LTSH Coils. On further inspection, the Petitioner had noticed heavy erosion of the pressure parts resulting into significant degradation of the economiser coils.

435. In Order to find out the root cause of such failures and for seeking corrective measures, failure history of economiser banks and LTSH coils along with inspection findings were given to M/s BHEL. Considering above details and after due analysis, BHEL, in the meeting held on 13th and 14th June 2018 [***Refer: Annexure P/22B***], attributed coal characteristics to be the root cause of such erosion and further recommended for replacement of economiser and LTSH Coils. Following are the relevant extracts of the MoM held between the Petitioner and BHEL:

" MPL presented the failure history, inspection findings for the economiser

banks and LTSH Tubes. ***BHEL stated that major root cause resulting in erosion in LTSH and economiser banks are on account of coal characteristics and properties****. Since MPL is required to continually operate with coal properties having higher Ash content i.e., towards worst side of the designed coal, as per availability in the local region, additional care may be exercised to* ***ensure replacement of above economiser and LTSH sections, at least once in next 4 years****, followed by scheduled periodic maintenance to maintain the safety and reliability of boiler operation ...."*

[***Emphasis Supplied***]

436. Based on above observations and considering cost involved in undertaking replacement of all coils, the Petitioner proposes to inspect the coils thoroughly after bringing it to ground level as thorough inspection is not possible to be done in situ and after completion of all physical inspection, thickness measurement and corrective action, coils will be positioned back to boiler. Removal of Economizer coils from boiler to ground level, inspection and repairing is the effective and widely accepted methodology, accordingly, the Petitioner has built/proposed Economiser Platform in the previous paragraphs.

437. Since these activities are time consuming and keeping in view the 198 nos. of Economizer coils in one boiler, 100% coils inspection, repairing and re-insertion is not possible to be completed within the Outage Period. In view of 100% economiser coil servicing, Petitioner has proposed procurement of 1 Set of economizer coils . During overhaul, installed economiser coils will be removed and replaced with new economiser coils within the stipulated outage time.

438. Thereafter, the removed economiser coils will be repaired after careful inspection in next few months and will be kept ready for use in successive overhauls. This will be a one-time procurement for both the Units.

439. Accordingly, Hon'ble Commission is requested to approve Rs. 1195.13 Lakh incurred for Economiser Coils as capital spare during 2019-24 under Regulation 35(1)(6) of Tariff Regulations 2019.

Re. Capital Spares allowed to be claimed in previous Order

v. TDBFP Recirculation Valve

440. It is submitted that the Recirculation Valve ("**RCV**") is an integral part of the Boiler Feed Pump (BPP). This is an ON/OFF type Valve and it operates depending on the suction flow of the Boiler Feed Pump. Opening of RCV is very much critical during initial start-up for maintaining minimum flow requirement of BFP and during emergencies to avoid churning and damage of pump internals.

441. After few years, it was observed that the RCVs are passing feed water during shut-off condition (i.e. during normal operation). The rate of passing gradually increased and reached up to 300 TPH in a Unit. Initially, the passing could be controlled by repairing the Valve internals which could only sustain for 4-6 months. Repeated damage of Valve Seat, Plug & Stack caused frequent outage of BFP. Therefore, the Petitioner has replaced TDBFP RCVs gradually from FY 2019-20 to 2023-24.

442. Thus, the capital expenditure of Rs. 55.37, 54.80, 57.75, 1.24, 0.45 Lakh respectively in each year during 2019-24 for TDBFP Recirculation Valve may be approved by the Hon'ble Commission as capital spare under Regulation 35(1)(6) as per Tariff Regulations 2019.

vi. Coal Mill Gearbox

443. It is submitted that the Coal Mill Gearbox is an integral part of Milling System and has to absorb major part of vibration and high impact of unbalanced forces generated during coal grinding process owing to presence of non-grindable objects like stone and foreign particles. So, these gearboxes need periodic overhauling and replacement of its critical components as required during overhauling process.

444. Ideally, these gearboxes need overhauling after every 5-6 years of continuous operation at OEM workshop. Since 16 Coal Mills are in service at the Petitioner's Plant for last 7-8 Years, they need overhauling to continue further operation. At present, 3 Gearboxes are in critical condition and need immediate attention to avoid forced outage of Coal Mills. As recommended by BHEL in its MOM dated 13-14th June 2018, [***Refer: Annexure-P/22B***] phase wise replacement was planned in years. Following are the relevant extracts of the said MoM:

> *"over a period of within 10 years, and plant approaching half life period of design operation, plant will also be required to take up extensive replacement if internals of crushers, coal mill internals and gear box including replacement of burner assemblies in a phased manner of next 4 years time"*

445. In order to take up this activity one by one, gearboxes need to be replaced with Capital Spare and removed ones are required to be sent to OEM/Vendor workshop for overhauling. The entire cycle of removal-transport-repair takes almost 9-12 months. Pertinently, the Petitioner received one set of gear box under initial Spares for maintenance purpose. But in given situation, it was very difficult to plan and overhaul running 16 number of gearboxes with just one set of spare gear box assembly considering the cycle time of the process.

446. In view of the above constraint and to avoid complete failure of Gear boxes, procurement of one set of Gear Box Assembly including other Spares with actual cost of Rs. 399.48 lakh has been incurred during FY 2022-23 as capital spares for kind approval of the Hon'ble Commission under Regulations 35 (1)(6) of the Tariff Regulations 2019.

vii. 400 kV Circuit Breaker

447. It is submitted that the Petitioner has one and half breaker scheme in 400 kV switchyard. One and a Half Breaker scheme means for every 2 Equipment, there

are 3 Circuit Breakers. Any breaker can be removed for maintenance without affecting the service. Only one Pole of Spare Breaker was supplied by BHEL under initial spares for Projects which was consumed in FY 2016-17, hence, making the stock as nil.

448. In case of failure of one breaker, system load will be in service without any interruption. However, this situation poses reliability risk for the period breaker is out of service or has been sent for repair. After consumption of spare Pole in 2017, the Petitioner did not have any spare breaker in 400 kV switchyard. Failure of any one breaker would reduce the reliability of critical power evacuation system which will have impact on grid reliability.

449. In above scenario, the Petitioner was not able to take advantage of one and half scheme. For carrying out maintenance of that particular bay or for attending hot spot, complete shutdown of the bay is required. In order to enhance reliability of 400 kV switchyard, requirement was felt for procurement of one complete Spare Circuit Breaker and same was to be kept as critical spare for plant.

450. In light of the above, it is requested before the Hon'ble Commission to approve actual cost of Rs 61.65 lakh in FY 2021-22 for the procurement of one set of spare 400 kV Circuit breaker under Regulations 35(1)(6) of the Tariff Regulations 2019.

viii. Crusher Rotor Assembly

451. It is submitted that there is no Primary Crusher available in CHP. The Secondary Crusher, Ring Granulator, therefore, handles the ROM (Run of Mines) Coal with greater than 300 mm size Coal & Stones. Due to continuous operations under the presence of foreign materials and stones in coal has impacted adversely the life of the equipment. As also stated above, the quality of coal is beyond the control of Petitioner.

452. So far, the Petitioner is managing the breakdown with continuous repairs and replacement of damaged internals of the Assembly. However, with repeated repairs the life of the crusher rotor assembly had deteriorated drastically and may have essentially needed replacement anytime in near future. There was no spare crusher rotor assembly supplied during the Project Commissioning under initial Spares. Further, BHEL in its MOM dated 13-14th June 2018 [***Refer: Annexure-P/22B***], advised for procuring crusher spares in next 4 years. Following are the relevant extracts of the said MoM:

> *"over a period of within 10 years, and plant approaching half life period of design operation, plant will also be required to take up extensive replacement if internals of crushers, coal mill internals and gear box including replacement of burner assemblies in a phased manner of next 4 years time"*

453. Considering the above and to meet exigency, procurement of one set of spare crusher rotor assembly with cost of Rs. 149.68 lakh was done incurred in FY 2022-23 and FY 2023-24. The Hon'ble Commission under Regulations 35(1)(6) of the Tariff Regulations 2019 may kindly approve the same as capital spares.

ix. Turbine Bearing set

454. The turbine bearing set was classified as a capital spares in Order dated 08.01.2022, wherein the Hon'ble Commission directed it to be included during the true-up process. Consequently, procurement commenced and a budget was allocated in June 2023, with an order placed with the OEM, M/s BHEL, in October 2023.

455. It may be noted that during the Annual Overhaul of Unit-1 carried out by the Petitioner in October-November 2017, TG Bearing sets were found in non-usable condition and a new set of bearings was installed as per the recommendation of M/s BHEL, as M/s BHEL was engaged as the principal service provider for TG

Overhauling. Since only one set of bearings was procured as Initial Spares the current stock for Turbine Bearing is Nil.

456. Considering the application criticality of the installed spare and following the recommendation by M/s BHEL another set of bearings needs to be procured. The absence of ready-to-use spare bearings can lead to extended shutdown periods, resulting in significant generation losses and potential secondary damage to other critical components due to high vibration. The benefits of this expenditure are multifaceted as follows:

(a) Firstly, having a ready-to-use spare set of bearings will mitigate the risk of prolonged shutdowns and generation losses, which can amount to 12.6 MUs/day.

(b) Secondly, it ensures that any sudden breakdown due to bearing failure can be addressed promptly, thereby maintaining the reliability and availability of the power units.

(c) Thirdly, the procurement from the OEM guarantees the reliability and fitment cum interchangeability of the bearings, which is crucial given the critical application area.

457. Given the large size of the bearings for the 525 MW TG set, BHEL agreed to an eight-month delivery period due to the casting and machining processes involved. With ongoing follow-up, BHEL supplied one bearing in March 2024, with the remaining bearings scheduled for delivery in FY 2024-25. All the bearings shall be replaced in upcoming overhauls for which projections have been made in Tariff period 2024-29. A copy of the correspondences exchanged between BHEL and the Petitioner regarding Turbine Bearing set are annexed herewith and marked as **ANNEXURE P/43**.

458. Thus, the Petitioner has incurred Rs. 51.58 Lakh in FY 2023-24 and balance estimated project cost of Rs. 261.02 lakh shall be incurred in FY 2024-25.

459. In view thereof, it is humbly requested before the Hon'ble Commission to approve the above expenditure of Rs. 51.58 Lakh in 2023-24 under Regulations 35(1)(6) of the Tariff Regulations 2019.

Re. New Proposed Capital Spares

x. Pulveriser internals

460. It is submitted that the pulveriser internal components (liners, bull ring segments, grinding rolls, journal heads, ceramic cone and deflector) are also subjected to high erosion due to higher ash content of coal. Over the period of time, the components got heavily eroded leading to reduction in quality of pulverized coal and pulverizing capacity. Issue of high rate of erosion in coal mills was also taken up with M/s BHEL. After analysing the facts, M/s BHEL, in MoM dated 13th and 14th June 2018 [***Refer: Annexure P/22B***], under "Corrective Measures", stated coal characteristics to be the main cause and recommended for replacement of internals for pulveriser. Relevant portion of the MoM are extracted below:

> *".... Over a period within 10 years, and plant approaching half-life period of design operation, plant will also be required to take up extensive replacement of internals for* ***crushers, coal mill internals and gear box*** *including replacement of Burner assemblies in phased manner of next 4 years' time"*

461. In view of above, expenditure towards Pulveriser internals has been carried out with actual cost of Rs 99.64 lakh during 2019-24. The said expenditure falls within the scope of Regulation 35(1)(6) of the Tariff Regulations 2019 and may kindly be approved by the Hon'ble Commission.

xi. Suspended Magnet & Track Hopper

462. It is submitted that as part of the CHP, there are Inline Magnetic Separators (ILMS)

(1 number on each belt) installed at the discharge point of conveyor (BCN-3A/3B) which discharges coal to the crusher (Ring Granulators). In Order to control the frequent tripping of conveyor due to MDT sensing both types of metals and to eliminate the possibility of metal pieces entering the crusher, it was required to install a trolley mounted suspended electromagnet prior to the MDT.

463. Therefore, capital expenditure incurred is Rs. 69.70 lakh in FY 2019-20, for the procurement and installation of suspended magnet and it is prayed that the same may be allowed by the Hon'ble Commission under Regulation 35(1)(6) as per the Tariff Regulations 2019.

xii. Breaker & Relays (MV&LV Switchgear)

464. As explained in case of 400 kV circuit Breaker, one and half breaker scheme exposes to the risk of losses reliability and availability during the period when one of then breaks out for servicing /repair replacement. The Petitioner submits that spare Breakers & Relays for MV & LV switch gear also was, therefore, needed to be procured for running the plant without any generation loss or to minimize the duration of generation loss in case of any breakdown. Since these circuit breakers have a lead time of delivery, the same is needed to be procured and maintained as capital spares. While procurement of these spares, it was found that GE has stopped manufacturing these circuit breakers. Since these breakers have completed their service life (20,000 nos. of operations), therefore, replacement of these breaker is necessary for smooth operations of the plant. Pertinently, different make compatible circuit breaker was procured as spare for each type. [Refer: Annexure P/47 which is *annexed subsequently in the present Petition*]

465. Thus, capital expenditure of Rs. 26.72 lakh in FY 2019-20, Rs. 73.14 lakh in FY 2021-22, Rs. 99.34 lakh in FY 2022-23 and Rs. 40.29 lakh in FY 2023-24 for spare

MAITHON POWER LIMITED

Breakers & Relays for MV & LV Switch gear may be approved by the Hon'ble Commission as capital spare under Regulation 35(1)(6) as per the Tariff Regulations 2019.

xiii. Vacuum Pump

466. It is submitted that present vacuum pumps were supplied under the plant package along with the Project commissioning (supplied in 2011 for Unit 1 and 2012 for Unit 2).

467. All pumps have been in service since commissioning of the respective Units. The vacuum pumps have cast iron impellers which have a service life of about 5 year. Due to the metallurgy, impellers get worn out due to heavy erosion during their service life. Even with welding repair interventions and timely inspections, it is extremely difficult to extend the service life beyond 6-6.5 years without any compromise with operational performance.

468. The Original Equipment Manufacturer (M/s Edwards ltd.) does not recommend any major welding repairs on the impeller as it compromises the safety of impeller during operation. The weld metal deposit does not attain the same strength as original casting and it creates local stresses on the impeller material causing cracks in the material which leads to catastrophic failure of the impeller.

469. During Unit 1 Annual Overhaul (AOH) in November - December 2017 both the vacuum pumps were inspected for Unit 1. Heavy erosion was observed at Unit 1 vacuum pump impellers. Hence, 1 no spare vacuum pump available under Project mandatory spares was installed in place of 01 no pump and local repair was made for the other pump.

470. Similarly, heavy erosion was also recorded at both the impellers at Unit 2 during

its AOH in May-2019. Impeller blade and casing damage has occurred due to dislodging of the worn-out blade causing permanent damage to other blades as well as the casing.

471. Therefore, capital expenditure of Rs. 529.49 Lakh (Rs. 127.68 Lakh, Rs. 85.58 Lakh, Rs. 262.80 Lakh and Rs. 53.43 Lakh respectively) for the procurement of vacuum pumps was incurred which may kindly be approved by the Hon'ble Commission. The said expenditure falls within the scope and purview of Regulation 35(1)(6) of the Tariff Regulations 2019.

xiv. Control Valves

472. The servo valve for the HP bypass, which plays a crucial role in the reliable operation and safety of the power plant, was found to be faulty. As reliable operation is essential, it was promptly replaced with a spare available in the capital stock. Petitioner incurred total expenditure of Rs. 3.30 Lakh in FY 2023-24 replacement of capital spare which may kindly be approved by Hon'ble Commission under Regulation 35(1)(6) of Tariff Regulations 2019 as the Petitioner claims the control valve in capital spare.

xv. Capital Spares Replenishment

473. The expense of Rs. 110.29 lakh for FY 2021-22, Rs. 1753.36 lakh for FY 2022-23 and Rs. 646.53 lakh for 2023-24 related to Capital Spares Replenishment is provided in FORM 17 of the Tariff Formats along with above claimed Capital Spares and the same may kindly be referred. These Capital Spares have actually have been consumed during 2019-24 and, therefore, qualify as Capital Spares under Regulation 35(1)(6) of Tariff Regulations 2019, which may kindly be approved by Hon'ble Commission.

xvi. Total O&M Expanses:

474. Pursuant to aforesaid Regulations, actual expenses and following the approach of the Hon'ble Commission, the O&M expenses claimed for Truing-up for each year of the Tariff Period are as follows:

Table 30: O&M Expenses for the period 2019-24 (Rs. lakh)

S. No.	Particulars	2019-20	2020-21	2021-22	2022-23	2023-24
1	**O&M expenses under Reg.35(1) (Rs. Lakh/ MW)**	22.51	23.30	24.12	24.97	25.84
1a	Normative	23635.50	24465.00	25326.00	26218.50	27132.00
2	**O&M expenses under Reg.35(6)**					
2a	Water Charges	1600.66	1773.85	2149.43	2236.33	2537.69
2b	Security expenses	723.82	834.98	918.57	1056.85	1039.65
2c	Capital Spares	381.60	613.70	1262.40	2647.89	909.73
3	Ash Disposal expenses	2883.40	3719.98	3023.57	3337.21	5832.29
	Total O&M Expenses	**29224.98**	**31407.51**	**32679.97**	**35496.78**	**37451.36**

Re. INTEREST ON WORKING CAPITAL

475. Regulation 34 of the Tariff Regulations 2019 provides as under:

> *"34. Interest on Working Capital:*
>
> *(1) The working capital shall cover:*
>
> *(a) For Coal-based/lignite-fired thermal generating stations:*
>
> *(i) Cost of coal or lignite and limestone towards stock, if applicable, for 10 days for pit-head generating stations and 20 days for non-pit-head generating stations for generation corresponding to the normative annual plant availability factor or the maximum coal/lignite stock storage capacity whichever is lower;*
>
> *(ii) Advance payment for 30 days towards cost of coal or lignite and limestone for generation corresponding to the normative annual plant availability factor;*

(iii) Cost of secondary fuel oil for two months for generation corresponding to the normative annual plant availability factor, and in case of use of more than one secondary fuel oil, cost of fuel oil stock for the main secondary fuel oil;

(iv) Maintenance spares @ 20% of operation and maintenance expenses including water charges and security expenses;

(v) Receivables equivalent to 45 days of capacity charge and energy charge for sale of electricity calculated on the normative annual plant availability factor; and

(vi) Operation and maintenance expenses, including water charges and security expenses, for one month.

.....

(2) The cost of fuel in cases covered under sub-clauses (a) and (b) of clause (1) of this Regulation shall be based on the landed fuel cost (taking into account normative transit and handling losses in terms of Regulation 39 of these regulations) by the generating station and gross calorific value of the fuel as per actual weighted average for the third quarter of preceding financial year in case of each financial year for which Tariff is to be determined:

Provided that in case of new generating station, the cost of fuel for the first financial year shall be considered based on landed fuel cost (taking into account normative transit and handling losses in terms of Regulation 39 of these regulations) and gross calorific value of the fuel as per actual weighted average for three months, as used for infirm power, preceding date of commercial operation for which Tariff is to be determined.

(3) Rate of interest on working capital shall be on normative basis and shall be considered as the bank rate as on 1.4.2019 or as on 1st April of the year during the Tariff period 2019-24 in which the generating station or a unit thereof or the transmission system including communication system or element thereof, as the case may be, is declared under commercial operation, whichever is later:

Provided that in case of Truing-up, the rate of interest on working capital shall be considered at bank rate as on 1st April of each of the financial year during the Tariff period 2019-24.

(4) Interest on working capital shall be payable on normative basis notwithstanding that the generating company or the transmission licensee has not taken loan for working capital from any outside agency."

476. This Hon'ble Commission *vide* Order dated 08.01.2022 in Petition No. 408/GT/2020 had approved Interest on Working Capital pertaining to the

Generating Station as shown in the following Table:

Table 31: Approved Interest on Working Capital of Generating Station during Tariff Period 2019-24 (Rs. lakh)

Particulars	2019-20	2020-21	2021-22	2022-23	2023-24
Working Capital – Cost of Coal for Stock – 20 Days	11266.15	11266.15	11266.15	11266.15	11266.15
Working Capital – Cost of Coal for generation – 30 Days	16899.20	16899.22	16899.22	16899.22	16899.22
Working Capital for O&M expenses – 1 month of O&M Expenses	2197.81	2288.65	2384.26	2484.77	2590.19
Working Capital – Cost of secondary Fuel Oil – 2 months	315.50	314.64	314.64	314.64	315.50
Working Capital for Maintenance Spares	5274.74	5492.77	5722.21	5963.45	5674.87
Working Capital for Receivables (Fixed Charges for 2 months)	12427.67	13037.68	13544.78	13387.75	13244.30
Working Capital for Receivables (Variable Charges for 2 months)	25582.51	25582.51	25582.51	25582.51	25582.51
Total Working Capital	73963.61	74881.62	75713.77	75898.49	76114.33
Rate of Interest	12.05%	11.25%	10.50%	10.50%	10.50%
Interest on Working Capital	**8912.61**	**8424.18**	**7949.95**	**7969.34**	**7992.01**

477. Due to revision in the various components of Annual Fixed Charges, as discussed above, the interest on working capital is revised. The revised Interest on Working Capital for the 2019-24 tariff period for the purpose of Truing-up is shown in the Table below:

Table 32: Interest on Working Capital of Generating Station during Tariff Period 2019-24 (Rs. lakh)

Particulars	2019-20	2020-21	2021-22	2022-23	2023-24
Working Capital – Cost of Coal for 50 Days	28393.18	26540.08	24922.74	27205.37	27540.63
Working Capital for O&M expenses – 1 month of O&M Expenses	2163.33	2256.15	2366.17	2459.31	2559.11
Working Capital – Cost of secondary Fuel Oil – 2 months	308.81	297.58	244.32	299.91	427.02
Working Capital for Maintenance Spares	5192.00	5414.77	5678.80	5902.34	6141.87
Working Capital for Receivables - 2 months	38336.28	36601.15	35601.39	38721.85	39424.77
Total Working Capital	74393.61	71109.73	68813.42	74588.78	76093.40
Rate of Interest	12.05%	11.25%	10.50%	10.50%	10.50%
Interest on Working Capital	**8964.43**	**7999.84**	**7225.41**	**7831.82**	**9131.21**

478. The Petitioner humbly requests the Hon'ble Commission to allow the interest on working capital for the 2019-24 tariff period as shown in the above table

Re. SUMMARY OF ANNUAL FIXED CHARGES

479. Based on the above submissions the Petitioner has computed the annual fixed charges for 2019-24. The Hon'ble Commission is requested to allow the same shown as below:

Table 33: Annual Fixed Charges claimed for the period 2019-24 (Rs. lakh)

Particular	2019-20	2020-21	2021-22	2022-23	2023-24
Depreciation	23564.71	23678.33	25256.89	27271.52	27773.39
Interest on Loan	13292.43	11086.83	10855.94	11535.36	10450.13
Return on Equity	27064.28	27175.33	29346.67	31543.12	31689.17
Interest on Working Capital	8964.43	7999.84	7225.41	7831.82	9131.21
O&M Expenses	29224.98	31407.51	32679.97	35496.78	37451.36
Annual Fixed Charges	**102110.83**	**101347.86**	**105364.88**	**113678.60**	**116495.25**

Re. TARIFF PROPOSAL FOR THE TARIFF PERIOD 2024-29

480. This Section deals with the Tariff Proposal of the Petitioner for the Tariff Period 2024-29, which is based on the Tariff Regulations 2024 specified by this Hon'ble Commission. As stated earlier the entire installed capacity of 1050 MW has been contracted with Long Term Beneficiaries and, hence, the entire Installed Capacity of 1050 MW for the Petitioner's Generating Station is projected as Regulated Capacity for the Tariff Period 2024-29.

Re. Capital Cost claimed for the Tariff Period 2024-29

481. It is submitted that in terms of Tariff Regulations 2024, the closing capital cost as on 31.03.2024 has been considered as opening Capital Cost as on 01.04.2024. Based on above, the closing Capital Cost at Rs. 565278.70 Lakh for FY 2023-24 as proposed in the above Truing-Up Sections for the Tariff Period 2019-24 has been considered as the Opening Capital Cost for FY 2024-25 and considering yearly

additions/deletions proposed thereafter, the closing GFA works out to Rs. 604565.29 Lakh for FY 2028-29 as shown in the following Table:

Table 34: Gross Block over the Period FY 2024-25 to FY 2028-29 (Rs. lakh)

Sr No.	Particulars	2024-25	2025-26	2026-27	2027-28	2028-29
1	Opening Capital Cost	565278.70	572619.86	581005.82	584627.02	602045.69
2	Add: Addition during the year / period	8658.28	10039.55	4763.61	19193.86	2825.00
3	Less: De-capitalisation during the year / period	1317.11	1653.59	1142.42	1775.18	305.41
4	Less: Reversal during the year / period	0.00	0.00	0.00	0.00	0.00
5	Add: Net Discharges during the year / period	0.00	0.00	0.00	0.00	0.00
6	Closing Capital Cost	**572619.86**	**581005.82**	**584627.02**	**602045.69**	**604565.29**
7	Average Capital Cost	568949.28	576812.84	582816.42	593336.35	603305.49

482. As per Tariff Regulations 2024, Return on Equity in respect of Additional Capitalization after the cut-off date shall be computed at base rate of 15.5% for works within original scope and for works beyond the Original Scope excluding Additional Capitalization due to Change in Law, shall be computed at the weighted average rate of interest on actual loan portfolio of the generating station. Further, Supplementary Tariff for installation of Emission Control System ("**ECS**") due to

Change in Law is to be determined separately and, hence, the current proposal does not include Additional Capitalization or Tariff for such ECS, which shall be filed separately during 2024-29 at appropriate time. The Petitioner has, therefore, computed separate stream for Additional Capitalisation within the Original Scope and Additional Capitalisation beyond the Original Scope as shown in the following Table.

Table 35: Proposed Capital Cost Under Original Scope of Work (Rs. Lakh)

Sr No.	Particulars	2024-25	2025-26	2026-27	2027-28	2028-29
1	Opening Capital Cost	560974.88	566463.78	572610.74	575368.33	579268.14
2	Add: Addition during the year/period	6806.02	7800.55	3900.00	5675.00	2350.00
3	Less: De-capitalisation during the year/period	1317.11	1653.59	1142.42	1775.18	305.41
4	Less: Reversal during the year/period	0.00	0.00	0.00	0.00	0.00
5	Closing Capital Cost	566463.78	572610.74	575368.33	579268.14	581312.74
6	Average Capital Cost	563719.33	569537.26	573989.53	577318.24	580290.44

Table 36: Proposed Capital Cost beyond the Original Scope of Work (Rs. Lakh)

Sr No.	Particulars	2024-25	2025-26	2026-27	2027-28	2028-29
1	Opening Capital Cost	4303.82	6156.08	8395.08	9258.69	22777.55
2	Add: Addition during the year/period	1852.26	2239.00	863.61	13518.86	475.00
3	Less: De-capitalisation during the year/period					
4	Less: Reversal during the year/period	0.00	0.00	0.00	0.00	0.00
5	Closing Capital Cost	6156.08	8395.08	9258.69	22777.55	23252.55

Sr No.	Particulars	2024-25	2025-26	2026-27	2027-28	2028-29
6	Average Capital Cost	5229.95	7275.58	8826.88	16018.12	23015.05

483. The proposed Additional Capitalization within the Original Scope and Additional Capitalization beyond the Original Scope as explained in the subsequent paragraphs has been considered during 2024-29.

Re. ADDITIONAL CAPITAL EXPENDITURE

484. It is humbly submitted that the proposed Additional Capitalization during the period 2024-29 for the Petitioner's Generating Station includes the proposal for the Capitalization of the expenditures under the Original Scope of Work and beyond original scope applicable after the Cut-off Date of the Project as per the provisions of the Tariff Regulations 2024. The summary of Additional Capital Expenditure proposed for the period 2024-29 is given in the Table below:

Table 37: Summary of Additional Capital Expenditure proposed for the period 2024-29 (Rs. Lakh)

Sr No.	Name of the Scheme	Regulation	2024-25	2025-26	2026-27	2027-28	2028-29	Total
(C)	**Additional Capitalisation within the original scope and after the cut-off date:**							
i.	Centrifugal compressor and motor for BTG	25(2)(c)				1000.00		1000.00
ii.	Centrifugal Compressors for Ash Plant	25(2)(c)		1454.00	500	1000		2954.00
iii.	ID fan motor with VFD replacement	25(2)(c)	1200.00	1251.55				2451.55
iv.	Laboratory Instruments	25(2)(a) and 25(2)(c)	50.00	50.00	115.00			215.00
	- Chemical laboratory	25(2)(a) and 25(2)(c)	50.00	50.00	65.00			165.00
	- C&I Laboratory	25(2)(a) and 25(2)(c)			50.00			50.00
v.	Infrastructure - Admin	25(2)(a) & 102	50.00	50.00	50.00	50.00	50.00	250.00
vi.	AVR Retrofitting for Unit 1 &2	25(1)(b) and 25(2)(b)			250.00	250.00		500.00
vii.	Conveyor Belt	25(2)(a) and 25(2)(c)	300.00	200.00	250.00	350.00		1100.00
viii.	Service Water	25(1)(b) and	75.00					75.00

Sr No.	Name of the Scheme	Regulation	2024-25	2025-26	2026-27	2027-28	2028-29	Total
	Pipeline Revamping Work	25(2)(a)						
ix.	Retrofitting of Boiler Elevator	25(2)(a)				100.00	100.00	200.00
x.	Station Battery Bank	25(2)(a)	500.00					500.00
xi.	Upgradation of Mill & Compressor HT Breakers	25(2)(a) and 25(2)(d)	60.00	60.00	60.00			180.00
xii.	Upgradation of AHP & CHP HT & LT Breakers	25(2)(a) and 25(2)(d)	125.00	125.00	125.00	125.00	50.00	550.00
xiii.	Testing Equipment for Electrical Equipment	25(2)(a) and 25(2)(c)	25.00	25.00	25.00			75.00
xiv.	Fire Hydrant System	25(1)(b) and 26(1)(d)	157.37	150.00	150.00	150.00		607.37
xv.	Replacement of Fire Extinguisher	25(1)(b) and 25(2)(a)	25.00					25.00
xvi.	Reheater Upgradation	25(2)(a),25(2)(b)	500.00	500.00	500.00	500.00	500.00	2500.00
xvii.	IT Infrastructure	25(2)(a) and 25(2)(b)	95.57	50.00	50.00	50.00	50.00	295.57
viii.	Upgradation of IT network Switches	25(2)(b) and 25(2)(c)	460.00					460.00
xix.	Installation of SOC for all PLC	25(2)(b)		200.00	200.00			400.00
xx.	Upgradation of Max DNA DCS Hardware System	25(2)(a) and 25(2)(c)				1000.00	1000.00	2000.00
xxi.	Upgradation of Real Time Vibration Analysis	25(2)(a) and 25(2)(c)		250.00	250.00			500.00
xxii.	Upgradation of MRS and ZLD PLC	25(2)(a) and 25(2)(c)		75.00	75.00			150.00
xiii.	Replacement of H2 plant electrolysis module	25(2)(a)	300.00	300.00				600.00
xiv.	Ceramic Lining of Coal Mill	25(2)(a) and 25(2)(b)	180.04					180.04
xxv.	Upgradation of Main Turbine and TDBFP, EHTC System Components	25(2)(a) and 25(2)(c)		200.00	200.00			400.00
xvi.	Replacement of Fire Tenders	25(1)(b) and 25(2)(a)	109.40					109.40
xvii.	Replacement of pneumatic	25(2)(a) and 25(2)(c)			200.00	200.00		400.00

Sr No.	Name of the Scheme	Regulation	2024-25	2025-26	2026-27	2027-28	2028-29	Total
	actuator and control mechanism							
viii.	Economizer Coil Refurbishment	25(2)(a), 25(2)(b) and 26(1)(i)	600.00	600.00	600.00	600.00	600.00	3000.00
xix.	ESP Internals	25(1)(b) and 25(2)(a)	393.64	510.00	300.00	300.00		1503.64
xxx.	RAPH I/L and O/L dampers	25(2)(b) and 26(1)(i)	200.00	250.00				450.00
xxi.	Max DNA DCS Upgradation with Cyber Security SOC	25(2)(b) and 25(2)(c)	1400.00	1400.00				2800.00
xxii.	SCADA Upgradation	25(2)(b) and 25(2)(c)		100.00				100.00
	Sub-Total		**6806.02**	**7800.55**	**3900.00**	**5675.00**	**2350.00**	**26531.57**
(D)	**Additional Capitalization beyond Original Scope of Work**							
Sr. No.	**Name of the Scheme**	**Regulation**	**2024-25**	**2025-26**	**2026-27**	**2027-28**	**2028-29**	**Total**
i.	Coal Pit Run-off Mechanized Drainage systems	26(1)(c)			388.61			388.61
ii.	Construction of EMD Workshop	26(1)(b) and 26(1)(i)	60.00	50.00				110.00
iii.	Stacker cum Reclaimer	26(1)(g) and 26(1)(i)				9543.86		9543.86
iv.	Fire Sealing & Painting for Cables	26(1)(d)	25.00	25.00	25.00	25.00	25.00	125.00
v.	Procurement of Cup Lock Scaffolding	26(1)(b) and 26(1)(d)	200.00	200.00	200.00	100.00		700.00
vi.	Zero Land Fill Waste Processing Unit	26(1)(b)	120.00					120.00
vii.	Ash Silo Loading Arrangement for Railway Wagon	26(1)(e) and 26(1)(i)				2500.00		2500.00
viii.	Extension of Store	26(1)(d) and 26(1)(b)	95.00	85.00				180.00
ix.	Concertina Coil on Top of Boundary Wall	26(1)(d)		50.00	50.00	50.00	50.00	200.00
x.	Installation of CCTV	26(1)(d)	120.00	225.00	150.00			495.00
xi.	Safety (Platform in Coal mill area)	26(1)(d)	100.00	50.00	50.00			200.00
xii.	Upgradation of HP Bypass System	26(1)(i)	650.00	650.00				1300.00
xiii.	Road Over Bridge	26(1)(b), 26(1)(d) and 26(1)(i)				1300.00		1300.00
xiv.	Unit wise segregation of PWS HT Board	26(1)(i)					400.00	400.00

Sr No.	Name of the Scheme	Regulation	2024-25	2025-26	2026-27	2027-28	2028-29	Total
xv.	Relaibility (Structural Strengthening - BTG, CHP)	26(1)(d) & 26(1)(i)	480.86	200.00				680.86

Grand Total (C+D)			**8658.28**	**10039.55**	**4763.61**	**19193.86**	**2825.00**	**45480.30**

B.II.C. Additional Capitalisation within the Original Scope and after the cut-off date

xvii. Centrifugal compressor and motor for BTG

485. It is submitted that this Hon'ble Commission, in the Order dated 08.01.2022 in Petition No. 408/GT/2020, had approved the replacement of screw air compressors with centrifugal air compressors based on the recommendations of the OEM. A total amount of Rs. 750 Lakh was sanctioned for this replacement during the control period of 2019–24, with allocations of Rs. 350 Lakh in FY 2020–21 and Rs. 400 Lakh in FY 2021–22.

486. The Petitioner respectfully submits that the order for the replacement of the screw compressors has been placed with the channel partner of a new OEM in FY 2022–23, with the original delivery schedule planned for FY 2023–24 and would now be completed in FY2027-28. The revised project cost is estimated at Rs. 1000 Lakh, proposed to be capitalized in FY 2027–28.

487. The reasons for the time delay and cost overrun have been detailed in the true-up section of this Petition and are not repeated here for the sake of brevity.

488. Through this instant Petition, the Petitioner humbly seeks kind approval of the Hon'ble Commission for the replacement of the screw compressors of the Boiler Turbine and Generator (BTG) system with centrifugal compressors during the current tariff period 2024–29, as per Regulation 25(2)(c) of the Tariff Regulations 2024.

xviii. Centrifugal Compressors for Ash Plant

489. It is submitted that this Hon'ble Commission, in the Order dated 08.01.2022 in Petition No. 408/GT/2020, approved the replacement of the screw air compressors with centrifugal air compressors based on the OEM's recommendation. An amount of Rs. 1200 Lakh was sanctioned for this replacement during the 2019–24 period with Rs. 300 Lakh each in FY 2020-21, FY 2021-22, FY 2022-23 and FY 2023-24.

490. As, elaborated in the True-up Section, the Petitioner respectfully wishes to bring to the attention of Hon'ble Commission that after competitive bidding the order for replacement has already been placed on 08.06.2024 for 4 compressors for Rs. 1292.10 Lakh and along with associated incidental expenditure a total amount of Rs 1453.52 Lakh is expected to be capitalized in FY 2025-26. The reasons for the delay have been elaborated upon in the true-up section, which are not being repeated here for the sake of brevity. Hon'ble Commission is requested to approve Rs. 1453.52 Lakh in FY 2025-26 under Regulation 25(2)(c).

491. For the same reasons due to which 6 screw compressors were allowed to be replaced with centrifugal compressors, the Petitioner *vide* the instant Petition also humbly seeks approval to replace the remaining 8 screw compressor in the ash handling system with 4 centrifugal compressors of similar capacity during the current tariff period 2024-29 under Regulation 25(2)(c) of the Tariff Regulations 2024. The estimated cost is Rs. 1500 Lakh for balance screw compressors, proposed to be capitalized as Rs. 500 Lakh in FY 2026–27 and Rs. 1000 Lakh in FY 2027–28.

xix. ID fan motor with VFD replacement

492. As explained in True up section, this scheme was approved during 2019-24, but

has been deferred to 2024-29 due to uncontrollable reasons, which are not being repeated here for the sake of brevity.

493. It is estimated that the capital expenditure required for procurement and commissioning of this equipment is Rs. 2451.55 lakh and it will be executed in FY 2024-25 (Rs. 1200 Lakh) and FY 2025-26 (1251.55 Lakh). Accordingly, the Petitioner humbly requests the Hon'ble Commission to allow the above additional capital expenditure under Regulation 25 (2)(c) of the Tariff Regulations 2024.

xx. Laboratory Instruments

i. Chemical Laboratory

494. It is submitted that the Petitioner's Chemical laboratory instruments are being used for the day-to-day analysis of various parameters. The laboratory was established in 2011, while the instruments were supplied in 2010. Laboratory instruments are getting old i.e., more than 10 years necessitating the procurement of new instruments as the ones currently being used at the site are beyond their useful life. The aging effect causes measurement error or inaccuracy of instruments which may severely hamper the efficiency of the plant. Spares and services support for the old instruments are restricted due to component obsolescence.

495. The OEMs have declared the obsolesce of most spares and stated that most of the instruments cannot be serviced or repaired due to the non-availability of spare and changes in software and technology development as the same have become obsolete in the market. A list of equipment along with available Certificate of Obsolescence issued by OEM in respect of Chemical Laboratory instruments is annexed herewith and marked as **ANNEXURE P/44-A (COLLY.)**.

496. It is pertinent to note that till the time spares were available with the Petitioner, it

continued with the existing setup. Accurate and timely measurement of necessary parameters pertaining to chemical, environmental, water, coal, air and other operational parameters are critical for the smooth and normal operation of the Generating Units.

497. In view of the above constraints i.e., obsolescence of the laboratory equipment and criticality of these equipment in the system for Plant operations, the Petitioner has no choice but to go for complete upgradation of the entire system to a higher version as recommended by OEM in a phased manner from FY 2024-25 to FY 2026-27.

498. In terms thereof, an estimated expenditure of Rs. 165 Lakh as per the initial offer, spread over the years FY 2024-25 to FY 2026-27, shall be incurred for the upgradation of Laboratory instruments. Accordingly, the Petitioner humbly requests the Hon'ble Commission to allow the above additional capital expenditure under Regulation 25(2)(a) and 25(2)(c) of the Tariff Regulation 2024.

ii. C&I Laboratory

499. It is submitted that in the Petitioner's generating station, Unit 1 & Unit 2 all field instruments are being calibrated by standard Master calibration equipments of the C&I (Control and Instrumentation) Laboratory. In this regard, the following may be appreciated:

(a) Instrument calibration is a crucial process to ensure that field instruments provide accurate and reliable measurements which is essential for maintaining the accuracy, precision and reliability of field instruments over time for quality control and regulatory compliance, contributing to the overall efficiency and safety of industrial processes.

(b) The Calibration laboratories provide documented evidence of the accuracy

and traceability of measurements, ensuring that instruments' accuracy is tied to national or international standards, and fostering confidence in measurement results.

(c) Furthermore, by regularly calibrating instruments and documenting the calibration process, laboratories can provide information on measurement uncertainty, aiding in the decision-making process, contributing to effective equipment lifecycle management as they help to identify and address issues with instruments promptly, extending their useful life and avoiding unexpected failures or inaccuracies.

(d) Conversely, the non-availability of calibrating equipment would lead to Inaccurate Measurements, Quality Issues, Compliance and Regulatory Issues, Risk of Safety Incidents, Unreliable testing and analysis, Increased Cost, Loss of customer trust, Reduced Operational efficiency and Audit Failures.

500. In view thereof, it is crucial to have laboratory equipment capital expenditures so that equipment are technologically up to date. The reason for the upgradation of the calibration instruments is as follows:

(a) The use of cutting-edge technologies such as artificial intelligence and machine learning increases automation which can reduce human error and enhance the efficiency of various processes, from sample preparation to data analysis, improved precision, promote miniaturization and portability which is beneficial in fields such as point-of-care diagnostics, where compact and portable devices enable on-site testing and real-time analysis.

(b) The Calibration instruments use Data Connectivity and Integration as the modern lab equipment are designed with improved data connectivity,

allowing seamless integration with Laboratory Information Management Systems (LIMS) and other data management platforms and facilitating efficient data sharing, analysis and collaboration.

(c) Furthermore, the advancements in Analytical Techniques and Sensitivity of Instruments to contribute to more accurate and precise measurements. This is crucial in fields like analytical chemistry, genomics and proteomics, where researchers demand increasingly sophisticated tools.

(d) Lastly, Sustainability and Energy Efficiency of the upgraded technology aid in reducing the overall environmental impact of laboratory operations.

(e) Therefore, there is an undeniable need to upgrade/procure new calibration instruments to optimally utilize the benefits of modern age technology. Existing instruments are old, outdated and have outlined their service life and, hence, require urgent replacement.

501. It is further submitted that the Calibration lab equipment falls under capital expenditures and is justified due to its nature as a long term asset, the significant upfront cost, its contribution to organizational productivity and alignment with accounting principles that guide financial reporting and decisions. They are considered a long-term asset as its useful life extends beyond a single accounting period, making them eligible for capitalization, also calibration lab equipment involves a substantial upfront cost and capitalizing these costs allows organizations to spread the expense over the useful life of the equipment, reflecting a more accurate representation of the economic benefit derived from the assets.

502. Accordingly, the Petitioner proposes to procure theses calibration equipment at the cost of Rs. 50 Lakh in 2026-27. A copy of the list of calibration equipment is

MAITHON POWER LIMITED

annexed herewith and marked as **ANNEXURE P/44-B**.

503. The total estimated expenditure for the Laboratory Instruments is Rs. 215 lakh for the period 2024-29. It is humbly requested before the Hon'ble Commission to approve the above expenditure under Regulations 25(2)(a) & 25(2)(c) of the Tariff Regulations 2024.

xxi. Infrastructure - Admin

504. It is submitted that the Infrastructure of the Guest house at Gogna has become very old and the conditions are deteriorating. To give the guest house a proper shape it has now become mandatory to repair and/or replace the old set up to improve the quality of services.

505. It is, therefore, mandatory to provide new kitchen equipment and utensils at Guest Houses, Township and Field hostels, which are long pending. Also, new Beds, chairs (Dining, Office, conference room) and sofas need to be provided. Wooden cupboards in all these areas need to be replaced with steel almirah because those have been damaged and are beyond repair. New electrical gadgets like geysers, fridge, wet grinders, mixer grinders etc. need to be provided in different locations. Few doors and door frames in different locations need to be changed as these are old and have been damaged by termite or have rotten out. ACs of almost all locations are beyond repair and need to be replaced with new ones.

506. Given the dilapidated condition of the guest house, the Petitioner seeks to repair/replace the old set up and comply with the provisions of Factories Act, 1948 which stipulates, maintenance of shelters for the employees in a clean and ventilated manner. The relevant extract is reproduced below for the ease of reference-

> *"47. Shelters, rest rooms and lunch rooms.—*

(1) In every factory wherein more than one hundred and fifty workers are ordinarily employed, adequate and suitable shelters or rest rooms and a suitable lunch room, with provision for drinking water, where workers can eat meals brought by them, shall be provided and maintained for the use of the workers:

Provided that any canteen maintained in accordance with the provisions of section 46 shall be regarded as part of the requirements of this sub-section: Provided further that where a lunch room exists no worker shall eat any food in the work room.

(2) The shelters or rest rooms or lunch rooms to be provided under sub-section (1) shall be sufficiently lighted aid ventilated and shall be maintained in a cool and clean condition.

(3) The State Government may— (a) prescribe the standards in respect of construction, accommodation, furniture and other equipment of shelters, rest rooms and lunch rooms to be provided under this section; (b) by notification in the Official Gazette, exempt any factory or class or description of factories from the requirements of this section"

507. In view thereof, the Petitioner prays to the Hon'ble Commission to admit the aforesaid Additional Capital Expenditure of Rs. 250 lakh under Regulation 25(2)(a) and 102 of Tariff Regulations 2024 to prevent any accidents due to the decaying main infrastructure of the building and to standardize the service quality within the guest houses/field hostel and township.

xxii. AVR Retrofitting for Unit – 1 & 2

508. It is submitted that with the enforcement of modern-day power sector new norms and requirements like minimum technical loading, Automatic generation control, frequent load block revision and meeting other future requirements, the response time with the reliability of AVR needs to be taken care of.

509. Notably, in the Petitioner's Plant, Unit-1&2 in-service AVR is of BHEL make. Major problems associated with in-service AVR are Display unit failure, screen hanging, fault in standby channel, unreal fault alarm annunciation, diagnosis issues, obsolescence of technology, frequent card failure, dependency on OEM experts, long maintenance periods and reliability issues. This is causing difficulty in

adhering to the strict automatic generation control and other regulations.

510. Accordingly, the Petitioner has planned retrofitting of the AVR for Unit 1&2 for complying with later regulations and humbly requests the Hon'ble Commission to allow this additional capital expenditure of Rs. 500 Lakh spread equally in FY 2027-28 and FY 2028-29 under Regulation 25(1)(b) and 25(2)(b) of the Tariff Regulations 2024.

xxiii. Conveyor Belt

511. The conveyor belt is a critical component in the coal handling process, facilitating the efficient movement of coal. The existing conveyor belt system provided by OEM (Tech pro) has been in operation since commissioning. Over this period, routine maintenance and repairs have been conducted to keep the system operational. However, recent assessments have revealed significant wear and tear, posing a potential risk of safety of working personnel as well as disruptions to the production process.

512. Hence, the deteriorating condition of the existing system raises concerns about reliability, safety and increased downtime due to potential failures. The replacement is necessary to enhance safe working operational efficiency, reduce maintenance time and mitigate the risk of unexpected breakdowns.

513. Considering the criticality of the conveyor belt system to maintain the generation schedule and its obsolescence (as the OEM is not there for any support), the replacement of the conveyor belt across the plant is planned in a phased manner from FY 2024-25 to FY 2027-28. The Petitioner sought quotation from three available suppliers for four types of belts, but only M/s Krishna Belts Pvt limited submitted quotation for all four types. Considering the criticality of the conveyor belt, the Petitioner has already initiated the process of procurement and order is

expected to be placed in FY 2024-25.

514. An estimated expenditure of Rs. 1100 Lakh is expected based on rates given by Supplier, who has quoted minimum 5 years belt life. In this regard, a copy of the quotation given by the new supplier (Krishna Belt Pvt Ltd.) is annexed herewith and marked as **ANNEXURE P/45**.

515. Accordingly, the Petitioner humbly requests the Hon'ble Commission to allow the above additional capital expenditure of Rs. 1100 Lakh under Regulation 25(2)(a) and 25(2)(c) of the Tariff Regulations 2024.

xxiv. Service Water Pipeline revamping work

516. The service water pipeline is an integral part of the Coal handling plant and plays a multifaceted role in supporting critical operations such as the Fog canon system in the track hopper, Dry Fog Dust Suppression (DFDS) system in the coal conveyor, NAVIS system, Rain gun in coal yard and wharf area, which is not only helping to control the dust emission but also contributing to meet the environmental norms. These pipelines are the backbone of the dust suppression system and ensure a consistent supply of water.

517. On account of aging, the existing service water pipeline system faces challenges such as due to heavy corrosion, multiple leaks and reduced capacity causing operational disruptions and increase in environmental dust. The current state not only jeopardizes the efficiency of the dust control system but also poses environmental and safety risks.

518. Accordingly, in order to comply with norms of ground level AAQI as per Notification dated 18.11.2009 issued by Central Pollution Control Board (CPBP) it is necessary to undertake works pertaining to service water pipeline revamping/replacement. [***Refer: Annexure P/15***]. It is further submitted that

MAITHON POWER LIMITED

considering the urgency of the instant scheme, Petitioner has incurred the cost of about Rs 75 Lakh in FY 2024-25.

519. Accordingly, the Petitioner humbly requests the Hon'ble Commission to allow the above additional capital expenditure of Rs. 75 Lakh for FY 2024-25 under Regulation 25(1)(b) and 25(2)(a) of the Tariff Regulations 2024.

xxv. Retrofitting of Boiler Elevators

520. It is submitted that Boiler elevators (lifts) are necessary equipment to improve accessibility to the boiler, its day to day maintenance and its smooth functioning. The unavailability of the Elevator creates huge problem for material shifting from the ground to the Upper Elevation of Boiler.

521. Pertinently, during FY 2023-24, the Petitioner had some of the major maintenance work in the Unit 2 Boiler Elevator for Rope Replacement and the Compensating Chain replacement which also accounted for the unavailability of the Unit 2 Boiler Elevator for more than 120 Days.

522. Existing Elevator in both the Boilers (Kone Make 2000 kg, Passenger and Material, Rope and Sheeve System) have completed more than 10 years of active service life. While maximizing the useful life of existing Elevators is typically the most financially prudent option, serious issues can arise when the Elevator is unavailable during shutdown times. It must be appreciated that these elevators operate in rough conditions for material and goods handling at boiler elevation. As such, they are used very frequently and are, therefore, prone to high wear and tear. They cannot be equated to elevators operating under normal working conditions.

523. The Hon'ble Commission may appreciate that the repairs if undertaken would be costlier than the new unit as the issue of availability of the spare parts would not

fade away. Furthermore, the replaced elevator would be energy efficient and equipped with the latest models and technology, hence, saving time and cost of repairs on the maintenance. The proposed retrofitting also seeks to provide intangible benefits such as reducing the risk to the operation engineers for day to day maintenance and it will be available for all time runs with minimum breakdown.

524. The estimated capital expenditure on this count is Rs. 200 lakh across FY 2027-28 and FY 2028-29. Accordingly, the Petitioner humbly requests the Hon'ble Commission to allow the above additional capital expenditure under Regulation 25(2)(a) of the Tariff Regulations 2024.

xxvi. Station Battery Banks

525. It is submitted that batteries and battery chargers are the heart of the Direct Current (DC) system and, hence, they are very important for the protection and control of station and unit related processes. In case of system blackout/startup, batteries feed the DC equipment of the plant and switchyard equipment such as Motor Driven Boiler Feed Pump (MDBFP), Compressors, Lube Oil Pumps (LOPs) and emergency lighting thereby ensuring the safe shutdown of the plant.

526. The Petitioner submits that the existing 220V DC Station batteries are low maintenance Lead Acid (Flooded) Batteries and have completed more than 12 years of service and much more than charging-discharging cycles of its expected life.

527. It is pertinent to highlight that in the "*Report on Bank Health Survey*" for these batteries, Exide Industries Limited have found that (i) majority of the cells have bulged (ii) crack on sealing compound in 80% and (iii) some of cells are in deep discharge condition and have recommended that due to end of service life and

unsatisfactory performance due to above defects, the battery bank may be replaced. For ease of reference, the relevant extracts of the said report dated 20.04.2023 is reproduced below: -

> *"Location: 220V Stn. Battery Bank-1 (U#1).*
> *Yr. of Installation: 2009.*

> ***Recommendation: Battery Bank is completing its Service Life. You may plan for replacement of the battery bank with a new battery bank"***
> [***Emphasis Supplied***]

A copy of the Report issued by the Exide Industries Limited dated 20.04.2023 is annexed herewith and marked as **ANNEXURE P/46**.

Further, the serviceable life of these battery sets is 8 to 10 years under normal application.

528. Thus, it is essential to replace the existing battery set with the new one as they have outlived their life and to improve the overall reliability of the DC system and the safe operation of the plant.

529. It is planned that the batteries will be procured and replaced in FY 2024-25

through the tendering process at an estimated cost of Rs. 500 lakh. Accordingly, the Petitioner humbly requests the Hon'ble Commission to allow the above additional capital expenditure under Regulation 25(2)(a) of the Tariff Regulations 2024.

xxvii. Upgradation of Mill & Compressor HT Breakers of the main plant

530. It is submitted that HT breakers are critical for equipment safety and reliable unit generation. As coal mills and Instruments Air compressor feeders have the most frequent operation and have standby feeders which need to remain available for timely start-stop operations, their breakers are critical for Unit reliability.

531. It is further submitted that existing Mill and Instruments Air compressor HT Breakers have completed more than 12 years of operations. Due to frequent operations of these breakers, multiple breakdowns have occurred due to breaker internal mechanism failure, rack-in/rack-out assembly issues. As these feeders provide standby equipment frequently and are critical during Unit load variations and feeder changeovers, their non-availability due to issues in breakers affects Unit reliability.

532. Due to high number of operations, particularly SCED and other new operational mandates, these vacuum circuit breakers have served more than their service life of more than 20,000 switching. Pertinently, due to aging, frequent defects and breakdowns occur, thus, affecting unit reliability. Hence, it is planned for phase wise replacement of these breakers through an open tendering process.

533. In this regard, a copy of BHEL's Instruction Manual for O&M of Indoor Vacuum Switch Gear (relevant pages) showing life expectancy of 20000 switching operations is annexed herewith and marked as **ANNEXURE P/47**.

534. The estimated capital expenditure is Rs. 180 lakh across FY 2024-25, FY 2025-26

and FY 2026-27. Accordingly, the Petitioner humbly requests the Hon'ble Commission to allow the above additional capital expenditure under Regulation 25(2)(a) and 25(2) (d) of the Tariff Regulations 2024.

xxviii. Upgradation of AHP & CHP HT & LT Breakers

535. It is submitted that presently C&S make 415 V Air Circuit Breakers (ACB) are installed in Low Tension Main Switch Board (LTMSB) and Auxiliary Control Panel Control Centre (ACP PMCC) for both the Units. Total number of these breakers is 24 (2500 A) and 40 (800 A) installed in the plant which require replacement.

536. It is further submitted that existing HT and LT breakers in the CHP area have attained the age of more than 13 years with more than 20,000 operations. In this regard, GE manual specifies that breaker's normal service life is 20,000 operations. A copy of the GE Manual (relevant pages) is annexed herewith and marked as **ANNEXURE P/48.**

537. The ageing effect can be seen on LT breaker's performance with the high instances of breakdown which is mainly related to the failure of the operating and rack in-out mechanism. Since the majority of breakers are used in critical switchgears like Unit and station boards, hence, failure of any breaker in operation will directly lead to impact plant generation. Hence, in phase wise manner, HT and LT breakers need to be retrofitted.

538. It is humbly requested that the Hon'ble Commission may kindly allow the estimated additional capital expenditure of Rs. 550 lakh across the 2024-29 Tariff Period under Regulation 25(2)(a) and 25(2)(d) of the Tariff Regulations 2024.

xxix. Testing Equipment for Electrical Equipment

539. It is submitted that to guarantee the optimal performance of electrical installations, it is imperative to consistently monitor the condition of these

devices. The state of these devices is assessed using a variety of testing equipment. The Petitioner has a specific set of tools to supervise the condition of the installed devices. Some of tools devices have aged and require frequent regular maintenance.

540. Non-availability of these Instruments during their maintenance causes deferment of device schedule thereby compromising with reliability of these devices. Further, as time has progressed, new technologies have emerged to better maintain electrical devices. The following three testing equipment are proposed:

(a) Double make Tan Delta test kit;

(b) Meggr make 3 phase injection kit; and

(c) Yokogama high speed recorder.

541. Notably, the OEMs of these equipment have informed that these equipment have become obsolete/outlived their service life and minor or no support is available. In this regard, copies of the Emails exchanged with OEM in respect of testing equipment for electrical equipment are annexed herewith and marked as **ANNEXURE P/49**.

542. Therefore, the replacement of outdated testing devices and the incorporation of new technologies necessitate the procurement of new testing equipment, which is the pressing need of the hour.

543. It is estimated that the Capital expenditure required for procurement and commissioning of this equipment is Rs. 75 lakh through an open tendering process and it will be executed in FY 2024-25 to FY 2026-27. Accordingly, the Petitioner humbly requests the Hon'ble Commission to allow the above additional capital expenditure under Regulation 25(2)(a) and 25(2)(c) of the Tariff Regulations 2024.

xxx. Fire Hydrant System

544. It is submitted that this scheme is a continuation of Fire Hydrant System initiated in 2019-24 period. The Petitioner craves leave to reply upon the reason and justifications given in True up section in this regard.

545. The estimated capital expenditure is Rs. 607.37 lakh across FY 2024-25 to FY 2027-28. Accordingly, the Petitioner humbly requests the Hon'ble Commission to allow the above additional capital expenditure under Regulation 25(1)(b) and 26(1)(d) of the Tariff Regulations 2024.

xxxi. Replacement of Fire Extinguisher

546. It is submitted that the fire hydrant system is integral to Petitioner's plant safety measures, complemented by strategically placed fire extinguishers conforming to IS 2190 and fire load calculations. These extinguishers are crucial for Plant safety protocols, serving as immediate responses to potential fires, preventing substantial damage to plant assets and ensuring personnel safety. They play a pivotal role in preventing small fires from escalating, enabling swift containment before they endanger lives or cause extensive disruption.

547. Moreover, they enhance evacuation procedures by providing critical time for safe evacuation routes. Tailored to specific fire hazards, different extinguisher types cater to diverse fire classes, from combustibles to electrical equipment, ensuring targeted protection. Compliance with fire safety regulations is paramount, underscoring the need for regular maintenance and timely replacement of expiring extinguishers as per IS 2190 standards. A copy of the IS 2190:2010 standard specifying life of CO2 extinguisher as 25 years (relevant pages) is annexed herewith and marked as **ANNEXURE P/50**.

548. Accordingly, in FY 2024-25, the project focuses on replacing expiring CO2 fire

extinguishers to uphold safety standards and fulfil operational requirements. This initiative not only mitigates fire risks during the incipient stage but also enhances overall firefighting system reliability and performance across the plant, safeguarding assets and reinforcing our commitment to workplace safety and compliance. Accordingly, estimated expenditure of Rs. 25 Lakh is being proposed in FY 2024-25 under Regulation 25(1)(b) & 25(2)(a) of the Tariff Regulations 2024.

xxxii. Reheater Upgradation

549. It is submitted that this scheme is a continuation of reheater upgradation initiated in 2019-24 period. The reasons and justifications for this expenditure are provided in the true-up section and are not repeated herein for the sake of brevity.

550. Accordingly, the Petitioner proposes to replace balance tubes in a phased manner to enhance the reliability further noting the BHEL recommendations/improvements and in order to have better monitoring and control of tube metal excursions, installation of additional Manometric temperature measurement (MTM) thermocouples in Re-heater coils have to be undertaken over and above the existing ones immediately.

551. In addition to the installation of thermocouples, associated item viz. junction boxes, Distributed Control System ("**DCS**") hardware etc, are also required tio be installed. The estimated project cost is Rs. 500 Lakh in FY 2024-25, Rs. 500 Lakh in FY 2025-26, Rs. 500 Lakh in FY 2026-27, Rs. 500 Lakh in FY 2027-28, and Rs. 500 Lakh in FY 2028-29.

552. Therefore, the total estimated cost for the above works planned in the period 2024-29 is Rs. 2500 Lakh. Accordingly, the Petitioner humbly requests the Hon'ble Commission to allow the above additional capital expenditure under Regulation

25(2)(a) and 25(2)(b) of the Tariff Regulations 2024.

xxxiii. Infrastructure - IT

553. The Petitioner submits that the rapid technological advancement in the present era of digitalization has compelled the Petitioner to update the Hardware and Software continuously which is further in consonance with the Petitioner's Laptop allocation Policy. Under the Laptop Allocation Policy, the eligibility for new laptops arises after 4 years of their asset life so as to keep the software and hardware updated to prevent any cyber security breach.

554. The said Additional capitalization expenditure includes new Laptops, Desktops, printers which have been considered as per specific technical requirements of the departments. This is being proposed in compliance of Article 7(a) and (b) of CEA (Cyber Security In Power Sector) Guidelines 2021 (***Refer ANNEXURE P/17***) which are quoted below:

> *"Article 7 Phasing out of Legacy System*
> *a) As the life cycle of the Power System Equipment/System is longer than that of IT Systems deployed therein, the Responsible Entity shall ensure that all IT technologies in the Power System Equipment/System should have the ability to be upgraded.*
> *b) The Responsible Entity shall ensure that the Information Security Division shall draw the list of all communicable equipments/systems nearing end life or are left without support from OEM. Thereafter* ***CISO shall identify equipment/systems to be phased out from the list drawn, firm up their replacement plan and put up the replacement plan for approval before the Board of Directors."***
>
> [***Emphasis supplied***]

555. The estimated cost of the project is Rs. 295.57 lakh for the period 2024-29, The Petitioner prays to the Hon'ble Commission to approve the aforesaid Additional Capital Expenditure under the Regulation 25(2)(a) and 25(2)(b) of Tariff Regulations 2024.

xxxiv. Upgradation of IT Network Switches

556. It is submitted that with technological advancement, switchover from standalone virtual CISCO Aironet Access Point (Cisco Aps) are proposed across diverse locations within the Petitioner's generating station, including the CHP, Site Office, Control Room, and Gogna office. The shift towards virtual servers reflects a broader trend away from standalone server systems, necessitating higher configuration servers that can be subdivided into virtual machines (VMs) tailored to specific needs. This flexibility allows for scalable resource allocation and longevity of use compared to traditional standalone setups.

557. In the Petitioner's case, the current RFID server in the Tata Power Data Center faces significant challenges as it runs on unsupported Windows Server 2008, lacks backup and utilizes outdated hardware. In this regard, a copy of the CISCO's Obsolescence Notice of existing CISCO network switches is annexed herewith and marked as **ANNEXURE P/51.**

558. Adopting virtual servers eliminates procurement delays and financial hurdles associated with acquiring new servers, firewall license and security measures. It expedites IT project implementation, ensuring timely access to computing resources and swift deployment of applications critical to plant operations and business functions. Delaying or not implementing this migration project risks disrupting operational efficiency, hindering laptop distribution as per policy, necessitating repetitive procurement processes and impeding timely application functionality and report generation.

559. Pertinently, embracing virtualization not only mitigates technological obsolescence but also enhances security features and operational agility across the Petitioner's generating station infrastructure as required under the

aforementioned CEA Guidelines 2021 quoted above in IT Infrastructure.

560. Accordingly, the Petitioner humbly requests the Hon'ble Commission to allow the above additional capital expenditure of Rs. 460 lakh for the period 2024-29 under Regulation 25(2)(b) and 25(2)(c) of the Tariff Regulations 2024.

xxxv. Installation of Security Operation Center (SOC) for all PLC

561. It is submitted that recently, there has been an upsurge in the Cyber-attacks / intrusion attempts on the critical infrastructure sector such as the power sector wherein the attackers have become more sophisticated and organized, employing advanced techniques such as ransomware and supply chain attacks. The traditional "air gap" between Information Technology (IT) and Operational Technology (OT) systems is no longer effective in protecting power systems against cyber threats, the need of the hour is to deploy the latest technology to safeguard the Plant from any cyber security breach.

562. This brings our attention to the Programmable Logic Control (PLC) which is essential to avail 24x7 power generation. At the generating station, PLCs are being used for the Control & Operation of BOP area plants like CHP, AHP, DMP, RWPH, MRS, Fire Water plant, Stacker/Reclaimer, Paddle feeders etc. Each of the PLC system consists of two redundant controllers with number of Input/Output control modules and various networking instruments. BOP area all processes along with critical closed loops are being measured and controlled by each PLC system. Hence, it is pertinent to safeguard the PLC from any kind of failure & mainly from cyber-attacks. The PLC system consists of the following:

(a) Measurement & Control System: The function of measurement & Control System is to display the measured process parameter at the Workstation and also to perform control functions. This system comprises of

Processors, Signal Conditioning & Monitoring cards and function cards.

(b) Data bus system: Data bus system comprises Control bus, communication controller to transfer the data between Measurement function cards and the Operator Workstation system.

(c) Operator cum Engineer Workstations: The functions of the OWS cum EWS system are to convert the data to various types of displays on the monitor and communication of commands from the Monitor/ Keyboard to the final control element. It can also perform the function of logic generation in addition to functions of Operator workstations.

(d) Sequence of event recording & Annunciation System- Perform the functions of recording the Sequence of events as well as notifying the event through Annunciator.

(e) Software- Comprises of System & Application software to carry out Engineering, Monitoring and Operation, Maintenance functions and Management Information system. The complete software for Microprocessor based control systems also includes Communication software between systems.

563. Power sector specific Cyber Security Regulations may be traced back to the CERC (Communication System for Inter-State Transmission of Electricity) Regulations, 2017 wherein under Regulation 7.1 it had specified Central Electricity Authority (CEA) to formulate the guidelines for cyber security. However, it was in 2021 and under Section 3(10) in the Central Electricity Authority (Technical Standards for Connectivity to the Grid) (Amendment) Regulations, 2019; CEA issued Central Electricity Authority (Cyber Security in Power Sector) Guidelines, 2021 wherein all power sector utilities are mandated to follow the Guidelines to ensure cyber

security in the power sector.

564. Furthermore, the importance of cyber security was also duly considered under the Central Electricity Regulatory Commission (Indian Electricity Grid Code) Regulations, 2023 dated 29.05.2023; the joint reading of Regulation 7 and Regulation 51 of IEGC Regulations, 2023 explicitly mandates that all users shall comply with the applicable Regulations such as the Central Electricity Authority (Cyber Security in Power Sector) Guidelines, 2021(CEA Guidelines, 2021) dated 07.10.2021 [***Refer: Annexure P/17***]. The relevant Regulation is produced below for the ready reference -

> *"7. Compliance with Existing Rules and Regulations (1) All Users connected to or seeking connection to the grid shall comply with all the applicable regulations as enacted or amended from time to time, such as:*
> *....*
> *(k) Central Electricity Authority (Cyber Security in Power Sector) Guidelines, 2021."*
> *...*
> *"51. Cyber Security Audit All users, NLDC, RLDCs, SLDCs, CTU and STUs, power exchanges, QCAs, SNAs, shall conduct Cyber Security Audit as per the guidelines mentioned in the CEA (Cyber Security in Power Sector) Guidelines, 2021 and any other guidelines issued by an appropriate Authority."*

565. Since the CEA guidelines, 2021 are binding on the Petitioner as a legal mandate to ensure that its IT technologies in the Power System Equipment/System have the ability to be upgraded. The relevant regulation is presented below for reference -

> *"Article 7 Phasing out of Legacy System a) As the life cycle of the Power System Equipment/System is longer than that of IT Systems deployed therein, the Responsible Entity shall ensure that all IT technologies in the Power System Equipment/System should have the ability to be upgraded."*

566. Therefore, to prevent a primary attack on the PLC system, it should be equipped with the latest technology like SOC (Security Operation Centre), SEIM, Threat Detection & Prevention System etc. Furthermore, Article 14 of CEA Guideline 2021, mandates that every Power generating station should go through a CERT-In

Empanelled Cyber Security OT Auditor for IT/OT Systems audited at least once in every 6 (six) months. The relevant regulation is presented below for reference -

> *"Article 14 Cyber Security Audit*
> *a) The Responsible Entity shall implement Information Security Management System (ISMS) covering all its Critical Systems.*
> *b) The Responsible Entity shall through a CERT-In Empanelled Cyber Security OT Auditor shall get their IT as well as OT System audited at least once in every 6 (six) months and shall close all critical and high vulnerabilities within a period of one month and medium as well as low non-conformity before the next audit. Effective closure of all non-conformities shall be verified during the next audit.*
> *c) The Cyber Security Audit shall be as per ISO/IEC 27001 along with sector specific standard ISO/IEC 27019, IS 16335 and other guidelines issued by appropriate Authority if any. These mentioned standards shall be current with all amendments if any and in case if any standard is superseded, the new standard shall be applicable. CISO shall ensure immediate closure of non-conformance, based on the criticality and by means all non-conformances are to be closed before the next audit.*
> *d) The Responsible Entity shall ensure that CISO has all the required systems and documents in place, as mandated by NSCS for base line cyber security audit."*

567. It was also advised by CERT-In, in the Audit Report dated 24.01.2023 and 01.08.2023 for Unit 1 and 2 respectively, to conduct cyber security audit of entire Cyber infrastructure including IT/OT system at regular interval through CERT-In empanelled Auditors to identify gaps and appropriate corrective actions to be taken in cyber security practices and the Security Operation Centre (SOC) which will provide necessary analysis and evidence to support the audit. The relevant extract of the aforesaid audit report is reproduced below for ready reference:

> *" Recommendations*
> - *All unwanted ports & services running on the systems should be disabled. During this process, it is always good to check the effect on running SCADA system performance (with the help of SCADA vendor). System availability is more important in OT environment.*
> - *Unused ports of network/OT devices such as switch should be disabled.*
> - *Device control and application control policy for OT environment*

should be implemented.

- *Upgradation of Network Device Firmware should be carmed out are regular intervals and should be implemented*
- *Upgradation of system OS should be conducted, and the systems should be on latest OS. be on latest Firmware.*
- *Antivirus definitions and OS patch update rule should be defined and implemented .*
- ***Monitor and implement security controls for the communication involving DCS systems (System PC and PLC) which are having the data flow between DCS systems and third-party sources/ devices for security checks (with the support of vendor). This will add another layer of security in third party communication involving TCP/IP, OPC, Modbus, etc between DCS systems and third-party sources/devices"***

[***Emphasis supplied***]

A copy of the CEA Guideline 2021 (relevant pages) along with Grant Thornton's Audit Report dated 24.02.2023 are annexed herewith and marked as **ANNEXURE P/52**.

568. Considering above important and legal mandatory requirements, the Petitioner has already communicated with M/s Allen Bradly and GE Fanuc, the OEM to implement SOC in PLC system that includes all existing BOP area like CHP, AHP, DMP, RWPH, MRS, Fire Water plant, Stacker/Reclaimer, Paddle feeders etc. The Key benefit of implementing SOC in PLC systems is that the Integration with IT Security will be possible safeguarding from any cyber security breach and ensure compliance with the aforementioned Regulatory Requirements.

569. Thus, the Hon'ble Commission may allow the aforesaid proposed additional capital expenditure of Rs. 200 Lakh for FY 2025-26 and Rs. 200 Lakh for FY 2026-27 for the implementation of SOC in the PLC system under Regulation 25(2)(b) of the Tariff Regulations 2024.

xxxvi. Upgradation of MAX DNA DCS Hardware System

570. It is submitted that the Distributed Control System (DCS) system is the Heart of the Plant as operation, monitoring and control of the system is achieved with the

help of the DCS system and any abnormality or malfunction in the system may adversely affect the Generation schedule. Hence, the availability of a modern and upgraded DCS system is very important for the smooth & normal operation of the Petitioner's generating station to meet its desired generation schedule for the beneficiaries and avoid any discomfort to the end consumers.

571. Notably, Unit-1 and Unit-2 have been commissioned and declared COD in September 2011 and July 2012 respectively making DCS almost 15 years old. As per the OEM recommendation, DCS hardware like DPUs, I/O modules and other associated control modules are prone to failure after 15 years of age. At this juncture, the Petitioner is faced with the following two restrictions vis-à-vis its ageing DCS hardware:

(a) The first restriction which is usage life and obsoleteness of the hardware of DCS making the cost of repair very expensive and exhaustive. Till now Petitioner has managed the old system, with the existing inventories and the support extended by BHEL.

However, now, BHEL has expressed its inability to provide further support and has recommended for complete up-gradation of existing DCS hardware to the higher version with the upgraded version of MAX DNA DCS to ensure services and necessary spares.

(b) The second restriction is with respect to the adherence to new Cyber security requirements under CEA (Cyber Security in Power Sector) Guidelines 2021. The malicious Cyber intrusion attempts and Cyber-attacks in any critical sector lead to compromise with the Power security in the country, leading to mal-operations of equipment, equipment damages or even in a cascading grid brownout/blackout and such risk of

cyber-attacks is mainly on OT system like DCS, PLC or IT/OT integration network and to reduce such risk CEA has mandated every power generating entity to place various cyber risk mitigating technologies.

Therefore, again to adhere to new cyber security requirements DCS system should be modern and updated with all aspects like both hardware & software part. Even OEM has confirmed that the hardware has to be upgraded with a higher version to mitigate cyber threats. A copy of the OEM letter dated 23.05.2022 on obsolescence of software is annexed hereto and marked as **ANNEXURE P/53 A.** A copy of Email Communication dated 01.03.2024 for obsolescence of Hardware is annexed hereto and marked as **ANNEXURE P/53 B.**

572. At this juncture, it is relevant to note that Regulation 7 and Regulation 51 of IEGC Regulations, 2023 explicitly mandate that all users shall comply with the applicable Regulations such as the Central Electricity Authority (Cyber Security in Power Sector) Guidelines, 2021(CEA guidelines, 2021) dated 07.10.2021 [***Refer: Annexure P/17***]. The relevant Regulation is produced below for the ready reference -

> *"7. Compliance with Existing Rules and Regulations (1) All Users connected to or seeking connection to the grid shall comply with all the applicable regulations as enacted or amended from time to time, such as:*
> ....
> *(k) Central Electricity Authority (Cyber Security in Power Sector) Guidelines, 2021."*
> ...
> *"51. Cyber Security Audit All users, NLDC, RLDCs, SLDCs, CTU and STUs, power exchanges, QCAs, SNAs, shall conduct Cyber Security Audit as per the guidelines mentioned in the CEA (Cyber Security in Power Sector) Guidelines, 2021 and any other guidelines issued by an appropriate Authority."*

573. Further, since the CEA guidelines, 2021 are binding on the Petitioner as a legal

mandate to ensure that its IT technologies in the Power System Equipment/System have the ability to be upgraded and legacy system should be phased out. The relevant regulation is presented below for reference -

> *"Article 7 Phasing out of Legacy System a) As the life cycle of the Power System Equipment/System is longer than that of IT Systems deployed therein, the Responsible Entity shall ensure that all IT technologies in the Power System Equipment/System should have the ability to be upgraded.*
> *b) The Responsible Entity shall ensure that the Information Security Division shall draw the list of all communicable equipments/systems nearing end life or are left without support from OEM. Thereafter CISO shall identify equipment/systems to be phased out from the list drawn, firm up the replacement plan and put up the replacement plan for approval before the Board of Directors"*

574. In this context, in order to overcome the aforementioned restrictions and improve the DCS reliability by mitigating the risk of non-availability of services and spares and cyber security threats, it is proposed to Upgrade the MAX DNA DCS Hardware System. Therefore, according to the recommendation of OEM M/s BHEL and the substantial risk of continuing with the ageing DCS system, it proposed to upgrade DCS system hardware like DPU, I/O module, Communication module, and Power supply module to a higher version. For Unit 1 the execution is planned in the ensuing Annual Shutdown Plan in FY 2027-28 and for Unit-2 is planned in FY 2028-29 with the estimated project cost at Rs. 2000 Lakh.

575. In view thereof, the Hon'ble Commission may allow the above proposed additional capital expenditure of Rs. 1000 Lakh for FY 2027-28 (for Unit 1) and Rs. 1000 Lakh for FY 2028-29 (for Unit 2) under Regulation 25(2)(a) and 25(2)(c) of the Tariff Regulations 2024.

xxxvii. Upgradation of Real time Vibration Analysis System

576. It is submitted that at the Petitioner's generating station, Boiler, Turbine control & operation are being handled by numbers of big machines, rotating drives like

High-speed Steam turbine, Steam turbine driven boiler feed pumps, Coal Mills, PA, FD, ID fan, Pumps like CW, ACW, DMCW, CEP, CHP etc. The combination of all machines generates 24 hrs xx365 days of continuous power to the grid to meet electricity demand. Hence, availability of those load bearing machines is very important and plays a very crucial role in power generation.

577. Vibration monitoring is a crucial part of any machine's operating and maintenance program as it helps in monitoring and maintaining their health, ensuring optimal performance and preventing potential failures by providing insights into their condition and ultimately contributing to improved reliability, safety and cost-effectiveness in industrial operations.

578. Further, vibration analysis offers a plethora of advantages, such as it aids in detecting early signs of mechanical issues or abnormalities in machinery and safety of both the equipment and personnel due to early warning detection, reducing the risk of unexpected breakdowns and lastly, it helps in enhancing safety as Vibration analysis helps in identifying and rectifying issues before any mishap. Hence, the importance of the Vibration system is undisputable.

579. However, there is a need for upgradation of the present Vibration Monitoring System (VMS) due to four primary reasons:

(a) At present the existing vibration analysis system (supplied by Forbes Marshall) is Windows XP-based system and has reached its end of life. Each unit is provided with two servers (Windows XP based HP server) for analysis purposes, one client and one monitoring purpose. But for the last five years the Petitioner was unable to utilize the analysis system due to lag in software and issues in data fetching from VMS panel due to frequent failures of AP-10H1 servers.

(b) As per OEM, existing RV-100 series software and AP-10 analyzer both have become obsolete and no service is available from OEM.

(c) In addition to it, in the existing scheme, key phasor raw signal for all HT drives is being fetched to AP10H1 processor for analysis application. As AP10 analyzer is in stage of end of life and not working, no HT drives speed signal is available for vibration analysis and the analysis vibration pattern of critical load bearing HT drives on real time basis is not possible. Copies of the End of Sale Announcement/ Discontinuation/ Obsolescence documents of AP-10 and RV-100 services hardware/software are annexed herewith and marked as **ANNEXURE P/54 (COLLY.)**.

(d) Further, both Unit TDBFP turbine VMS package (Axial shift, vibration and expansion signals) is not included in the existing vibration analysis system and, therefore, vibration related analysis is not possible for critical pumps like both Unit TDBFPs.

(e) And lastly, as both the hardware AP10 module and software RV100 are out of usage life, no vibration analysis is possible for the main turbine as well as all HT drives and critical load bearing equipment across the BTG area.

580. In order to utilize the VMS optimally, M/s Forbes Marshall Pvt. Ltd. (OEM) was contacted for suitable solution for the upgradation of vibration analysis system with higher version software & hardware and the upgradation project. Pertinently, OEM will support in complete installation and configuration of new vibration analysis system, compatible with existing vibration measurement system in both Units, which will include upgradation works of the server system to latest version Windows 11 OS and renewing the analysis software tools license compatible to the upgraded OS. Both Unit 1&2 Main Turbine TSI all dynamic

vibrations & axial/expansion signals hookup with latest version RV200 series software. Both Unit 1 and 2 TDBFP all dynamic vibrations & axial/expansion signals hookup with RV200 series software. Upgradation includes configuration of Key-phasor (Speed) signal of all HT drives individually through rpm card in VMS rack and then feeding it to vibration analysis processor, Upgradation of AP-10 analyzer with latest version analyzer hardware compatible with RV200 series software and latest version Windows 11 OS. All associated modules like Sampling card, Trigger card, Modbus modules to be upgraded with AP-10 upgradation and the procurement of new software/hardware license warranty, for making it compatible with Windows-11 platform.

581. The upside of the upgradation of the VMS will be the prevention of Costly Downtime, ensuring timely repairs, if need be, ensuring that machines are running longer and more efficiently and since the repairs are timely there is less likelihood to shut down the equipment because of extensive damage allowing the Petitioner to act proactively to avoid major production failures and reduce the cost of repair.

582. Hence, the upgradation of the VMS being technical mandatory requirement is essential for the improved availability of the plant equipment, which in turn ensures generation requirement as per the schedule. The Petitioner invokes Regulation 25(2)(a) & 25(2)(c) to support its Additional Capitalization expenditure and requests Hon'ble Commission to allow the proposed capitalization of Rs. 250 Lakh for FY 2025-26 and Rs. 250 Lakh for FY 2026-27.

xxxviii. Upgradation of MRS and ZLD PLC

583. It is submitted that the PLC system consists of Measurement & Control system (CLCS & OLCS), Data bus system, Operator Workstations, Engineer Workstation, Software including data diagnostics and data bus system with Control and

Communication with the process. All operation, monitoring and control automation is achieved with the help of this PLC system. Petitioner states that the PLC system was installed and implemented on GE Fanuc platform supplied by M/s Macawber Beekay. This system is implemented on Genius Bus Controllers which has been declared as obsolete by OEM, and hence, need to be upgraded to latest Profinet technology.

584. Petitioner also states that existing human machine interface (HMI) Software 'FT View' installed in Zero Liquid Discharge (ZLD) Plant area are obsolete owing to the obsolesces of 32-bit Windows 7 OS and needs to be upgraded to the latest & compatible Windows 11 Prof OS. Therefore, OEM has recommended to upgrade the Engineering work station and Operator work station terminal of zero liquid discharge plant. Copies of the Obsolescence Letter dated 12.05.2021 and obsolescence letter dated 01.01.2024 issued by the respective OEM is annexed hereto and marked as **ANNEXURE P/55 (COLLY.)**.

585. The estimated total cost for the software upgradation is Rs. 150 Lakh, proposed to be capitalized as Rs. 75 Lakh in FY 2025–26 and Rs. 75 Lakh in FY 2026–27. Accordingly, the Hon'ble Commission may be pleased to allow the additional capital expenditure for the proposed upgradation of PLC software under Regulations 25(2)(a) and 25(2)(c) of the Tariff Regulations 2024.

xxxix. Replacement of H2 Plant Electrolysis Module

586. It is submitted that the generating station of the Petitioner has installed Hydrogen (H2) generation plant of capacity 2 X 200 SLM (Standard Liter per minute). Each H2 Generating Plant has 2 nos. of electrolysis modules. Therefore, there are a total of 4 nos. of electrolysis modules. This electrolysis module is the main component that generates pure hydrogen gas at 99.99 % purity. This hydrogen gas is used for

the cooling of the Exciter (Dynamo) during electricity generation.

587. At present, 3 nos. of the Electrolysis Modules out of 4 have completely deteriorated and are beyond repair. The Electrolysis Modules have been in service for approximately 12 years, which is significantly more than its recommended service life of 7 to 8 years (as mentioned by OEM in their letter dated 15.04.2024) with frequent repairs in recent past. Currently, the operation is being run with highly deteriorated performance which may fail any time. Now, the OEM *vide* its letter dated 15.04.2024 has informed that these modules are beyond repair and has advised their replacement. A copy of the OEM Letter dated 15.04.2024 is annexed hereto and marked as **ANNEXURE P/56**.

588. In view thereof, it is requested that the Hon'ble Commission may allow proposed additional capital expenditure of Rs. 300.00 lakh in FY 2024-25 and Rs. 300 lakh in FY 2025-26 under Regulation 25(2)(a) of Tariff Regulations 2024.

xl. Ceramic Lining of Coal Mill

589. It is submitted that the Petitioner had undertaken the project of ceramic lining of the Coal Mill during the last control period, with the balance work scheduled for completion in the FY 2024-25.

590. It is a matter of fact that the coal received at the Petitioner's plant contains higher ash content than stipulated in the Fuel Supply Agreement (FSA). The elevated ash content, coupled with the presence of high-abrasive mineral species, has significantly increased the erosion propensity of the coal mill internals and piping.

591. To complete the balance work undertaken, estimated expenditure is Rs. 180 lakh for FY 2024-25.

592. In light of the above, the Petitioner respectfully prays to the Hon'ble Commission to approve additional expenditure of Rs. 180.04 lakh for FY 2024-25 for the

ceramic lining of the Coal Mill under Regulation 25(2)(a) and 25 (2)(b) of the Tariff Regulations 2024.

xli. Upgradation of Main Turbine and TDBFP Electro-hydraulic governing system components

593. It is humbly submitted that at Petitioner's generating station, main turbine and TDBFP turbine control system is governed by electro-hydraulic system for controlling the speed and output of turbines. This electro-hydraulic system comprises of many critical components like proportional valves, solenoid valves and hydraulic operated devices to ensure safe operation of equipment. This governing system is, thus, responsible for control of the Prime mover by means of opening and closing of control valves and stop valves during start-up, normal and emergency operation. Other than carrying out the major governing activity, its basic functions include acting as man-machine interface for the operation of the turbine, control start-up and synchronization of the machine, control turbine load when running in parallel with generating set etc.

594. Keeping in view the aforementioned functions, the governing system is a critical component for the plant as it enables the plant to efficiently manage load fluctuations and ensure that system stability is maintained.

595. Further, critical control circuits, such as Emergency Stop Valve (ESV) reset and operation, Automatic Turbine Trip (ATT) system and protection circuits, utilize solenoid operation and electro-hydraulic controllers with proportional valves to operate control valves. Ensuring the availability of these Solenoid-Operated Valves (SOVs) is crucial for equipment protection, as their failure can impact safety and lead to generation loss. The currently installed SOVs, including those manufactured by Heroin and Norgren (OEM) were supplied by BHEL during the

early phases of construction. Since the plant has been under operation since 2012 while also considering that these SOVs are integral for turbine protection trip circuits and Cold Reheater (CRH) Line non return valve (NRV) Operations, most of these SOVs have been in service for over 12 years, exceeding the OEM's recommended service life of five years and are proposed to be replaced. A copy of the Heroin and Norgren (OEM) Recommendation dated 10.08.2022 is annexed herewith and marked as **ANNEXURE P/57**.

596. In view of the above, the Petitioner requests the Hon'ble Commission to allow the projected additional capital expenditure of Rs. 200.00 lakh in FY 2025-26 and Rs. 200.00 lakh in FY 2026-27 under Regulation 25(2)(a) and 25(2)(c) of the Tariff Regulations 2024

xlii. Replacement of Fire Tenders

597. It is submitted that this scheme is also continuation of the scheme proposed under the 2019-24 tariff period scheme. The Petitioner has made appropriate submissions in true-up section of the present Petition which are not being repeated herein for the sake of brevity.

598. The Petitioner humbly submits that the existing two fire tenders have reached the end of their 15-year service life and need to be deregistered. However, according to the Government Notifications & Directives, vehicles with emissions ratings below BS 4 are not eligible for re-registration. [***Refer: Annexure P/28***] As a result, new vehicles were required to be procured. Given the crucial role fire tenders play in thermal power stations this expenditure is necessary.

599. Therefore, in order to maintain the fire safety standards, two new fire tenders (Multipurpose and Water Tenders) were ordered to meet the requirements one of the two fire tenders was delivered in FY 2023-24 and other in FY 2024-25.

Accordingly, the Petitioner request the Hon'ble Commission to allow the additional capital expenditure of Rs. 109.40 lakh towards the said work in FY 2024-25 under Regulation 25(1)(b) and 25(2)(a) of the Tariff Regulations 2024.

xliii. Replacement of pneumatic actuator and control mechanism

600. It is submitted that a pneumatic actuator and control mechanism work together in plant applications to control the movement of various mechanical components, such as valves, dampers and other process equipment.

601. The pneumatic actuator and control mechanism work collaboratively to enable the precise and automated control of industrial processes. The actuator translates compressed air energy into mechanical motion, while the control mechanism manages the airflow and positions the actuator to achieve the desired control outcomes.

602. Due to ageing and the deteriorated condition of actuators and control mechanism, the instances of failure have increased and they shall be de-commissioned and replaced/upgraded phase wise one by one. The upgraded actuators and control mechanism shall be procured from respective vendors.

603. The Project shall be executed by the Petitioner wherein above upgraded actuators and control mechanism shall be procured followed by the replacement of existing actuators and control mechanism. The estimated project cost is Rs. 400 Lakh.

604. In view of the above, the Petitioner proposes to incur an additional capital expenditure of Rs. 200 lakh in FY 2026-27 and Rs. 200 lakh in FY 2027-28 and, accordingly, requests the Hon'ble Commission to allow the same under Regulation 25(2)(a) and 25(2)(c) of the Tariff Regulations 2024.

xliv. Refurbishment of Economizer Coil

605. It is submitted that the economizer, along with the air preheater, enhances boiler

efficiency by approximately 20%. However, due to the characteristics of coal and the high ash content in Petitioner's generating station, the economizer is prone to leakage. Additionally, the economizer tubes have thinner walls compared to other boiler tubes. The increased velocity of flue gases, caused by the reduced flow path, exacerbates erosion in the economizer.

606. The economizer in the 2nd pass of the boiler comprises 198 coils arranged in an inline configuration, arranged into the Top Bank and Bottom Bank. The Top Bank contains 33 rows of tubes, each measuring 13,716 mm in length, while the Bottom Bank consists of 30 rows of tubes of the same length. Access is available to the top and bottom rows of each coil; however, the areas between the economizer coils are inaccessible for testing and are equally susceptible to erosion.

607. Due to the complex design, position and mounting of the economizer tube banks, damage occurring between the Top and Bottom Banks cannot be repaired in situ. This necessitates the complete replacement of the affected tube bank. Furthermore, during annual overhauls, it is not feasible to inspect and measure the thickness of all tubes due to the design limitations.

608. As has been explained in True up section, the failure history of economizer tubes is concerning, as the Petitioner has reported 21 forced outages since the commissioning of both units. When tube leakage occurs in this zone, repairs can take between 36 to 116 hours, depending on the location and severity of the damage. During this period, the Unit remains shut down, leading to a loss of generation ranging from 18 MU to 61 MU per year. This was mainly due to poor coal quality and high ash content in coal. The OEM, BHEL has also, in MoM dated 13-14th June 2018, attributed these failure to coal properties having high ash content. The Petitioner craves leave of this Hon'ble Commission to rely on the

submissions made in the true-up section which are not repeated herein for the sake of brevity.

609. While BHEL has advised replacement of Economizer sections in next 4 years, based on afore-mentioned condition, it is noteworthy that the same was initiated in 2019-24 and its refurbishment pending replacement and subsequent replacement will continue in 2024-29. Thorough inspections are critical to preventing failures, but in situ inspections are hindered by the minimal gap between economizer coils. Creating additional space for inspection is not feasible and lowering the coils for inspection requires cutting all coils and connection tubes linked to the inlet and outlet headers.

610. During a typical 30-day overhaul, only about 30 coils can be inspected, leaving the majority unexamined and compromising system reliability. To address these challenges, the removal of economizer coils to ground level for inspection and repair has proven to be an effective method. This involves dismantling all top and bottom hangers from the economizer during the annual overhaul, bringing them to ground level for inspection and repair for which Economiser Platform has been proposed earlier.

611. The Petitioner maintains a spare set of economizer top and bottom coils, which are installed in place of the old ones after repair. Based on past experience, inspecting and repairing old economizer coils takes approximately six months, with high costs for both materials and services. With a set of pre-repaired economizer hangers, overhauling time can be reduced, enabling the replacement of 100% of the economizer coils within 25 to 28 days of the annual shutdown. The old coils are then refurbished and prepared for the next overhaul cycle.

In view of the current scenario, the Petitioner, through this instant Petition,

humbly seeks approval for the refurbishment of economizer coils to enhance the reliability of the plant.

612. The estimated total project cost for the refurbishment and replacement of economizer coils is Rs. 3000 Lakh, proposed to be capitalized as Rs. 600 Lakh each in FY 2024–25, FY 2025–26, FY 2026–27, FY 2027–28 and FY 2028–29. Accordingly, the Hon'ble Commission may be pleased to allow the expenditure in terms of Regulation 25(2)(a), 25(2)(b) and 26(1)(i) of the Tariff Regulations 2024.

xlv. ESP Internals

613. It is submitted that the need for replacement of ESP internals has been elaborated in the True-Up scheme for 2019-24, and the Petitioner craves leave of this Hon'ble Commission to rely on the submissions made in the true-up section which are not repeated herein for the sake of brevity.

614. It is highlighted that some part of the work has been done in 2019-24 and balance is proposed to be done during 2024-29. Therefore, Petitioner seeks Hon'ble Commission's approval for replacement of balance Electrostatic precipitator internals to improve reliability of plant under Regulation 25(1)(b) and 25(2)(a) of Tariff Regulations 2024.

615. The estimated total project cost is Rs. 1503.64 Lakh, which is proposed to be capitalized Rs. 393.64 Lakh in 2024-25, Rs. 510 Lakh in FY 2025-26, Rs. 300 Lakh in FY 2026-27 and Rs. 300 Lakh in 2027-28.

xlvi. RAPH I/L and O/L dampers

616. It is submitted that the Regenerator Air Pre- heater (RAPH) I/L (Inlet) and O/L (Outlet) dampers are crucial components located in the flue gas exit path above and below the RAPH (Regenerative Air Preheater). These dampers manage the flow of flue gas, which contains abrasive ash particles due to coal combustion in

the boiler's first pass. The quality of coal used has high ash content from 40-44% (as against 36% design value). This change requires burning more coal to achieve the necessary heat generation, resulting in higher quantities of flue gas and ash passing through the dampers.

617. The increased ash content compared to the original design value has led to significant erosion of the flue gas dampers. Repairing these dampers in situ during short maintenance overhauls is ineffective, costly and time-consuming, often requiring replacement rather than repair due to severe erosion. This effectively is due to high ash content in coal, the quality of which is beyond the control of Petitioner and qualifies as force majeure reason.

618. During any forced shutdown of one RAPH, it is critical to isolate it completely from the gas side to protect its rotor from temperature variations across different sectors (flue gas, primary air, secondary air). Failure to isolate a static RAPH from the flue gas system can lead to permanent rotor damage, resulting in extended outages and substantial generation losses.

619. Effective isolation of a malfunctioning RAPH using the flue gas dampers prevents the need for a complete Unit shutdown. This capability ensures that maintenance or repairs can be performed on one RAPH without affecting the entire Unit's operation, thereby enhancing overall Unit reliability. By avoiding complete Unit shutdowns, the approach reduces costs associated with generation losses and startup procedures following forced shutdowns.

620. The estimated cost of the project is Rs. 450 lakh with capitalization of Rs. 200 lakh in FY 2024-25 and Rs. 250 lakh in FY 2025-26. Accordingly, the Petitioner humbly requests the Hon'ble Commission to allow the above additional capital expenditure under Regulation 25(2)(b) and 26(1)(i) of the Tariff Regulations,

2024.

xlvii. Max DNA DCS Upgradation with Cyber Security SOC

621. The Petitioner's power plant is equipped with a Max DNA Distributed Control System (DCS) provided by OEM BHEL, which plays a critical role in the operation, monitoring, and control of the power plant. The DCS system, which consists of Measurement & Control System (CLCS & OLCS), Data Bus System, Operator Workstations, Engineer Workstations, Sequence of Event Recording and Annunciation System, is essential for ensuring the smooth operation of generating units, meeting generation schedules and avoiding disruptions for consumers.

622. Initially, the Max DNA DCS system was operated on Microsoft Windows XP platform. However, since 2014, Microsoft declared Windows XP obsolete and ceased providing support, including security updates. To mitigate risks, the DCS system was upgraded to Windows 7. Unfortunately, Microsoft ended support for Windows 7 also, leaving the system vulnerable to security threats due to the unavailability of updates, security patches and technical support.

623. The current HMI systems, based on Windows XP and 7, have reached the end of their service life, leading to slow performance and frequent system failures. Additionally, due to component obsolescence, spare parts and support are no longer available, posing a significant risk to the uninterrupted operation of the plant. New workstations, equipped with the latest Windows Operating System, are not compatible with the old systems, making replacement difficult in case of hardware failure. A copy of Recommendation Letter for obsolescence and upgradation of HMI-Max Stations dated 23.05.2022 is annexed herewith and marked as **ANNEXURE P/58A**.

624. The CEA's 2021 Cybersecurity Guidelines mandate that all obsolete or un-

serviceable communicable intelligent devices be phased out and replacement plans be approved by the Board of Directors. The absence of support for Windows 7 makes the DCS system vulnerable to cyber threats, compromising the safety and security of critical operational technology (OT) systems. The implementation of a Security Operations Centre (SOC) for continuous monitoring of the OT system is essential to safeguard against cyber risks and ensure operational safety.

625. At this juncture, it is relevant to note that Regulation 7 and Regulation 51 of IEGC Regulations, 2023 explicitly mandate that all users shall comply with the applicable Regulations such as the Central Electricity Authority (Cyber Security in Power Sector) Guidelines, 2021(CEA Guidelines, 2021) dated 07.10.2021 [Refer: **Annexure P/17**]. The relevant Regulation is produced below for the ready reference -

> *"7. Compliance with Existing Rules and Regulations (1) All Users connected to or seeking connection to the grid shall comply with all the applicable regulations as enacted or amended from time to time, such as:*
> ....
> *(k) Central Electricity Authority (Cyber Security in Power Sector) Guidelines, 2021."*
> ...
> *"51. Cyber Security Audit All users, NLDC, RLDCs, SLDCs, CTU and STUs, power exchanges, QCAs, SNAs, shall conduct Cyber Security Audit as per the guidelines mentioned in the CEA (Cyber Security in Power Sector) Guidelines, 2021 and any other guidelines issued by an appropriate Authority."*

626. Further, since the CEA Guidelines, 2021 are binding on the Petitioner as a legal mandate to ensure that its IT technologies in the Power System Equipment/System have the ability to be upgraded and legacy system should be phased out. The relevant regulation is presented below for reference -

> *"Article 7 Phasing out of Legacy System a) As the life cycle of the Power System Equipment/System is longer than that of IT Systems deployed therein, the Responsible Entity shall ensure that all IT technologies in the Power System Equipment/System should have the ability to be upgraded.*
> *b) The Responsible Entity shall ensure that the Information Security*

Division shall draw the list of all communicable equipment/systems nearing end life or are left without support from OEM. Thereafter CISO shall identify equipment/systems to be phased out from the list drawn, firm up the replacement plan and put up the replacement plan for approval before the Board of Directors"

627. Pursuant to aforesaid, the Petitioner also conducted Operational Technology assessment by CERT-In empanelled Auditors. Based on the Impact, risk rating and recommendations highlighted, the Petitioner has proposed a capital expenditure scheme for the upgradation of the DCS system, which will improve system reliability and mitigate the risks posed by outdated software.

Report recommendation is as follows:

"

i. *It is recommended to regularly update your operating system to avoid these issues and ensures optimal performance and security of the device. Immediate upgrade of OS is required since current control system are running on obsolete OS.*

ii. *It is strongly recommended to upgrade the OS of DCS workstation/servers so that Antivirus support is available in the form latest AV definitions It is also recommended to have a centralized AV manager so that AV definition can be updated regularly from it.*

iii. *Create a policy and Procedure inline to the OEM that OEM has to provide the validate patches as per patch management life cycle for OEM managed critical system/devices.*
Patch manager needs to be integrated with DCS network so that workstations/server can be updated from centralized location and can be mapped with the OS update cycle. It is strongly recommended that you regularly install windows patches and updates to ensure the device is protected from security threats, runs smoothly, and remains compatible with newer software and hardware."

Copy of audit report conducted for Unit 1 dated 24.01.2023 and for Unit 2 dated 01.08.2023 are attached hereto and marked as **ANNEXURE P/58 B.**

628. Given the vulnerabilities associated with the existing Windows 7-based system, and compliance of the mandate under Cybersecurity Guidelines 2021 read with IEGC Regulations, 2023, the Petitioner respectfully requests this Hon'ble

Commission for approval of 1400 lakhs in FY 2024-25 (for unit 1) and 1400 Lakhs in FY 2025-26 (for unit 2) for upgradation of the DCS system to a higher version of the Windows operating system under regulation 25(2)(b) and 25(2)(c) of tariff regulation 2024. Considering the necessity of the capital expenditure, Petitioner has placed order on L1 bidder in FY 2024-25. This upgrade will enable compliance of the mandate and ensure the continued safe and reliable operation of the power plant, mitigate cybersecurity risks and provide long-term support for the critical operational systems.

xlviii. SCADA Up-gradation

629. The upgradation of the SCADA system at Petitioner's 400 kV switchyard of the Generating Station is crucial due to the obsolescence of the current system, which lacks support for critical security updates.

630. In view of above and in order to be compliant with cybersecurity requirements, the Petitioner on 05.03.2024 made proposal to OEM with two options; Option 1 (adding extra IOs and SNMP license upgrades) and Option 2 (upgrading to a higher version with additional CPUs and upgraded software). Option 2 was initially recommended but deemed infeasible due to cybersecurity concerns and hardware/software obsolescence.

631. However, OEM further informed that the existing IT hardware and software of SCADA System do not meet the minimum requirements for the latest Micro-SCADA platform and service support for the same is no longer available. A copy of E-Mail communication dated 06.05.2022 regarding SCADA are annexed as **ANNEXURE P/59**. The relevant extracts of mail communication dated 06.05.2024 are also extracted below for ready reference -

1. The existing IT hardware (Servers, OWS/EWS) will not perform with

new Windows Server 2022/ Micro-SCADA X as it is not as per minimum hardware requirement of Micro-SCADA X platform. So, this hardware needs to be changed / replaced with new Hardware with enhanced CPU & RAM capacity.

2. *Service support for old IT hardware also not available right now.*
3. *Existing OS don't have support from OEM (Microsoft) for security patches and Windows system related updates. Hence this need to be upgraded to latest platform.*
4. *Antivirus also need to be upgraded with new platform as existing one does not have support of the latest OS.*
5. *Further, the new OS, Micro-SCADA have many updated features/benefit and complaint to new Cyber Security requirements, refer enclosed documents."*

632. As evident from the aforesaid recommendation, Upgrading to the latest Micro-SCADA platform is the only option left with the Petitioner to be compliant with the cybersecurity requirements and prevent potential operational disruptions. Needless to say, such upgradation shall safeguard against vulnerabilities, thereby supporting continuous power generation and safety of the Grid.

633. At this juncture, it is relevant to note that Regulation 7 and Regulation 51 of IEGC Regulations, 2023 explicitly mandate that all users shall comply with the applicable Regulations such as the Central Electricity Authority (Cyber Security in Power Sector) Guidelines, 2021(CEA Guidelines, 2021) dated 07.10.2021 [Refer: Annexure P/17] which as stated earlier requires dated system to be replaced. The relevant Regulation is produced below for the ready reference -

"7. Compliance with Existing Rules and Regulations (1) All Users connected to or seeking connection to the grid shall comply with all the applicable regulations as enacted or amended from time to time, such as:

....

(k) Central Electricity Authority (Cyber Security in Power Sector) Guidelines, 2021."

...

"51. Cyber Security Audit All users, NLDC, RLDCs, SLDCs, CTU and STUs, power exchanges, QCAs, SNAs, shall conduct Cyber Security Audit as per the guidelines mentioned in the CEA (Cyber Security in Power Sector) Guidelines, 2021 and any other guidelines issued by an appropriate Authority."

634. Accordingly, the Petitioner requests the Hon'ble Commission to allow the projected additional capital expenditure by the Petitioner of Rs. 100 lakh in FY 2025-26 under regulation 25(2)(b) and 25(2)(c) of Tariff Regulations 2024.

B.II.D. Additional Capital Expenditure Beyond the Original Scope of Work

i. Coal Pit Run-off Mechanized Drainage systems

635. It is submitted that the Hon'ble Commission *vide* Order dated 08.01.2022 in Petition No. 408/GT/2020 had allowed additional capital expenditure of Rs. 399.53 lakh during FY 2019-20 towards the Coal Pit Run-off Mechanised Drainage systems under Regulation 26(1)(c) of the Tariff Regulations 2019. However, as explained in True- up section for 2019-24, the scheme could not be executed due to local agitation. In this respect, it is noteworthy that that the Petitioner has already spent Rs. 10.92 Lakh in FY 2019-20 and the balance scheme will be executed in FY 2026-27.

636. Accordingly, the Petitioner respectfully submits before the Hon'ble Commission that the Capital Expenditure estimated amounts to Rs. 388.61 lakh in FY 2026-27. In light of the same, the Petitioner prays that the Hon'ble Commission may kindly approve the said expenditure for FY 2026-27 in accordance with Regulation 26(1)(c) of Tariff Regulations 2024.

ii. Construction of EMD Workshop

637. It is submitted that the High Tension (HT) motors count in the Petitioner's Plant is 101 and with the addition of FGD, it will increase to 120 units. The Petitioner is facing a challenge in carrying out in-house overhauling, repair and storage of any HT Motor since no dedicated space or workshop is available. This results in unsafe working conditions, an increased maintenance period and also impacts the quality

of maintenance too.

638. Presently, ID/FD/PA fan spare motors are kept at Unit-2 ID fan area and due to the open atmosphere moisture ingress threat prevails. During Annual Overhaul (AOH), the difficulty is faced for in-house overhauling of HT Motors as both the TG unloading bays get engaged for TG related jobs and lack of adequate space for carrying out parallel overhauling is not only unsafe but also leads to huge delays with non-favorable dusty atmosphere for stator winding.

639. The availability of dedicated workshop for electrical maintenance department (EMD) would ensure adequate and safe space for working during maintenance and overhaul, which would improve the availability by reducing the time for maintenance and overhaul also. In this regard, the relevant extracts of Indian Standard (IS:7293) 'The safety code for working with construction machinery' and the Factories Act, 1948 are reproduced below:

> **IS:7293-1974**
> *"2.3 Safe Access - Safe and adequate means of access including handholds and footholds shall be provided to all parts where a person may have to walk, climb or work."*
> **Factories Act, 1948,**
> *"Section7A. General duties of the occupier.*
> *—(1) Every occupier shall ensure, so far as is reasonably practicable, the health, safety and welfare of all workers while they are at work in the factory.*
> *(2) Without prejudice to the generality of the provisions of sub-section (1), the matters to which such duty extends, shall include— (a) the provision and maintenance of plant and systems of work in the factory that are safe and without risks to health; (b) the arrangements in the factory for ensuring safety and absence of risks to health in connection with the use, handling, storage and transport of articles and substances; (c) the provisions of such information, instruction, training and supervision as are necessary to ensure the health and safety of all workers at work;* ***(d) the maintenance of all places of work in the factory in a condition that is safe and without risks to health and the provision and maintenance of such means of access to, and egress from, such places as are safe and without such risks;***
> *....."*

640. Accordingly, the Petitioner humbly requests the Hon'ble Commission to allow the additional capital expenditure of Rs. 60 Lakh in 2024-25 and Rs. 50 Lakh in 2025-

26 under Regulation 26(1)(b) and 26(1)(i) of the Tariff Regulations 2024.

iii. Stacker cum reclaimer

641. It is humbly submitted that the coal feeding system of Petitioner's Plant was originally designed with rail wagons unloading the coal directly at the track hopper of 4200 MT capacity that has 15 hoppers. To unload the coal continuously, the track hopper is required to be regularly emptied on conveyor belts. The conveyor belts take the coal to crusher and thereafter the crushed coal is either:

(a) fed to the desired bunker where the coal is temporarily stored for firing pulverised coal in boiler through coal mills; or

(b) sent to coal yard for stacking depending upon the quality and quantity of coal required for generation at that time.

The crushed coal is stacked in the coal yard with Stacker-cum-Reclaimer, which is also used for reclaiming this coal back and feeding again to the bunker for blending as per quality and quantity requirement for generation. As Rail wagons arrive in irregular intervals at times convenient to Indian Railways, which is not in sync with coal requirement for generation at that time, Stacker-cum-reclaimer plays very crucial role to stack the excess coal and feed the bunker with blended coal not only during the non-availability of coal in hopper when there is no wagon to unload or problem with track hopper but also during the non-availability of Crusher.

642. If the crushing/scoop system is under maintenance or under breakdown due to foreign material, red stone etc. reclaiming could be done through Stacker-cum-Reclaimer. Since coal stacking and reclaiming may be parallelly required with Rail transportation to meet the coal flow requirement for generation, the generating stations similar to the Petitioner have two Stacker-cum-Reclaimers, which also

ensures availability of one Stacker-cum-Reclaimer in case the other is out due to breakdown or maintenance.

643. Until March 2022 , when coal supply started from Railway Wagons, the coal was being received by trucks/Hyvas, most of which were directly being unloaded at track hopper as continuous flow of desired quality and quantity of coal to be sent to bunkers could be mostly controlled. Hence, the balance uncrushed (Run of Mine) coal was directly sent to coal yard by trucks/Hyvas.

644. Thus, Stacker-cum-Reclaimer was required to be operated only when the coal unloaded on track hopper was slightly different from desired quality and quantity. Further, with trucks/Hyvas lower length of track hopper was required for unloading and, hence, only 13 out of 15 hoppers were in use. As per normal practice, the original design had two Stacker-cum-Reclaimers.

645. However, due to peculiar case of Petitioner getting coal through trucks/Hyvas due to reasons beyond the control of the Petitioner that were duly acknowledged by Hon'ble Commission in Order dated 08.01.2022 also, the usage of Stacker-cum-Reclaimer was very low and, therefore, only one Stacker-cum-Reclaimer supplied by M/s Elecon was commissioned and is in operation presently for last 12 years.

646. However, upon commencement of Railway Wagons from March 2022, the coal supply is gradually shifting from Road to Rail mode. This in turn has led to following challenges: -

(a) As per the FSA with Coal Companies (CCL and BCCL), the supply of coal could be made from either from Rail or Road or Rail-cum-Road mode at the discretion of Coal Companies depending distance of or availability of Rail head at the coal mines allotted to the Petitioner (more than 40 in number). Coal supply from shorter distance mines is invariably through Road mode.

Even for mines having Rail head, the availability of rakes affects the mode of transport.

(b) Shortage of rakes/congestion for coal transportation through rail mode has been a major reason for shortages of coal in power plants dependent solely on Rail mode of transportation in the past few years. Therefore, the Sub-Group (IPP's) constituted by Infrastructure Constraints Review Committee under the aegis of Ministry of Coal reviews the weekly position of coal shortages and allocates the available rakes to different generating stations based on criticality of coal stock.

(c) The Petitioner has been seeking about 1.5 rakes per day but lower rakes are allocated to it and sometimes even allocated rake quantum is not actually materialised. In this regard, Petitioner seeks to rely on copies of relevant Communication which is annexed herewith and marked as **ANNEXURE P/60-A**.

(d) Obviously, due to discretion of Coal Companies and the Sub-Group for allocating transport mode/rakes, the proportion of coal supply from Rail or Road is not within the control of the Petitioner. However, it is expected that with removal of rail constraints by Indian Railways, the proportion of coal received from Rail mode would go up in near future. This is also evidenced by the increase in proportion of actual supply through Rail mode in last 2 years, which is shown below:

Year	Coal Received (MT)	Road Mode	Rail Mode
2022-23	4419908	71%	**29%**
2023-24	4898810	65%	**35%**

(e) Pertinently, the proportion through Rail mode has increased from 29% to 35% last year and is expected to increase by 5%, i.e. to 40%, in current year i.e. FY 2024-25 and 5% every year thereafter. Every 5% increase in Rail Mode is going to increase Rail mode quantity by about 2.5 Lakh MT of coal. Hence, FY 2023-24 level of about 17 Lakh MT receipt from Railways out of about 49 Lakh MT total coal purchase shall increase by 2.5 Lakh MT each year.

(f) From March 2022, with unloading of coal through Rail wagons, entire crushed coal of Rail mode is unloaded on track hopper and the movement of uncrushed coal to coal yard directly through trucks/Hyvas has reduced considerably with corresponding increase in stacking requirement of crushed coal unloaded by Rail wagons on track hopper. Further, all 15 track hoppers have been made operational to optimally utilise the existing infrastructure. This has led to full capacity utilization of track hopper and, hence, further increase in coal going for stacking after crushing.

(g) Thus, single track hopper is handling both rake and road mode, which needs to be emptied regularly for continuous coal feeding as per station requirements and the coal needs to be scooped out by operating the system either under bunkering or stacking. However, due to high uncertainty of the coal quality (Stone and foreign material content) and irregular timing of the Rake coal, the Petitioner cannot feed 100% Rake coal in bunkers as it may impact station parameters and may lead to forced outages.

(h) For continuous feeding, the rakes cannot be unloaded slowly as they have to be emptied and returned back in stipulated time. On the other hand, if bunker levels are healthy, the unloaded crushed coal necessarily needs to

be stacked. In effect, most of the coal from Rail mode is required to be stacked and reclaimed for parallel and continuous blending as per operational requirement. Stacking and reclaiming in parallel is possible only with two Stacker and Reclaimers.

(i) In fact, reliance is also placed on Minutes of 862nd Meeting of Sub-Group (IPPs) constituted by Infrastructure Constraints Review Committee to look into the issues of Critical Power Houses wherein it was, *inter-alia*, directed that all TPPs have to take necessary actions to optimize unloading time as to reduce the rake turnaround time as the reduced turnaround time is necessary for supply of optimum numbers of rakes. Hence, it is evident that there is a necessity of emptying the rakes early with parallel stacking and reclaiming, which requires another Stacker Cum Reclaimer. A copy of the Minutes of 862nd Meeting of Sub-Group (IPPs) constituted by Infrastructure Constraints Review Committee dated 25.10.2024 is annexed herewith and marked as **ANNEXURE P/60-B.**

(j) Further, stacking and reclaiming requirement is not continuous as it depends solely on dynamic station requirement as per beneficiary schedule. Therefore, it is not possible to use the only Stacker-cum-Reclaimer continuously for 24x365 hours. Further, there would be need for outages in working hours due to breakdown or maintenance activities.

(k) As of now, only 35% of total coal is received from Rail mode and the existing Stacker-cum-Reclaimer is being used for stacking/reclaiming more than twice the quantity it used to handle earlier with only Road mode. With further increase in Rail mode transport in coming years, that would require more parallel operation of stacking and reclaiming, working with

only one Stacker-cum-Reclaimer would not be possible as it would lead to frequent reduction/outage of generation capacity. Further, due to the non-availability of the second Stacker-cum-Reclaimer, the Petitioner would not be able to stack or reclaim the coal in parallel and during the non-availability of the succeeding feeding stream in cases of non-availability of track hopper or crusher.

(l) With the increase in operational hours of stacker reclaimer after railway operationalization, the need for redundancy in the coal handling system has become unavoidable. Further, the existing Stacker-cum-Reclaimer alone shall not be able to handle the increase in Rail mode of coal supply, delineating the need for additional Stacker-cum-Reclaimer without which additional rakes cannot be handled.

647. Hence, the acquisition of an additional Secondary Stacker cum Reclaimer is necessary not only to enhance operational efficiency and also provide redundancy in the coal handling process to avoid any generation loss, but also to ensure uninterrupted operations even in the case of maintenance, breakdowns or increased demand, contributing to the overall reliability of the power plant.

648. In addition to afore-mentioned changes, following factors have also necessitated the need for an additional Secondary Stacker cum Reclaimer: -

(a) Apart from the coal, as per the present mandate of Ministry of Power (MoP) biomass pellet firing is mandatory for every thermal plant to promote renewable sources by blending at least 5% biomass pellets, the percentage of which shall be increased gradually. As compared to coal, Pellets are not only voluminous but also very difficult to handle as their chemical properties pose fire peril.

(b) Therefore, the Petitioner has to stack these pellets in shed area (separate from Stockpile) and has to feed in bunker in the ratio of at least 5% of the total feed as per the norms. Since biomass Pellet density is almost half (700 kg/m3) that of coal (1300 kg/m3) and has lower GCV of about 3400 kCal/kg as compared to around 4000 kCal/kg, the 5% blending shall require about additional 5% (5%x4000x1300/3400/700) volume to be handled. This entire quantity i.e. 10% by volume shall be required to handled only by Stacker-cum-Reclaimer to ensure blending requirement as per the mandate.

(c) Thus, owing to higher volume of biomass pallets the handling requirement by stacker cum reclaimer shall increase further. A copy of MoP's Policy for Biomass Utilisation for Power Generation through Co-firing in Coal based Power Plants is annexed hereto and marked as **ANNEXURE P/60-C**.

(d) In order to implement the above mentioned coal receiving and biomass pallets handling plan as per above mandate along with generation requirements, a second stacker cum reclaimer is a necessity for the coal handling plant.

(e) Therefore, the acquisition of another Secondary Stacker Cum Reclaimer is not only a strategic necessity but also a vital investment in operational redundancy, efficiency and long-term sustainability.

(f) The increase in coal receipt via rake mode and the current constraints imposed by a single stacker cum reclaimer emphasizes the critical need for this expenditure to secure the plant's operational continuity and resilience.

649. Now, in this context, it is necessary to explain the claim of Stacker Cum Reclaimer:

(a) Envisaging the commencement of Railway System soon, the Petitioner had

taken quotation of second Stacker-cum-Reclaimer from the OEM, M/s Elecon on 11.11.2020. A copy of Quotation dated 11.11.2020 issued by Elecon is annexed herewith and marked as **ANNEXURE P/60-D**.

(b) As Railway System could be operationalised only by March 2022, this procurement was deferred to see operational difficulties first and since now it has become essential to procure it, the work is proposed to start in FY 2025-26 and capitalised in FY 2027-28 at total cost of Rs. 9543.86 Lakh. Actual cost shall be ascertained after competitive bidding, which shall be provided during true up process. The estimated cost break-up is as follows:

Item Description	Rate (Rs. Lakh)	Total Cost (Rs. Lakh)	Remarks
Budgetary offer received for Stacker Reclaimer Received on dated 11.11.2020	24,10,00,000.00	3448.04	5.25% Escalation considered from 2020-21
Supervision of Erection Testing & Commissioning of Reclaimer (Excluding to & fro travel charges, local lodging and boarding charges and local conveyance charges)	18,000/man/day (10x365 days)	939.98	5.25% Escalation considered from 2020-21
Supply, Erection and commissioning of Yard Conveyor including technological structure	150000.00.mtr (800 m)	1200.00	

Civil Work, E&I Works		2500.00	
Total Cost (Without Tax)		8088.02	
Total Cost with GST	@18%	9543.86	

(c) Since the above cost was based on quotation received in November -2020, the Petitioner further requested quote from other potential suppliers to ascertain such projected cost. It is relevant to mention here that M/s Thysssenkrupp India ltd. submitted their budgetary quote of Rs. 8150 lakh without GST which works out to Rs. 9617 lakh at current price level and is very close to projected cost. However, actual cost shall be ascertained after competitive bidding, which shall be provided during true up process. A copy of Quotation received through Email dated 27.01.2025 issued by Thysssenkrupp India ltd. is annexed herewith and marked as **ANNEXURE P/60-E.**

(d) For cost benefit analysis of the scheme, the Petitioner has worked out the estimated savings in ECR in FY 2023-24 passed on to beneficiaries by shifting to Rail mode transportation in the following table:

Particulars	**UoM**	**Actual**					**Projected Only Road**	**Savings**
		Only Road			**Rail/Road**			
		2019-20	**2020-21**	**2021-22**	**2022-23**	**2023-24**	**2023-24**	**2023-24**
ECR-Coal	*Rs/kWh*	2.031	1.751	1.828	2.159	2.252	2.252	-
ECR-Freight	*Rs/kWh*	0.520	0.652	0.601	0.474	0.443	0.695	0.25
ECR-Other charges	*Rs/kWh*	0.050	0.062	0.064	0.070	0.072	0.072	-
ECR-Oil	*Rs/kWh*	0.024	0.020	0.024	0.035	0.033	0.033	-
ECR billed:	*Rs/kWh*	2.625	2.485	2.518	2.737	2.800	3.052	0.25
Total Scheduled generation (PPA)	*MUs*	6348	5819	7211	7455	8017	8017	-
Total billed amount for Coal	*Cr.*	1289	1019	1318	1610	1805	1805	-
Total billed amount for	*Cr.*	330	379	434	353	355	557	202.10

Freight								
Amount billed for Other charges	*Cr.*	32	36	46	52	58	58	-
Amount billed for oil	*Cr.*	15	12	17	26	26	26	-
Total amount billed to beneficiaries	*Cr.*	1667	1446	1815	2040	2245	2447	202.10

For projection of ECR- Freight only Road Mode in FY 2023-24, CAGR from 2019-20 to 2021-22 (only Road Mode) has been applied on 2021-22 value of Rs. 0.601/kWh.

(e) Thus, with 35% Rail mode transportation in FY 2023-24, there has been a saving of about 25 paise/kWh for one year. Thus, with each additional 5% increase in Rail mode, there shall be additional saving of about 3.5 paise/kWh (25x5%/35%) and with about 7000 MUs of scheduled energy in one year, this savings corresponds to about Rs. 24.5 Crore/annum making the payback period as about 4 years.

(f) This period would further decrease if Rail mode proportion increases beyond 5% in subsequent years and all such savings shall accrue to beneficiaries thereafter. These savings would not materialise if the proposed second Stacker-cum-Reclaimer is not commissioned and may even lead to lesser availability if existing old Stacker breaks-down or is taken out for maintenance.

650. Accordingly, the Petitioner humbly requests the Hon'ble Commission to allow the above additional capital expenditure of Rs. 9543.86 Lakh in FY 2027-28 under Regulation 26(1)(g) and 26(1)(i) of the Tariff Regulations 2024.

iv. Fire Sealing & Painting for Cables

651. It is submitted that the fire risk is most significant risk the operation of the Power

Plant. Despite all efforts to mitigate its occurrence, the risk of fire remains. Therefore, the Petitioner employs both active and passive fire protection measures. Passive Fire Protection refers to the systems implemented in a building or structure to minimize the risk of fire damage. These systems inhibit fire without the need for activation or movement, slowing its progression by preventing the spread and reducing the heat of fire systems from the source. These systems are typically required post initial installation and can function autonomously without human intervention.

652. On 24.01.2024, the Office of Chief Factories Inspector, Jharkhand directed the Petitioner to submit the Safety report in accordance with the Factories Act, 1948 and rules made thereinunder. Accordingly, the Safety Report submitted by Competent Authority after Site Audit on 14th-15th June 2024 [***Refer: ANNEXURE P/31-B.***] recommended for providing fire retardant coatings and fire stops in cable galleries and cable routes as per IS 12459. For ease of reference, the Recommendation of Safety Audit Report (relevant page 36) is reproduced below:

> *"(R)* ***Documents of system of Management of change/process/plant modification/change of procedure***
>
Observation	*Recommendation*
XXX	*XXX*
2. Fire Sealing & Painting for Electrical Cables is not adequate	*Fire retardant coatings & fire stops have not been provided in cable galleries & cable vaults which are not complying the standards of IS 12459 (CODE OF PRACTICE FOR FIRE SAFETY IN CABLE RUNS) which may put the plant safety at risk.* ***MPL has been advised to comply with IS 12459-5 standards and cable to be tied with properly***

[***Emphasis supplied***]

653. Consequently, to comply with the above direction there is a need for certified cable

coating of the highest standard. It should offer more than 120 minutes of fire protection and possess the lowest toxicity index in its class. It should also ensure no toxic outgassing upon fire exposure of coated cables and switch boards, making it one of the most superior systems for Passive Fire Protection in India.

654. The requirement for this type of Fire Sealing paint and Fire retarding board varies across different areas. It is particularly necessary for fire-prone areas such as Coal Handling Plant (CHP), Boiler, Transformer area and High Tension (HT) & Low Tension (LT) panels.

655. The estimated capital expenditure is Rs. 125 lakh across the period of 2024-29. Accordingly, the Petitioner humbly requests the Hon'ble Commission to allow the above additional capital expenditure under Regulation 26(1)(d) of the Tariff Regulations 2024.

v. Procurement of Cup lock scaffolding

656. It is submitted that Cuplock scaffoldings play a crucial role in accessing the front pass of the boilers during annual overhauls at the generating station. Since 2011, the Petitioner has relied on a single set of Cuplock scaffolding supplied by BHEL to facilitate inspections and maintenance up to the goose neck area of the boilers at a height of about 50 m. Further, over the past 11 years of continuous operation, this scaffolding set has endured significant wear and damage due to frequent use and aging.

657. Given the Petitioner's boilers have been in continuous operation since their installation, there is a pressing need to inspect and address issues in critical areas above goose neck area . such as the Divisional super heater, platen super heater, and reheater at roof level at height of about 70 m. These areas are prone to tube leakage, necessitating thorough inspection, rectification and potential

replacement of components during upcoming overhauls. As existing scaffoldings is unable to reach these heights , a temporary scaffolding was being used, which poses safety threat. This is proposed to be replaced with new cuplock scaffolding of adequacy height to meet the requirement of maintenance of safety under Section 7A of Factories Act, 1948. The relevant section is reproduced below for ease of reference-

> *"7A. General duties of the occupier.—(1) Every occupier shall ensure, so far as is reasonably practicable, the health, safety and welfare of all workers while they are at work in the factory.*
> *(2) Without prejudice to the generality of the provisions of sub-section (1), the matters to which such duty extends, shall include—*
> ***(a) the provision and maintenance of plant and systems of work in the factory that are safe and without risks to health:***
> *(b) the arrangements in the factory for ensuring safety and absence of risks to health in connection with the use, handling, storage and transport of articles and substances;*
> *(c) the provisions of such information, instruction, training and supervision as are necessary to ensure the health and safety of all workers at work:*
> *(d) the maintenance of all places of work in the factory in a condition that is safe and without risks to health and the provision and maintenance of such means of access to, and egress from, such places as are safe and without such risks;*
> *(e) the provision, maintenance or monitoring of such working environment in the factory for the workers that is safe, without risks to health and adequate as regards facilities and arrangements for their welfare at work……."*

658. To facilitate safe and efficient operations during the overhauls, the Petitioner plans to procure an additional set of Cuplock scaffolding. This additional set will specifically support reaching and working on the Divisional super heater, platen super heater and reheater at roof level. By replenishing the damaged components of the existing scaffolding and sourcing additional material, the Petitioner aims to enhance safety and ergonomics during annual overhauls. This initiative is crucial for maintaining operational integrity and ensuring that inspection and maintenance tasks can be carried out safely effectively in these critical boiler areas

above the goose neck level during boiler overhaul. Skyclimber and Scaffold is an integrated part of boiler and required to work at height safely in terms of Section 7A of Factories Act, 1948.

659. In this regard the Competent Person in its Report of Safety Audit dared 14th-15th June 2024 [Refer Annexure P/31-B] has recommended as follows:

> *"Observation:*
> *Height at Work*
> .....
> *Skyclimber is required for internal inspection and maintenance of boilers.*
> *Recommendation:*
> *a) Some equipment like Sky climber need rectification as any operational malfunction may lead to serious injury. MPL team has been advised to properly maintain/replace equipment which are having high safety impact while doing maintenance jobs at site."*

660. Accordingly, the Petitioner humbly requests the Hon'ble Commission to approve this expenditure of a total of Rs. 700 lakh [i.e., Rs. 200 Lakh each in FY 2024-25, 2025-26 and 2026-27 and Rs. 100 Lakh in FY 2027-28] under Regulation 26(1)(b) and 26(1)(d) of Tariff Regulation 2024.

vi. Zero Land Fill Waste Processing Unit

661. The Jharkhand State Pollution Control Board (JSPCB) through its letter dated 13.03.2024 has directed State Government to ensure implementation of Zero Landfill Policy in terms of Solid Waste Management Rules, 2016. Following are the said Rules:

> *"56. **"waste generator" means and includes every person or group of persons**, every residential premises **and non-residential establishments** including Indian Railways, defense establishments, **which generate solid waste;***
> *57. **"waste hierarchy" means the priority order in which the solid waste is to should be managed** by giving emphasis to prevention, reduction, reuse, recycling, recovery and disposal, **with prevention being the most preferred option and the disposal at the landfill being the least;***
> *4 Duties of waste generators.- (1) Every waste generator shall,-*
> *(a) segregate and store the waste generated by them in three separate streams*

namely bio-degradable, non-biodegradable and domestic hazardous wastes in suitable bins and handover segregated wastes to authorized waste pickers or waste collectors as per the direction or notification by the local authorities from time to time;
(b) wrap securely the used sanitary waste like diapers, sanitary pads etc., in the pouches provided by the manufacturers or brand owners of these products or in a suitable wrapping material as instructed by the local authorities and shall place the same in the bin meant for dry waste or non- bio-degradable waste;
(c) ***store separately construction and demolition waste****, as and when generated, in his own premises and shall dispose off as per the Construction and Demolition Waste Management Rules, 2016; and (d) store horticulture waste and garden waste generated from his premises separately in his own premises and dispose of as per the directions of the local body from time to time.*
(2) ***No waste generator shall throw, burn or burry the solid waste generated by him, on streets, open public spaces outside his premises or in the drain or water bodies.***
16. Duties of State Pollution Control Board or Pollution Control Committee.- (1) ***The State Pollution Control Board or Pollution Control Committee shall,- (a) enforce these rules in their State through local bodies*** *in their respective jurisdiction and review implementation of these rules at least twice a year in close coordination with concerned Directorate of Municipal Administration or Secretary-in-charge of State Urban Development Department;"*

[***Emphasis supplied***]

A copy of JSPCB's Letter dated 13.03.2024 is annexed herewith and marked as **ANNEXURE P/61-A.** A copy of Solid Waste Management Rules, 2016 (dated 08.04.2016) (relevant pages) is annexed herewith and marked as **ANNEXURE P/61-B**.

662. It is submitted that the Landfill Directive of JSPCB aims to protect both human health and the environment. It aims to prevent or reduce as much as possible, any negative impact from landfill on surface water, groundwater, soil, air and human health and hence mandates zero land fill.

663. As per the Solid Management Rules 2016, the landfill site shall be 100 meters away from a river, 200 meters from a pond, 200 meters away from highways, habitations, public parks and water supply wells and 20 km away from airports/airbase.

664. Accordingly, this project is being initiated with the alignment of the above mandate and sustainability policy of Tata Power i.e., the establishment of "ZERO WASTE TO LANDFILL". The Petitioner has consulted with the Central Mechanical Engineering Research Institution (CMERI) for providing it with suitable technology to process its municipal waste to convert into the circular economy. According to the guidelines of the CMERI on processing of waste as a part of a circular economy, the Petitioner propose setting up of waste management/processing unit

665. In this regard, a capital expenditure of Rs. 120 lakh is planned for the FY 2024-25 to set up the "Zero Waste to Landfill" waste processing unit. Accordingly, the Petitioner humbly requests the Hon'ble Commission to allow the above additional capital expenditure under Regulation 26(1)(b)of the Tariff Regulations 2024.

vii. Ash Silo Loading Arrangement for Railway Wagons

666. It is submitted that after the commissioning of Plant's Railway infrastructure, movement of Rail borne coal as well as loading/dispatch of CFA/Pond Ash from Ash Silos/Pond to the newly constructed Wharf has commenced. Approximately 14000 MT/ Day of Road/Rail borne coal is being received to cater to the needs of both the Units of the Petitioner's Plant to achieve the station PLF target whereas around 5000 MT/day of ash is being generated during the utilisation of coal.

667. The generated ash quantity is being allocated to the different agencies which is collected and transported through Hyva & bulker from Ash silos to abandoned mines & cement plants respectively. Pond ash is dispatched for low land filling through road and rail transportation. For rail transportation internal shifting of ash is being made by Hyva to the newly constructed Ash Wharf for loading/unloading to the Ash Rakes as per MOEF guidelines and thereby

dispatched to the distant Cement Industries/ embankment Construction.

668. In order to increase ash Utilization, the Petitioner, with the commissioning of Railway Infrastructure has tied up with various Cement Industries of North East as well as Ash Traders for the Supply of both Fly Ash to Cement Industries and Pond Ash and for Embankment Construction.

669. As of now the Petitioner has successfully dispatched 72 Nos of Ash Rakes. Off late, the Petitioner has also constructed a dedicated Ash Wharf for the dispatch of ash to the distant Cement Industries for which the Petitioner appoints Transporters for carrying out the internal ash shifting from Main Silo/ ash Pond to the Ash wharf by Hyva covering a distance of almost 10 km up and down from Ash Pond to the Ash Wharf.

670. In doing so, there are some perpetual limitations associated with this type of Mode of Operation such as Hyva for internal transportation run on a 24X7 basis and use the plant's internal service road which becomes highly unsafe for pedestrians as well as passing bikes or small cars. During transportation, there is fugitive dust emission as well and the road becomes unclean due to spill over of ash from the Hyva. The ash which is stocked in the Ash Wharf inspite of suitable spraying arrangement is susceptible to dry wind, causing pollution to the nearby villages, for the entire operation, manpower is involved increasing the risk of accidents and lung disease. A huge cost is associated with the entire operations of internal shifting right from deployment of Hyva to water tankers for spraying and covering the stowed ash with tarpaulin.

671. Often during agitation at the Plant's main Silo, loading of Hyva for internal shifting gets hampered leading to delays in building up stock at the ash wharf.

672. This Project aims at building two numbers of Ash Siloes at the Ash Wharf of 2000

MT each such that Ash from the inlet point of the existing Main Silo can be diverted and stored in the newly constructed Ash Wharf Silo through a Piping Arrangement following which Railway wagons can be directly loaded from the newly constructed Ash Wharf Silo. This would not only reduce ash disposal cost but also fugitive emission in the silo/wharf area. Detailed computation in respect of the cost benefit analysis has been provided in section dealing with Ash Disposal Expenses for FY 2024-25 to FY 2028-29.

673. Accordingly, the Petitioner humbly requests the Hon'ble Commission to allow the above additional capital expenditure of Rs. 2500 lakh in FY 2027-28 under Regulation 26(1)(e) and 26 (1)(i) of the Tariff Regulations 2024.

viii. Extension of Store

674. This scheme is continuation of store renovation initiated in 2019-24, the reasons and justifications for which have been given in true-up section and the Petitioner craves leave of this Hon'ble Commission to rely on the submissions made in the true-up section which are not repeated herein for the sake of brevity.

675. Accordingly, the Petitioner humbly requests the Hon'ble Commission to allow the above additional capital expenditure with total estimated cost of Rs. 180 Lakh in the FY 2024-25 and FY 2025-26 under Regulation 26(1)(d) and 26(1)(b) of Tariff Regulations 2024.

ix. Concertina Coil on Top of Boundary Wall

676. It is submitted that in November 2018, the Intelligence Bureau (IB) conducted a security inspection at the plant premises of the Petitioner, identifying critical security vulnerabilities and issuing directives to enhance safety measures due to perceived threats from nearby areas with a presence of CPI (Maoist) cadre and frequent gate blockades by affected local communities.

677. The IB's assessment highlighted inadequate and unsustainable sections of concertina wire along the perimeter wall, stressing the urgent need for its continuous deployment to regulate security issues effectively. Concertina wire, due to its flat design, offers quick deployment and serves as a robust obstacle against intrusions, ensuring enhanced security, affordability, low maintenance, and durability.

678. The Petitioner, now having completed the boundary wall in 2019-24 tariff period and to address these security concerns comprehensively, proposes a phased project to install a concertina coil on top of the boundary wall, covering approximately 13,500 meters by FY 2028-29. This initiative aims not only to deter crime and protect assets but also to prevent sabotage and unauthorized access, thereby, safeguarding enterprise interests and ensuring a secure working environment for employees. Additionally, the project promises cost savings compared to traditional security measures like foot patrols, offering a reliable and efficient solution to maintain the integrity and safety of the plant premises. The IB Report was submitted in the proceedings for Petition No. 408/GT/2020, relevant extract of which is as follows:

> *"SECURITY RECOMMENDATIONS:*
> *(1) PHYSICAL SECURITY*
> *1. Barbed wire fence on both sides of the village road passing through the middle of installation may be replaced with masonry perimeter wall on both sides with the provision of concertina coil overhang.*
> ***2. Concertina coil overhang may be provided all over the perimeter wall.***
> *3. The patrolling track along the perimeter wall is not metalled. It is away from the perimeter at several points and it is not continuous. The continuity of the motorable patrolling track is essential for reaching of security personnel and fire tenders in the remotest areas.. A metalled patrolling track may be laid all along (near) the perimeter for seamless movement of security personnel and fire tenders....."*
>
> [***Emphasis supplied***]

679. In terms thereof, the project is proposed to be executed phase wise:

(a) In FY 2025-26, 4500 m, starting from Main gate to ATM gate via underpass to TPSDI gate.

(b) In FY 2026-27, 4500 m, starting from TPSDI gate to ATM gate via Intake water gate.

(c) In FY 2027-28, 4500 m, starting from the Underpass to Main gate via CHP, Sana boundary along with rail line.

(d) In FY 2028-29, rest Ash pond area.

680. The total project cost is estimated to be Rs. 200 lakh (in FY 2025-26 to FY 2028-29). Further, the Capitalization phasing and the details of apportioned Project Cost are as shown in the following Table.

Financial Year	**2025-26**	**2026-27**	**2027-28**	**2028-29**	**Total**
Estimated Cost in Rs. Lakh	50	50	50	50	200

681. Accordingly, the Petitioner humbly requests the Hon'ble Commission to allow the above additional capital expenditure under Regulation 26(1)(d) of the Tariff Regulations 2024.

x. Installation of CCTV

682. It is respectfully submitted that the surrounding areas of the Petitioner's generating station are known to be strongholds of CPI (Maoist) cadre, thereby posing a significant security concern. Additionally, there exists a persistent risk of damage to the plant's infrastructure and operations caused by outsourced workers and employees, particularly during strikes or agitations. Several such disturbances have been reported in the past, underscoring the critical need for

enhanced security measures.

683. In light of the foregoing, the Petitioner prays that this Hon'ble Commission may kindly consider the installation of CCTV systems across the plant premises. Such a measure would act as a deterrent to potential security threats and enable real-time monitoring of activities within and around the plant, thereby ensuring the safety and security of its operations and infrastructure. In this regard, the Intelligence Bureau (IB), in its recent report dated 15-16th February 2024, has strongly recommended that:

> *"14 Security recommendations.....*
>
> *3. CCTV at gates may be installed at persons height so that clear image of driver, occupants of vehicle and vehicle number may be captured.*
> *4. CCTV footage may be kept for a minimum of 90days.*
> ***5. CCTV cameras should be aligned, positioned, numbered and laid out to allow operators to easily follow and intruder from one view to another."***

As submitted earlier, a copy of the IB Report (confidential) shall be submitted as and when directed by this Hon'ble Commission.

684. In view of the IB report referenced above, the Petitioner proposes the installation of new cameras at strategic locations within the plant premises to enhance the safety and security of the plant. In view thereof, it is necessary to install 108 cameras during 2024-29 which also includes installation of Video Analytics.

685. In view thereof, the estimated total cost for procurement and installation of new camera is Rs. 495 Lakh, which is proposed to be capitalized as Rs. 120 Lakh in FY 2024–25, Rs. 225 Lakh in FY 2025–26 and Rs. 150 Lakh in FY 2026–27.

686. Accordingly, the Petitioner humbly requests this Hon'ble Commission to grant approval for this proposal under Regulation 26(1)(d) of Tariff Regulation 2024, which is critical for enhancing the security, operational efficiency and reliability of

the system

xi. Safety (platform in coal mill area)

687. This scheme is continuation of true-up period and, accordingly, the reasons and justifications for which have been given in true-up section and the Petitioner craves leave of this Hon'ble Commission to rely on the submissions made in the true-up section which are not repeated herein for the sake of brevity.

688. The Estimated cost of the project is Rs. 100 lakh in FY 2024-25, Rs. 50 lakh in FY 2025-26 and Rs. 50 lakh in FY 2026-27. Accordingly, the Petitioner humbly requests the Hon'ble Commission to allow the above additional capital expenditure under Regulation 26(1)(d) of the Tariff Regulations 2024.

xii. Upgradation of HP Bypass system

689. It is submitted that the Steam Turbine operates under normal conditions with steam temperatures reaching approximately 540°C. During a shutdown event, the turbine undergoes coasting down from its synchronous speed of 3000 RPM. To prevent boiler tripping and maintain operational stability, the High-Pressure Bypass (BD & BPE) system plays a crucial role, originally integrated as part of the Unit's initial project package.

690. Over time, the need for system upgrades has become necessary to align with future demands and mitigate inherent operational challenges. The current servo control principle used in valves and actuators relies on pressurized oil, where servo valves operate by controlling oil flow through 3-micron holes. However, these tiny holes are prone to clogging from dust and dirt in the oil, even with diligent maintenance, leading to temporary system failures during emergencies or frequent operations.

691. To address these issues, an upgraded solution using proportion control valves has

been successfully implemented but only for the Low-Pressure Bypass (LPBP) system supplied by M/s. CCI, has demonstrated stable performance since commissioning. Failure incidents with HP Bypass valve stems and actuators, resulting in partial generation losses, have highlighted the need for improvement. Failures were attributed to factors such as sharp cross-sectional changes, poor material quality due to inadequate heat treatment and manufacturing imperfections like improper alignment and sharp transitions. A copy of the Communication dated 04.07.2023 issued by M/s CCI in this regard is annexed herewith and marked as **ANNEXURE P/62.**

692. To enhance valve reliability and longevity, a non-weld seat design patented by M/s. CCI has been chosen. This design eliminates sharp areas in valve and actuator stems, utilizes high-strength materials for components like the X19 spindle and undergoes rigorous manufacturing, heat treatment and surface hardening processes. Additional design features include specially designed flat sealing surfaces to minimize erosion from flashing condensate, hard facing on erosion-prone areas and a quick-change seat that simplifies maintenance without welding and Post-Weld Heat Treatment (PWHT), thereby improving overall valve safety and ease of maintenance.

693. The proposed project aims to achieve several benefits such as mitigating risks of partial or complete generation loss due to sudden HP Bypass valve or actuator failures. Reduce DM (Demineralized) water loss and noise emissions by avoiding prolonged venting of safety valves to the atmosphere. Ensure sustained flow through boiler heating surfaces, crucial for protecting the re-heater during Unit start-ups. Enable the Unit to continue operating on house load in case the grid cannot accept power, maintaining operational flexibility and reliability.

694. Accordingly, the Petitioner humbly requests the Hon'ble Commission to allow the above additional capital expenditure of Rs. 650 Lakh in FY 2024-25 and Rs. 650 Lakh in FY 2025-26 under Regulation 26(1)(i) of the Tariff Regulations, 2024.

xiii. Road Over Bridge

695. It is submitted that the Petitioner's generating station receives nearly 14,000 metric tons of coal daily via road and rail, generating 5,000 metric tons of ash daily. This ash is allocated to various agencies for collection and transportation as per environmental guidelines.

696. The need for a Road Over Bridge (ROB) arose due to disruptions in vehicle movement caused by the regular receipt of coal rakes and the placement of empty ash rakes for loading at the newly constructed wharf. The ROB aims to ensure the safe and efficient movement of vehicles, including emergency services and personnel across the plant's critical areas. Furthermore, the Standards for Road Rail Level Crossings also stipulates that the road rail level crossings despite being adequately designed are accident prone and, therefore, where it is not possible to construct over/under bridges due to technical/financial constraint, the safety standards must be adhered to. In this regard, reliance is placed on Railway Standards for Railroad Level Crossing (dated 1999) and its relevant extract is reproduced below for ease of reference-

> *"1.1.* ***Road-rail level crossings, however, adequately designed and constructed, are accident prone.*** ***<u>However, where it is not possible from engineering and economic considerations</u>*** *to provide road over/under bridges, and level crossings have to be provided, the standards given here under should be followed in the interest of maximum safety."*
>
> [***Emphasis Supplied***]

A copy of the Railway Standards for Railroad Level Crossing (dated 1999) (relevant pages) is annexed herewith and marked as **ANNEXURE P/63.**

697. Hence, initially, the project considered a Foot Over Bridge (FOB) but was later revised to an ROB due to increased complexity and safety concerns. The ROB will be constructed near the OHE Mast–MPL-13/39 to facilitate uninterrupted movement of heavy vehicles and personnel. A detailed field survey was conducted to record the topography and elevation of the area and an engineering plan was prepared and finalized after Petitioner's scrutiny. Geotechnical investigations have been carried out and the findings are being analyzed to prepare a comprehensive report. The ROB will significantly improve safety and operational efficiency by providing a dedicated route for vehicles and personnel, reducing the risk of accidents and ensuring smooth coal and ash handling operations.

698. The estimated cost of the ROB project is Rs. 1300 lakh. The project aims to enhance safety and operational efficiency at the Petitioner's Plant by providing a reliable and safe route for vehicle and personnel movement.

699. In view of the above, the Petitioner plans to incur an additional capital expenditure of Rs. 1300 lakh in FY 2027-28 towards the Road Over Bridge and accordingly, requests the Hon'ble Commission to allow the same under Regulation 26(1)(b), 26(1)(d) and 26(1)(i) of the Tariff Regulations 2024.

xiv. Unit wise segregation of PWS HT Board

700. It is submitted that at the Petitioner's generating station, currently there is a dedicated and common HT Power and Motor Control Centre (PMCC) Primary Water Supply ("**PWS**") catering to the water requirement of both Units. The 6.6 kV switchboard supplies the entire raw water and cooling water system for both Units.

701. However, with the increasing age of the plant, the risks of breakdown are increasing as well and any fault in PWS Bus or bus-coupler may result in forced

outage of both Units. Additionally, during the Annual Overhaul of one of the Units, it is not possible to carry out the outage of both the buses of the HT board as the other Unit remains under operation, this creates a very high risk in maintenance of Bus-Coupler panel, due to which the maintenance of bus-coupler cannot be carried out.

702. In the current setting, there are 2 CW Pumps namely CWP#1A and CWP#2A in Bus A and similarly, 2 CW Pumps namely CWP#1C and CWP#2C in Bus B. Therefore, during the Annual Overhaul of a Unit when either Bus A or Bus B is taken down for maintenance, generation of the running Unit needs to be brought down due to unavailability of one CW Pump.

703. The situation leads to generation being carried out on part load for a minimum of 8 hrs (i.e. 4hrs for maintenance of each of the bus), this problem can simply be avoided if there are separate HT Board for Unit-1 and Unit-2 as the running unit will not be affected during the Annual Overhaul of the other Unit.

704. Hence, the need has arisen to have completely separate PWS HT Boards for Unit-1 and Unit-2 along with dedicated Unit-wise switchboard catering to Unit-wise Cooling Water (CW) Pumps, ACW Pumps and Cooling Tower (CT) Fans.

705. Therefore, the aforesaid expenditure may kindly be allowed at Rs 400 lakh for FY 2028-29. The Petitioner prays to the Hon'ble Commission to approve the aforesaid Additional Capital Expenditure for increased efficiency and reliability of the plant under the Regulation 26(1)(i) of Tariff Regulations 2024.

xv. Reliability (Structural Strengthening - BTG, CHP)

706. This is continuation of the scheme of Structural Strengthening of BTG, CHP and Crusher House executed in 2019-24. Detailed reasons and justifications have been provided in true-up section and the Petitioner craves leave of this Hon'ble

Commission to rely on the submissions made in the true-up section which are not repeated herein for the sake of brevity.

707. In view of the above, it is humbly prayed before the Hon'ble Commission to allow Rs. 480.86 lakh in FY 2024-25 and Rs. 200 lakh in FY 2025-26 in this regard and accordingly, requests the Hon'ble Commission to allow the same as additional capital expenditure under Regulation 26(1)(d) and 26(1)(i) of the Tariff Regulations 2024.

xvi. Ash Wharf

708. It is submitted this in continuation of the scheme proposed in the true-up section of the present Petition and the contentions raised are reaffirmed and not being repeated for the sake of brevity.

709. Accordingly, the Petitioner requests the Hon'ble Commission to allow the projected additional capital expenditure by the Petitioner of Rs. 121.40 lakh in FY 2024-25 and Rs. 584 lakh in FY 2025-26 under Regulation 26(1)(b), 26(1)(e) and 26(1)(i) of the Tariff Regulations 2024

Re. DECAPITALIZATION

710. Decapitalization against the proposed Capital Expenditure Schemes involving complete or partial Replacement of the assets have been worked out by de-escalating the value of the new asset by 5% per year until the year of capitalisation of the old asset and the same has been considered for arriving at net Addition during 2024-29.

711. However, it may kindly be noted that such decapitalization is on a provisional basis and is subject to truing-up at the end of the Tariff Period. Detailed working for Decapitalization for the proposed Capital Expenditure Schemes is enclosed and marked as **ANNEXURE P/64**. Proposed decapitalization for 2024-29 is

summarized in the following Table:

Table 38: Summary of Proposed Decapitalization for 2024-29

Historical/Original Value	2024-25	2025-26	2026-27	2027-28	2028-29	Total
Decapitalization	1317.11	1653.59	1142.42	1775.18	305.41	6193.71

712. The Petitioner humbly requests that in the event if certain additional capital expenditures are not being considered by the Hon'ble Commission after prudence check, the decapitalization corresponding to said ACE may kindly be excluded for the purpose of tariff. This shall avoid double deduction from the capital cost being allowed and the same would be fair and just.

Re. NORMATIVE IDC ON EXCESS EQUITY FOR 2024-29

713. The Petitioner humbly submits that the proposed additional capital expenditures for period 2024-29 has been envisaged to be funded through internal accruals without any actual loan. With regard to claim of Normative IDC on Normative Loan in excess to 30% of the equity, the Petitioner humbly seeks liberty of the Hon'ble Commission to claim the Normative IDC on excess equity at the time of truing-up for 2024-29 based on actual cash flows pertaining to these capital expenditures on quarterly basis.

Re. ANNUAL FIXED CHARGES FOR 2024-29

714. The Annual Fixed Charges comprise of the following components:

(f) Return on Equity;

(g) Interest on Loan;

(h) Depreciation;

(i) O&M Expenses; and

(j) Interest on Working Capital.

Re. RETURN ON EQUITY

715. Regulation 30 of Tariff Regulations 2024 stipulates the following norms for Return on Equity,

> *"**30. Return on Equity**: (1) Return on equity shall be computed in rupee terms, on the equity base determined in accordance with Regulation 18 of these regulations.*
>
> *(2) Return on equity shall be computed at the base rate of 15.50% for thermal generating station, transmission system including communication system and run-of river hydro generating station, and at the base rate of 16.50% for the storage type hydro generating stations including pumped storage hydro generating stations and run-of river generating station with pondage:*
>
> *(3) Return on equity for new project achieving COD on or after 01.04.2024 shall be computed at the base rate of 15.00% for the transmission system, including the communication system, at the base rate of 15.50% for Thermal generating station and run-of-river hydro generating station and at the base rate of 17.00% for storage type hydro generating stations, pumped storage hydro generating stations and run-of-river generating station with pondage;*
>
> *Provided that return on equity in respect of additional capitalization beyond the original scope, including additional capitalization on account of the emission control system, Change in Law, and Force Majeure shall be computed at the base rate of one-year marginal cost of lending rate (MCLR) of the State Bank of India plus 350 basis points as on 1st April of the year, subject to a ceiling of 14%; Provided further that:*
>
> *i. In case of a new project, the rate of return on equity shall be reduced by 1.00% for such period as may be decided by the Commission if the generating station or transmission system is found to be declared under commercial operation without commissioning of any of the Free Governor Mode Operation (FGMO), data telemetry, communication system up to load dispatch centre or protection system based on the report submitted by the respective RLDC;*
>
> *ii. in case of an existing generating station, as and when any of the requirements under (i) above of this Regulation are found lacking based on the report submitted by the concerned RLDC, the rate of return on equity shall be reduced by 1.00% for the period for which the deficiency continues;*
>
> *iii. in the case of a thermal generating station:*
>
> *a) rate of return on equity shall be reduced by 0.25% in case of failure to achieve the ramp rate as specified under Regulation 45(9) of IEGC Regulations, 2023.*
>
> *b) an additional rate of return on equity of 0.125% shall be allowed for*

every incremental ramp rate of 0.50% per minute achieved over and above the ramp rate specified by Central Electricity Authority, subject to the ceiling of additional rate of return on equity of 1.00%

31. Tax on Return on Equity. *(1) The rate of return on equity as allowed by the Commission under Regulation 30 of these regulations shall be grossed up with the effective tax rate of the respective financial year. The effective tax rate shall be calculated at the beginning of every financial year based on the estimated profit and tax to be paid estimated in line with the provisions of the relevant Finance Act applicable for that financial year to the concerned generating company or the transmission licensee by excluding the income of non-generation or non-transmission business, as the case may be, and the corresponding tax thereon.*

Provided that in case a generating company or transmission licensee is paying Minimum Alternate Tax (MAT) under Section 115JB of the Income Tax Act, 1961, the effective tax rate shall be the MAT rate, including surcharge and cess;

Provided further that in case a generating company or transmission licensee has opted for Section 115BAA, the effective tax rate shall be tax rate including surcharge and cess as specified under Section 115BAA of the Income Tax Act, 1961.

(2) The rate of return on equity shall be rounded off to three decimal places and shall be computed as per the formula given below:

Rate of pre-tax return on equity = Base rate / (1-t)

(3) The generating company or the transmission licensee, as the case may be, shall true up the effective tax rate for every financial year based on actual tax paid together with any additional tax demand, including interest thereon, duly adjusted for any refund of tax including interest received from the income tax authorities pertaining to the tariff period 2024-29 on actual gross income of any financial year. Further, any penalty arising on account of delay in deposit or short deposit of tax amount shall not be considered while computing the actual tax paid for the generating company or the transmission licensee, as the case may be.

Provided that in case a generating company or transmission licensee is paying Minimum Alternate Tax (MAT) under Section 115JB, the generating company or the transmission licensee, as the case may be, shall true up the grossed up rate of return on equity at the end of every financial year with the applicable MAT rate including surcharge and cess.

Provided that in case a generating company or transmission licensee is paying tax under Section 115BAA, the generating company or the transmission licensee, as the case may be, shall true up the grossed up rate of return on equity at the end of every financial year with the tax rate including

surcharge and cess as specified under Section 115BAA.

Provided that any under-recovery or over recovery of grossed up rate on return on equity after truing up, shall be recovered or refunded to beneficiaries or the long term customers, as the case may be, on a year to year basis."

716. Based on the above quoted Regulations, the opening equity base for period 2024-29 pertaining to the Petitioner's Generating Station has been arrived at corresponding to the closing Equity as on 31.03.2024 along with equity additions in 2024-29 and RoE has been computed accordingly.

717. It is humbly submitted that the Petitioner is currently paying MAT and the same has been considered as effective Tax Rate for the purpose of Grossing-up of the Rate of Return. Further, based on the Additional Capitalization during Tariff Period 2024-29, as discussed in the above Sub-Sections, computation of actual RoE (Pre-Tax) for Assets under Original Scope of Work and Assets beyond the Original Scope of Work for Tariff Period 2024-29 pertaining to the Petitioner Generating Station has been tabulated as follows:

Table 39: Proposed RoE during 2024-29 – Assets Under Original Scope of Work (Rs. Lakh)

Particulars	2024-25	2025-26	2026-27	2027-28	2028-29
Opening Equity	168292.46	169939.14	171783.22	172610.50	173780.44
Net Addition during the year	1646.67	1844.09	827.28	1169.95	613.38
Closing Equity	169939.14	171783.22	172610.50	173780.44	174393.82
Average Equity	169115.80	170861.18	172196.86	173195.47	174087.13

Particulars	2024-25	2025-26	2026-27	2027-28	2028-29
Rate of Return (Pre-Tax)	18.78%	18.78%	18.78%	18.78%	18.78%
Total RoE	**31763.33**	**32091.15**	**32342.01**	**32529.57**	**32697.05**

Table 40: Proposed RoE during 2024-29 – Assets beyond the Original Scope of Work (Rs. Lakh)

Particulars	2024-25	2025-26	2026-27	2027-28	2028-29
Opening Equity	1291.15	1846.82	2518.52	2777.61	6833.26
Net Addition during the year	555.68	671.70	259.08	4055.66	142.50
Closing Equity	1846.82	2518.52	2777.61	6833.26	6975.76
Average Equity	1568.98	2182.67	2648.07	4805.44	6904.51
Rate of Return (Pre-Tax)	14.70%*	14.70%	14.70%	14.70%	14.70%
Total RoE	**230.64**	**320.85**	**389.27**	**706.40**	**1014.96**

**One year SBI MCLR as on 01.04.2024 + 350 bps Grossed with MAT Rate*

718. It is, therefore, humbly prayed that the Hon'ble Commission may kindly approve the proposed Return on Equity (Pre-Tax) on Original and Beyond the Original Scope of work for Tariff Period 2024-29 as shown in the above Tables for computation of the Annual Fixed Charges pertaining to the Generating Station.

Re. INTEREST ON LOAN

719. Regulation 32 of Tariff Regulations 2024 stipulates the Interest on Loan Capital norms:

> *"32. Interest on loan capital:*
> *(1) The loans arrived at in the manner indicated in Regulation 18 of these regulations shall be considered gross normative loans for the calculation of interest on loans.*
> *(2) The normative loan outstanding as on 1.4.2024 shall be worked out*

by deducting the cumulative repayment as admitted by the Commission up to 31.3.2024 from the gross normative loan.

(3) The repayment for each of the years of the tariff period 2024-29 shall be deemed to be equal to the depreciation allowed for the corresponding year or period. In case of de-capitalization of assets, the repayment shall be adjusted by taking into account cumulative repayment on a pro rata basis, and the adjustment should not exceed cumulative depreciation recovered up to the date of de-capitalisation of such asset.

(4) Notwithstanding any moratorium period availed of by the generating company or the transmission licensee, as the case may be, the repayment of the loan shall be considered from the first year of commercial operation of the project and shall be equal to the depreciation allowed for the year or part of the year.

(5) The rate of interest shall be the weighted average rate of interest calculated on the basis of the actual loan portfolio or allocated loan portfolio;

Provided that if there is no actual loan outstanding for a particular year but the normative loan is still outstanding, the last available weighted average rate of interest of the loan portfolio for the project shall be considered;

Provided further that if the generating station or the transmission system, as the case may be, does not have any actual loan, then the weighted average rate of interest of the loan portfolio of the generating company or the transmission licensee as a whole shall be considered.

Provided that the rate of interest on the loan for the installation of the emission control system commissioned subsequent to date of commercial operation of the generating station or unit thereof, shall be the weighted average rate of interest of the actual loan portfolio of the emission control system, and in the absence of the actual loan portfolio, the weighted average rate of interest of the generating company as a whole shall be considered, subject to a ceiling of 14%;

Provided further that if the generating company or the transmission licensee, as the case may be, does not have any actual loan, then the rate of interest for a loan shall be considered as 1-year MCLR of the State Bank of India as applicable as on April 01, of the relevant financial year.

(6) The interest on the loan shall be calculated on the normative average loan of the year by applying the weighted average rate of interest.

(7) The changes to the terms and conditions of the loans shall be reflected from the date of such re-financing."

720. The Petitioner has claimed the Weighted Average Rate of Interest for computation of Interest on the Loan to be calculated on the basis of the Loan Portfolio during

the year and for the interest rate, the Petitioner, in terms of 1st proviso of Regulation 32(5) of Tariff Regulations, 2024, has considered the rate as applicable for 2023-24 for FY 2024-25 to FY 2028-29.

721. Accordingly, the following Table shows the computation of Interest on Loan for the period 2024-29. Interest on Loan has been computed by applying Rate of Interest on the Average Loan for the year which has been arrived at after considering the Opening Balance for the year, Debt component of Additional Capitalization, Deemed Repayment of Loan (Annual Depreciation) and Closing Balance derived therefrom:

Table 41: Proposed Interest on Loan during 2024-29

Particulars	2024-25	2025-26	2026-27	2027-28	2028-29
Gross Normative loan – Opening	395695.09	400833.90	406704.07	409238.91	421431.99
Cumulative repayment of Normative loan up to previous year	291150.90	306946.52	323207.24	340336.47	358135.47
Net Normative loan – Opening	104544.19	93887.38	83496.84	68902.44	63296.51
Add: Increase due to addition during the year / period	6060.80	7027.69	3334.53	13435.70	1977.50
Deletion during the year	1317.11	1653.59	1142.42	1775.18	305.41
Deletion during the year (70% of de-cap)	921.98	1157.51	799.69	1242.63	213.79
Less: Decrease due to de-	712.23	929.23	668.43	1074.71	191.46

Particulars	2024-25	2025-26	2026-27	2027-28	2028-29
capitalisation during the year / period					
Less: Decrease due to reversal during the year / period	0.00	0.00	0.00	0.00	0.00
Add: Increase due to discharges during the year / period	0.00	0.00	0.00	0.00	0.00
Less: Repayment of Loan	16507.85	17189.94	17797.66	18873.71	20066.93
Net Normative loan - Closing	93887.38	83496.84	68902.44	63296.51	45184.75
Average Normative loan	99215.78	88692.11	76199.64	66099.47	54240.63
Weighted average rate of interest	8.93%	8.93%	8.93%	8.93%	8.93%
Interest on Loan	**8855.54**	**7916.25**	**6801.23**	**5899.73**	**4841.27**

722. It is, therefore, humbly requested that the Hon'ble Commission may kindly approve the proposed Interest on Loan for the period 2024-29 as computed in the above Table for computation of the Annual Fixed Charges pertaining to the Generating Station.

Re. DEPRECIATION

723. Regulation 33 of Tariff Regulations 2024 stipulates the following norms for Depreciation: -

> *"**33. Depreciation**: (1) Depreciation shall be computed from the date of commercial operation of a generating station or unit thereof or a transmission system or element thereof including communication system. In the case of the tariff of all the units of a generating station or all elements of a transmission system including the communication system for which a single*

tariff needs to be determined, the depreciation shall be computed from the effective date of commercial operation of the generating station or the transmission system taking into consideration the depreciation of individual units:

Provided that the effective date of commercial operation shall be worked out by considering the actual date of commercial operation and installed capacity of all the units of the generating station or capital cost of all elements of the transmission system, for which a single tariff needs to be determined.

(2) The value base for the purpose of depreciation shall be the capital cost of the asset admitted by the Commission. In case of multiple units of a generating station or multiple elements of a transmission system, the weighted average life for the generating station or the transmission system shall be applied. Depreciation shall be chargeable from the first year of commercial operation. In the case of commercial operation of the asset for a part of the year, depreciation shall be charged on a pro rata basis.

(3) The salvage value of the asset shall be considered as 10%, and depreciation shall be allowed up to the maximum of 90% of the capital cost of the asset:

Provided that the salvage value for IT equipment and software shall be considered as NIL and 100% value of the assets shall be considered depreciable;

Provided further that in the case of hydro generating stations, the salvage value shall be as provided in the agreement, if any, signed by the developers with the State Government for the development of the generating station:

Provided also that the capital cost of the assets of the hydro generating station for the purpose of computation of depreciated value shall correspond to the percentage of the sale of electricity under long-term power purchase agreement at regulated tariff:

Provided also that any depreciation disallowed on account of lower availability of the generating station or unit or transmission system, as the case may be, shall not be allowed to be recovered at a later stage during the useful life or the extended life.

(4) Land other than the land held under lease and the land for a reservoir in case of a hydro generating station shall not be a depreciable asset and its cost shall be excluded from the capital cost while computing the depreciable value of the asset.

(5) Depreciation for Existing Projects shall be calculated annually based on the Straight Line Method and at rates specified in Appendix-I to these regulations for the assets of the generating station and transmission system:

Provided that the remaining depreciable value as on 31st March of

the year closing after a period of 12 years from the effective date of commercial operation of the generating station or transmission system, as the case may be, shall be spread over the balance useful life of the assets.

Provided further that in the case of an existing hydro generating station, the generating company, with the consent of the beneficiaries, may charge depreciation at a rate lower than that specified in Appendix I and Appendix II to these Regulations to reduce front loading of tariff.

(6) Depreciation for New Projects shall be calculated annually based on the Straight Line Method and at rates specified in Appendix-II to these regulations for the assets of the generating station and transmission system:

Provided that the remaining depreciable value as on 31st March of the year closing after a period of 15 years from the effective date of commercial operation of the generating station or the transmission system, as the case may be, shall be spread over the balance useful life of the assets.

Provided further that in the case of a new hydro generating stations, the generating company, with the consent of the beneficiaries, may charge depreciation at a rate lower than that specified in Appendix II to these Regulations to reduce front loading of tariff.

(7) In the case of the existing projects, the balance depreciable value as on 1.4.2024 shall be worked out by deducting the cumulative depreciation as admitted to by the Commission up to 31.3.2024 from the gross depreciable value of the assets.

(8) The generating company or the transmission licensee, as the case may be, shall submit the details of capital expenditure proposed to be incurred during five years before the completion of useful life along with proper justification and proposed life extension. The Commission, based on prudence check of such submissions, shall approve the depreciation by equally spreading the depreciable value over the balance Operational Life of the generating station or unit thereof or fifteen years, whichever is lower, and in case of the transmission system shall equally spread the depreciable value over the balance useful life of the Asset or 10 years whichever is higher.

(9) In case of de-capitalization of assets in respect of generating station or unit thereof or transmission system or element thereof, the cumulative depreciation shall be adjusted by taking into account the depreciation recovered in tariff by the de-capitalised asset during its useful service."

724. The Plant will complete 12 years after COD on 31.03.2024, therefore the remaining depreciable value has been spread across the balance useful life in accordance with Regulation 33(5) of the Tariff Regulations 2024.

725. The computation of depreciation is provided in the Table below:

Table 42: Proposed Depreciation for Tariff Period 2024-29 (Rs. Lakh)

Particulars	2024-25	2025-26	2026-27	2027-28	2028-29
Opening Capital Cost	565278.70	572619.86	581005.82	584627.02	602045.69
Closing Capital Cost	572619.86	581005.82	584627.02	602045.69	604565.29
Average Capital Cost	568949.28	576812.84	582816.42	593336.35	603305.49
Freehold land	17639.91	17639.91	17639.91	17639.91	17639.91
Rate of depreciation	3.33%	3.42%	3.50%	3.64%	3.81%
Depreciable value	496178.44	503255.64	508658.86	518126.80	527099.02
Balance useful life at the beginning of the period	12.42	11.42	10.42	9.42	8.42
Remaining depreciable value	205027.54	196309.12	185451.62	177790.33	168963.55
Depreciation (for the period)	**16507.85**	**17189.94**	**17797.66**	**18873.71**	**20066.93**
Cumulative depreciation at the end of the period (w/o adjustment)	307658.75	324136.47	341004.90	359210.18	378202.40
Less: Cumulative depreciation adjustment on account of de-capitalisation	712.23	929.23	668.43	1074.71	191.46
Net Cumulative depreciation at the end of the period	**306946.52**	**323207.24**	**340336.47**	**358135.47**	**378010.95**

726. It is humbly submitted that the Hon'ble Commission may kindly approve the proposed Depreciation for Tariff Period 2024-29 as computed in the above Table for computation of the Annual Fixed Charges for the Generating Station.

Re. O&M EXPENSES

727. Regulation 36 of Tariff Regulations 2024 stipulates the Normative O&M Expenses,

> *"36. **Operation and Maintenance Expenses:***
> *"(1) **Thermal Generating Station:** Normative Operation and*

Maintenance expenses of thermal generating stations shall be as follows:

(1) Coal based and lignite fired (including those based on Circulating Fluidized Bed Combustion (CFBC) technology) generating stations, other than the generating stations or units referred to in clauses (2), (4) and (5) of this Regulation:

Year	***200/210/ 250 MW Series***	***300/330/350 MW Series***	***500 MW Series***	***600 MW Series***	***800 MW Series and above***
FY 2024-25	*40.92*	*34.04*	*27.17*	*25.78*	*23.20*
FY 2025-26	*43.07*	*35.83*	*28.60*	*27.13*	*24.42*
FY 2026-27	*45.33*	*37.71*	*30.10*	*28.56*	*25.70*
FY 2027-28	*47.71*	*39.69*	*31.68*	*30.06*	*27.05*
FY 2028-29	*50.21*	*41.78*	*33.34*	*31.64*	*28.47*

Provided also that operation and maintenance expenses of generating station having a unit size of less than 200 MW not covered above shall be determined on a case-to-case basis

"36

...

(6) The Water Charges, Security Expenses, Ash Transportation Expenses and Capital Spares for thermal generating stations shall be allowed separately after prudence check:

Provided that water charges shall be allowed based on water consumption depending upon type of plant and type of cooling water system or water agreement with state govt./utilities, and the norms specified by the Ministry of Environment, Forest and Climate Change subject to prudence check. The details regarding the same shall be furnished along with the petition;

Provided further that the generating station shall submit the assessment of the security requirement and estimated expenses along with the petition seeking the determination of tariff;

Provided also that the generating station shall submit the details of year-wise actual capital spares consumed individually costing above ₹10 Lakh at the time of truing up with appropriate justification for incurring the same and substantiating that the same is not funded through compensatory allowance as per Regulation 17 of Central Electricity Regulatory Commission 73 (Terms and Conditions of Tariff) Regulations, 2014 or Special Allowance or claimed as a part of additional capitalisation or consumption of stores and spares and renovation and modernization."

Re. Raw Water Charges, Security Expenses

a. Water Charges:

728. Regulation 36(6) of the Tariff Regulations, 2024 stipulates that the water charges

shall be allowed separately, it is reiterated that the Petitioner's Generating Station is a Coal-based Thermal Power Plant with Induced Draft Cooling Towers utilizing a Circulating Water system for the cooling of the condenser and the ancillary equipment. Further, Raw Water is also utilized for various purposes the majority of which are listed below:

(a) Preparation of the De-mineralized Water utilized for the generation of Steam in the Boiler.

(b) De-ashing of Bottom Ash

(c) Plant usage and cleaning as Service Water

(d) Fire Hydrant System

729. It is submitted that the Water Charges are based on the Gross Generation during the year and estimated Specific Raw Water Consumption per Unit. Specific Raw water consumption in FY 2023-24 is 2.49 m^3 per MWh which is below the MoEFCC guidelines and the same is taken for projection. It is, therefore, humbly requested that the Hon'ble Commission may kindly approve the proposed Raw Water Charges for Tariff Period 2024-29 as computed in the Table below.

Table 43: Raw Water Charge proposed for Tariff Period 2024-29 (in Rs. Lakh)

Particulars	UoM	2024-25	2025-26	2026-27	2027-28	2028-29
Gross Generation	Mus	7818.30	7818.30	7818.30	7839.72	7818.30
Specific Raw water Consumption for FY 2023-24	m^3/Mwh	2.49	2.49	2.49	2.49	2.49
Total Raw Consumption	m^3	19,486,825	19,486,825	19,486,825	19,540,214	19,486,825
Rate of Raw Water Charges	Rs. /m^3	17.14	18.85	20.73	22.81	25.09
Total raw water Expenses	Rs. Lakh	3339.22	3673.15	4040.46	4456.68	4888.96

b. Security Expenses:

730. Regulation 36(6) of the Tariff Regulations, 2024 stipulates that Security expenses shall be allowed separately, and the generating station shall submit the assessment of the security requirement.

731. Based on the actual security expenses for the period FY 2019-20 to FY 2023-24, the Compounded average growth rate (CAGR) of the actual security expenses works out to 9.475% for the above period.

732. For the purpose of estimating the security expenses for the period FY 2024-25 to FY 2028-29 with the existing set-up, the security expenses of 2023-24 has been escalated year on year with the rate of 9.475%. The following table shows computation of CAGR for 2019-24 alongwith the projected Security Expenses for the generating station for the period FY 2024-25 to FY 2028-29.

Table 44: Security Expenses for the period 2019-24

Particulars	Unit	2019-20	2020-21	2021-22	2022-23	2023-24
Security Expenses	Rs. lakh	723.82	834.98	918.57	1056.85	1039.65
CAGR	%					9.475

Table 45: Projected Security Expenses for the period 2024-29

Particulars	Unit	2024-25	2025-26	2026-27	2027-28	2028-29
Security Expenses	Rs. lakh	1138.15	1245.99	1364.04	1493.28	1634.77

Re. Ash Disposal Expenses

733. As submitted in the True-up Section, due to limited capacity of Ash Pond, it is required to be evacuated regularly in accordance with the statutory provisions of

the MoEF mandating 100% ash utilization. The Petitioner has considered the options of disposing of the unutilized Ash through bulkers to sites for back filling of mines and to other approved locations for land filling and offtake by Cement companies through rakes and Ash bulkers thereby incurring the cost towards excavation and transportation of Pond Ash/Fly Ash.

734. Since inception, the Petitioner has been utilizing the nearby abandoned mines of ECL located at about 20 km from MPL's Generating Station for backfilling. However, in absence of availability of abandoned mines nearby due to deallocation in recent past and the newly allotted mine at a significantly longer distance of about 65-70 km from MPL Plant, Petitioner has presently considered the rate of disposal considering an average distance of about 41 km by also considering utilization of the nearby approved low lying areas for land filling. Relevant Documents in this regard is have been provided in True-up Section of the Petition and not repeated here for brevity. Considering the unavailability of nearby mines and in order to bring down the overall Ash Disposal Expenses year on year, Petitioner is exploring ways to increase the cost effective utilisation of Ash i.e., increase the offtake by Cement Companies through Rakes/bulkers with subsidy and simultaneously enhancing the facilities by constructing Ash Wharf and Ash Silos loading arrangement for Railway Wagon at the Petitioner's Plant for optimizing transportation logistics, controlled storage of Ash and facilitating efficient & quick loading of Ash Rakes in all seasons in addition to minimizing environmental impact.

735. With such endeavours under execution/ or in Plan, Petitioner in the instant Petition has proposed Capex Schemes namely Ash Wharf (about Rs 7 Cr) and Ash Silos loading arrangement for Railway Wagon (about Rs 25 Cr) for kind

consideration and approval of the Hon'ble Commission. As per estimation, by having these facilities in place as per Capitalization phasing proposed in the Petition, Petitioner can avoid Ash Disposal Expenses of about 40 Cr in the tariff period 2024-29 itself as summarized below.

Table 46: Projected Savings/ Avoided Ash Disposal Expenses with ACE for the period 2024-29

FY	Ash Disposal Expenses w/o ACE -A (Rs. Lakh)	Ash Disposal Expenses with ACE - B (Rs. Lakh)	Savings/Avoided Ash Disposal Expenses (A -B) (Rs. Lakh)
2024-25	6468.93	5873.93	595.00
2025-26	6792.38	6254.62	537.76
2026-27	6792.38	6254.62	537.76
2027-28	7144.22	6578.62	565.59
2028-29	7129.39	5477.36	1652.02
Total			**3888.13**

736. The Petitioner is further enclosing a calculation of projected Ash Disposal Expenses under both the Scenarios i.e. with and without having such Additional Capital Expenditure as **ANNEXURE-P/65 (COLLY.)** for kind perusal of the Hon'ble Commission. The Petitioner for the purpose of tariff has considered the projected Ash Disposal Expenses considering the benefits of the proposed Additional Capitalisation as discussed above.

737. Further, it is relevant to mention that the Hon'ble Commission after considering the submissions of the Petitioner in the previous Tariff Petitions acknowledged the cost towards 100% Ash utilization as a statutory requirement as per MoEF Notification dated 3.11.2009 and allowed Ash Disposal Expenses as claimed by the Petitioner subject to true-up at the end of the tariff period. Moreover, the Hon'ble

Commission after considering the comments of all stakeholders has duly acknowledged this cost under Regulation 36(1)(6) of Tariff regulation 2024 to be allowed separately after prudence check.

738. In view of above, Petitioner alike previous years has to incur expenses towards 100% utilization of the Fly Ash as mandated under MoEF notification for ensuing years as well due to reasons beyond the control of the Petitioner. Thus, the Hon'ble Commission is humbly requested to allow recovery of proposed Ash Disposal Expenses for FY 2024-25 to FY 2028-29. The Petitioner has projected Ash Disposal Expenses in the following Table subject to true-up.

Table 47: Projected Ash Disposal expenses for FY 2024-25 to FY 2028-29

FY	Consumption Plan MT(As Per 85% PLF) (MT)	Ash Generation (MT)	Fly Ash & Bottom Ash (Cost effective Utilisation) (MT)	FLY Ash (Stowing of Mines) (MT)	Bottom Ash Stowing to mines (MT)	Pond Ash Evacuation (MT)	Ash Disposal Cost (In Rs. Lakh)
FY-25	4555195	1883573	8,35,507	5,40,504	5,55,232	4,30,000	5873.93
FY-26	4555195	1883573	9,12,757	4,91,367	5,27,119	4,30,000	6254.62
FY-27	4555195	1883573	9,12,757	4,91,367	5,27,119	4,30,000	6254.62
FY-28	4567675	1888733	9,15,257	4,92,713	5,28,563	4,30,000	6578.62
FY-29	4555195	1883573	10,09,319	4,29,946	4,91,978	4,30,000	5477.36

**Detailed Computations and assumptions are provided in Tariff Forms and ANNEXURE P/65 and significant reduction in cost in FY 29 is due to the proposed Additional Capital Expenditure. Weight in col 3 is w/o Moisture and in Col 4 to 7 are with moisture.*

Table 48: Projected Ash Disposal expenses for FY 2024-25 to FY 2028-29 (Rs. Lakh)

Particulars	2024-25	2025-26	2026-27	2027-28	2028-29
Ash Disposal Expenses	5873.93	6254.62	6254.62	6578.62	5477.36

Re. Capital Spares

739. Further, as stipulated in the above Regulations i.e 36(1)(b), the Capital Spares can also be admitted separately if the same does not form a part of the Additional Capitalization claimed in the Tariff Period 2024-29. It is humbly submitted that the Petitioner requires several Capital Spares for the critical equipment during the present Tariff Period in order to ensure the reliability and availability of the main equipment. Further, these Capital Spares have not been included in the Additional Capitalization claimed in the earlier Section of the present Petition. The Petitioner, therefore, humbly requests the Hon'ble Commission to approve the Capital Spares as shown in the following Table for the Tariff Period 2024-29.

Table 49: Summary of Capital Spares for the Tariff Period 2024-29

Sr. No.	Name of the Scheme	2024-25	2025-26	2026-27	2027-28	2028-29	Total
i.	400 kV Switchyard	25.00	25.00	45.00	45.00		140.00
ii.	Crusher Rotor Assembly		200.00			250.00	450.00
iii.	Procurement of Condensate Extraction Pump Rotor Assembly			125.74			125.74
iv.	Procurement of Standby CW Pump and Motor			400.00	800.00		1200.00
v.	FD Fan Rotor Assembly		300.00				300.00
vi.	ID Fan Rotor Assembly			100.00			100.00
vii.	Cooling Tower Internals	200.00	200.00				400.00
viii.	IP Turbine Blades Replacement	900.00					900.00
ix.	PA Fan Rotor Assembly			300.00			300.00

Sr. No.	Name of the Scheme	2024-25	2025-26	2026-27	2027-28	2028-29	Total
x.	Procurement of TDBFP Drive Turbine Rotor Assembly			400.00			400.00
xi.	Boiler Circulating Water Pump Assembly	800.00					800.00
xii.	Procurement of LT Breaker & Relays	100.00	100.00	60.00	60.00		320.00
xiii.	Turbine Bearing set procurement	261.01					261.01
xiv.	LTSH Coil Assembly	950.00	550.00	500.00			2000.00
xv.	Procurement of Upgraded Coal Burner Tip and Nozzle			200.00	100.00		300.00
xvi.	Procurement of Sky Climber components and spares.				150.00	150.00	300.00
xvii.	ID Fan and VFD Transformer	50.00	50.00				100.00
xviii.	Replenishment of Capital Spares	675.61					675.61
	Total	**3961.62**	**1425.00**	**2130.74**	**1155.00**	**400.00**	**9072.36**
	Less 10% Residual Value	396.16	142.50	213.07	115.50	40.00	907.24
	Net Capital Spares	**3565.46**	**1282.50**	**1917.67**	**1039.50**	**360.00**	**8165.12**

740. Reasons for procurement of the above Capital Spares are provided hereunder:

i. 400 kV Switchyard

741. It is submitted that the 400 kV Switchyard encompasses essential equipment and the failure of any of these components could result in generation losses. The currently installed Isolators, Breakers, Lightning Arresters and Current

Transformer are experiencing issues such as frequent hot spots in the Isolator, alignment problems, leakage issues in the breaker, pole discrepancies and failed Lightning Arresters.

742. During a recent bay upgrade, the existing central breaker isolator was replaced with a double breaker system. The same upgrade was applied to the lightning arrester, wave trap and current transformer, enhancing them with a higher rating capacity.

743. Currently, the aforementioned equipment lack sufficient spares. If any equipment fails, it could lead to generation losses. The available spare parts are also outdated and their manufacturing lead time is extensive. In this regard, reliance is placed on OEM Recommendation *vide* Email dated 08.02.2024 which is being annexed herewith and marked as **ANNEXURE P/66**. Therefore, there is a necessity to procure spare parts to prevent any disruption in generation.

744. Consequently, the Petitioner seeks to procure 1 unit of a 3000 A Breaker set, 3 units of Current Transformer with a 3150 A current rating, 1 set of 3-phase double breaker Isolator, 1 set of a 3-phase Central breaker Isolator, 1 unit of a Wave trap and 3 units of a 336 kV Lightning arrester. This procurement will ensure the continuity of power generation, provide a swift and cost-effective solution to equipment breakdowns and minimize downtime and lost productivity.

745. It is humbly requested before the Hon'ble Commission to approve the estimated cost of Rs 140 lakh spread across the period FY 2024-25 to FY 2027-28 under Regulation 36(1)(6) of the Tariff Regulations 2024.

ii. Crusher Rotor Assembly

746. It is submitted that Rotor Assembly is the main component of Crusher (Ring Granulator) (RG1 & RG2). The Crusher crushes to the tune of 12000-15000 MT of

coal on a daily basis. Different measures are in place to segregate stones & other foreign materials from coal at different stages in the coal flow path prior to feeding into the crusher, however, still the feeded coal contains a high quantity of foreign material like stones & non-magnetic metallic material etc. Since the Crusher is directly handling ROM coal, so its internals are most vulnerable to foreign materials and over period of time its internals such as the Suspension Bar, arm and shaft have worn out.

747. It is pertinent to mention that OEM Guidelines state that the rotor assembly needs to be replaced every 3 years to avoid unplanned shutdowns and to ensure smooth functioning of the plant. In this regard it is important to note that the last replacement was carried out on 03.05.2020 and 12.09.2020 for RG#2 and RG#1 respectively.

748. Taking into account the current state of the rotor assembly and the OEM recommendations, Capital expenditure of Rs. 450 lakh for procurement of Crusher rotor assembly is planned in FY 2025-26 and FY 2028-29. It is humbly requested before the Hon'ble Commission to approve the above expenditure under Regulation 36(1)(6) of the Tariff Regulations 2024 .

iii. Procurement of Condensate Extraction Pump Rotor Assembly

749. It is submitted that the Condensate Extraction Pump (CEP) plays a critical role in Petitioner's generating station's power generation process, circulating condensate water from the Hot well to the Deaerator at a pressure of 22 kg/cm2 through low pressure (LP) heaters, crucial for creating high-pressure steam in the cylinders. Currently, the Petitioner operates with 2 CEPs running simultaneously under normal conditions, with 1 CEP on standby.

750. However, due to the complex nature of the multistage, multi-shaft vertical pump,

any breakdown requires extensive inspection and repair, taking up to 7 days. This process involves lifting the entire assembly, opening all 6 stages and reassembling it, during which time the Unit operates without a standby pump, leading to potential genèration losses.

751. To mitigate these risks and reduce downtime, the Petitioner proposes the installation of a complete spare CEP rotor assembly that can be readily deployed in case of emergencies. This initiative aims to shorten the repair time from 7 days to just 1 day by swiftly replacing the faulty assembly with the spare. This proactive measure not only minimizes the risk of generation loss during breakdowns but also enhances maintenance efficiency during shutdowns. The availability of a standby rotor assembly will streamline annual overhauling processes, ensuring that operational parameters remain within limits and bolstering overall unit availability and reliability.

752. In summary, implementing this project will ensure uninterrupted power generation by eliminating extended downtime due to CEP failures, thereby optimizing operational continuity and safeguarding against potential generation losses associated with unplanned outages. Accordingly, the Petitioner is planning to incur the estimated total Project expenditure cost of Rs. 125 lakh in FY 2026-27 based on quotation received in FY 2021-22 as shown below.

Sl. No	Bearing Details to procure	Price Estimated (in Rs. Lakh)
01	EN6J40 CEP assembly (De-Staged, 5 stage Condensate Pump). Rotor and stator parts complete assembly	55.68
02	Considering 7.5% escalation for 5 years FY 2021-22	76.56

	to FY-2026-27	
03	Cost of other Accessories-Yoke piece in between CEP & Motor, Coupling Set, Seal Assembly	30.00
04	Total Base Price of Assembly	106.56
05	Total Cost inclusive GST	125.74

753. It is humbly requested before the Hon'ble Commission to approve the above expenditure under Regulation 36(1)(6) of the Tariff Regulations 2024 .

iv. Procurement of Standby CW Pump and Motor

754. It is submitted that the Cooling Water Pumps (CWP) at Petitioner's generating station play a crucial role in maintaining efficient operation by cooling exhaust steam in the condenser and circulating it back to the wet cooling tower. Currently, each Unit is equipped with 3 CW Pumps operating at 100% capacity, without any standby pump available. This setup poses a significant risk as any tripping of a running pump during normal operation directly translates into generation losses due to the absence of backup. The CW Pumps are designed as multistage and multicasting units, requiring a minimum of 12-15 days for inspection and repair in case of breakdown during operation, leading to prolonged partial generation losses.

755. To mitigate these risks and ensure continuous operation, the Petitioner proposes the installation of one standby Common CW Pump assembly and interconnecting it with both Units. This standby pump can be activated as needed for either Unit, effectively eliminating the risk of generation losses caused by the sudden failure of a running pump. The necessary provisions for installation at the site have already been made through previous projects, including the interconnection setup for the standby pump.

756. The benefits of this project are substantial in terms of:

(a) **Elimination of Generation Losses**: The availability of a standby CW Pump assembly ensures uninterrupted operation even if one of the primary pumps breaks down, thereby preventing any downtime-related generation losses.

(b) **Operational Reliability**: With a standby pump in place, the Petitioner can maintain operational reliability by quickly switching to backup during maintenance or unexpected pump failures.

(c) **Cost Savings**: By preventing downtime and associated generation losses, the project contributes to significant cost savings over the long term, offsetting the initial investment in the standby pump assembly.

757. In conclusion, implementing a standby CW Pump assembly at Petitioner's generating station is crucial for enhancing operational resilience, minimizing downtime and ensuring continuous power generation without interruptions due to pump failures. This proactive approach will enhance overall operational efficiency and reliability, aligning with Petitioner's goals of optimizing plant performance and reducing operational risks.

758. The proposed estimated project cost is Rs. 1200 lakh with apportionment of Rs. 400 lakh in FY 2026-27 and Rs. 800 lakh in FY 2027-28. It is humbly requested before the Hon'ble Commission to approve the above expenditure under Regulation 36(1)(6) of the Tariff Regulation 2024 .

v. FD Fan Rotor Assembly

759. It is submitted that at the Petitioner's generating station, the four Fans play a critical role in achieving full load for each Unit, with two fans installed per Unit i.e. 4 in all and no standby fan available. These fans are essential for maintaining

operational capacity and any sudden failure results in a unit tripping, leading to significant generation losses. Even a planned shutdown of one FD Fan reduces the Unit capacity to half load.

760. Over the past decade, these FD Fans have operated continuously amidst challenging conditions, positioned near ash and coal reject pipelines that contribute to high levels of abrasion and wear. The coal used at Petitioner's generating station contains a substantial amount of ash, up to 46%, which is due to reasons beyond the control of Petitioner and exacerbates erosion within the coal reject lines and occasionally causes leaks, resulting in spillage onto the FD Fan foundations.

761. In the past, the ingress of foreign materials has caused internal damage to FD Fan components. Each Unit can generate up to 315 MW with one FD Fan operational, indicating potential generation losses of approximately Rs.1.1 Crore (5.04 MU) per day due to reduced capacity. The static components of the FD Fans, such as ducts and casings, are less susceptible to damage compared to the rotating parts, including the rotor assembly comprising bearings, shafts, impeller blades and associated components.

762. To mitigate risks associated with FD Fan failures, the Petitioner currently maintains one spare complete rotor assembly. However, to ensure readiness for emergencies or scheduled maintenance, the Petitioner plans to procure an additional FD Fan rotor assembly in FY 2025-26, with the purchase order slated for FY 2024-25 and delivery expected within 12 months.

763. This proactive approach aims to minimize downtime, reduce the potential for forced outages, and optimize maintenance schedules, thereby safeguarding against significant generation losses and ensuring operational reliability at the

generating station.

764. The estimated expenditure for the planned scheme is Rs. 300 lakh in FY 2025-26. It is humbly requested before the Hon'ble Commission to approve the above expenditure under Regulation 36(1)(6) of the Tariff Regulations 2024.

vi. ID Fan Rotor Assembly

765. It is submitted that at Petitioner's generating station, the ID Fans, crucial for handling hot flue gases, have been operational for a decade. Over time, they have faced significant challenges due to corrosion and erosion. These fans adjust their speed based on the load requirements of the Unit, facilitated by Variable Frequency Drives (VFDs). This variable operation places considerable stress on the ID Fan bearings, necessitating periodic replacements to maintain optimal performance and reliability.

766. Currently, the Petitioner maintains only 3 spare bearing assemblies against the 8 ID Fan bearing assemblies in operation. To ensure preparedness for emergencies or scheduled maintenance, the Petitioner plans to procure additional ID Fan bearing assemblies. This proactive measure aims to mitigate risks associated with sudden failures, which have the potential to cause forced outages and significant generation losses due to prolonged revival times.

767. The timely availability of spare ID Fan bearing assemblies is critical for swiftly restoring units to full operational capacity in the event of fan failures. This approach not only enhances equipment reliability and performance but also eliminates revenue losses resulting from Unit unavailability. By bolstering the spare parts inventory, the Petitioner aims to optimize maintenance practices, minimize downtime and uphold operational excellence at the facility. The estimated expenditure is Rs. 100 lakh in FY 2026-27.

768. It is humbly requested before the Hon'ble Commission to approve the above expenditure under Regulation 36(1)(6) of the Tariff Regulations 2024.

vii. Cooling Tower Internal

769. It is submitted that this capital spare procurement is a continuation of 2019-24 period, the details of which are not repeated here for sake of brevity. Balance part of the procurement/replacement is being proposed in 2024-29. It is submitted that the Availability of Cooling Towers ("**CT**") are vital for any thermal power station. Each Unit of Petitioner's plant is having 22 nos. of Cooling Tower Cells and in total 44 nos. CT Cells for two Units. The effectiveness of Cooling Towers is essential to reduce the temperature of Circulating Water for condensation of exhaust steam inside the Condenser and maintenance of TG Vacuum.

770. Over a period of continuous use under a highly moist environment combined with the effect of ageing has resulted in more chances of premature failures of Cooling Tower Internals. Therefore, for reliable operation of the Cooling Tower healthiness of all components, viz, PVC fills, drive shaft, drift eliminators, flow control butterfly valves and blades of axial flow fans of the Cooling tower is very much essential.

771. Hence, it is planned to replace the Cooling tower Parts to avoid any breakdown. In view of the above facts and to increase availability and reliability of Units for smooth, uninterrupted power supply, Rs. 500 Lakh has been incurred in the procurement of IDCT Internal Spares during 2019-24 and for 2024-29 an amount of Rs. 400 Lakh spread over FY 2025-26 to FY 2026-27 is proposed here to replace the existing ones for smooth running of plant.

772. It is humbly requested before the Hon'ble Commission to approve the above expenditure under Regulation 36(1)(6) of the Tariff Regulations 2024 .

viii. IP Turbine blades replacement

773. It is submitted that the major overhaul of Unit #2 conducted in July-August 2019 marked a significant milestone as the first capital overhaul since the Unit's commissioning in 2012. Overseen by original equipment supplier (OES) SIEMENS, the inspection revealed severe damage to the first three rows of blades on the turbine side of the IP rotor, attributed to foreign object damage (FOD). The OES in its report, apart from other operational strategy to be adopted, has recommended the following :

"spare blades to be kept in stock....damaged blades to be replaced in next MOH"

A copy of the Report (relevant pages) issued by the OES (M/s Siemens Ltd. India) is annexed herewith and marked as **ANNEXURE P/67**.

774. Given the turbine's critical role in extracting thermal energy from pressurized steam to generate power, maintaining the health and integrity of all turbine components is paramount for reliable and safe power plant operation.

775. The damage to the IP turbine blades occurred due to impacts from foreign objects, affecting the friction tightening method used to secure blades within each row. Each row typically includes one "lock blade" positively locked to the rotor, with other blades tightened through friction and pressure against each other. The impact of foreign particles can compromise this friction grip, potentially loosening blades over time.

776. During operations such as load throw-offs, tripping or over speeding, these loose blades pose a risk of dislodging due to centrifugal forces during turbine rotation. Such dislodgements can lead to catastrophic failures, damaging the turbine casing and other rotating blades, and resulting in substantial asset loss and extended periods of generation downtime.

777. In light of OES recommendation during the overhaul, it is proposed to replace the damaged blades promptly. This proactive measure aims to eliminate unsafe operational conditions within the turbine and mitigate the risk of catastrophic failure.

778. By replacing the damaged blades, continuous and healthy turbine operation can be ensured, improving overall physical parameters such as bearing vibration and other turbovisory indicators. This initiative not only safeguards personnel and machinery but also prevents potential losses from extended generation downtime and asset damage, thereby maintaining operational reliability and safety at the power plant. The estimated cost of the capital spare proposed project is Rs. 900 lakh in FY 2024-25.

779. It is humbly requested before the Hon'ble Commission to approve the above expenditure under Regulation 36(1)(6) of the Tariff Regulations 2024.

ix. PA Fan Rotor Assembly

780. It is submitted that previously, the Petitioner experienced damage to primary air (PA) Fan blades due to the ingress of foreign materials, which disrupted operations significantly. Each Unit at the Petitioner's generating station relies on PA Fans and with loss of one PA Fan the Unit is able to achieve a maximum generation capacity of 315 MW (60% of full load only). Consequently, the partial loss of one PA Fan results in the Petitioner incurring substantial generation losses amounting to approximately Rs.1.1 Crore (5.04 MU) per day.

781. The static components of the PA Fan, such as ducts, upper and lower casings and diffusers, are relatively less susceptible to damage. However, the rotating components—comprising the PA Fan rotor assembly, including the rotor housing, bearing assembly, shaft, impeller blade bearing assembly, servomotor assembly,

blades, fasteners and lubrication oil system—are prone to wear and damage over extended periods of operation in harsh environments.

782. Currently, the Petitioner maintains one spare complete rotor assembly and blades for emergency replacements. However, with only one spare available for four operational PA Fans across Units #1 and #2 at the Petitioner's generating station, there is a need to procure an additional PA Fan rotor assembly to meet the OEM-recommended level of critical spare parts.

783. The proposed project to procure an additional PA Fan rotor assembly aims to ensure timely availability for full-load Unit revival in case of PA Fan failure. This proactive measure is expected to reduce Unit downtime, thereby enhancing equipment reliability and performance. Moreover, it will eliminate revenue losses attributed to Unit unavailability caused by PA Fan failures, which have previously led to forced outages and significant generation losses. Given the history of consecutive failures in two PA Fans, ensuring adequate spare parts availability is crucial for maintaining operational continuity and minimizing financial impacts associated with downtime and repairs.

784. It is humbly requested before the Hon'ble Commission to approve the expenditure proposed to be incurred to the tune of Rs. 300 lakh in FY 2026-27 under Regulation 36(1)(6) of the Tariff Regulations 2024.

x. Procurement of TDBFP Drive Turbine Rotor Assembly

785. It is submitted that the Turbine Driven Boiler Feed Pump (TDBFP) at the Petitioner's generating station plays a critical role in drawing feed water from the deaerator and supplying it to the boiler economizer via HP heaters at a discharge pressure of approximately 200 kg/cm2. There are two TDBPs in each Unit and four in all for both Units. During normal operations, both TDBFPs are essential at

100% capacity to achieve full Unit load. To ensure operational reliability, there is one Motor Driven Boiler Feed Pump (MDBFP) held on standby, which becomes active during Unit start-up or in the event of steam unavailability to drive the TDBFPs. Additionally, MDBFP substitutes for any non-operational TDBFP, but its operation requires significant auxiliary power due to its 1 MW motor.

786. Currently, the plant lacks a spare rotor for the drive turbine of the TDBFP. This critical component has a long lead time of at least 12 months for delivery. Therefore, any sudden failure of the drive turbine rotor would render the TDBFP unavailable for this extended period, resulting in heightened auxiliary power consumption. Moreover, breakdowns of either the remaining TDBFP or MDBFP during this waiting period would directly cause generation losses, reducing unit capacity to 50% with only one operational BFP.

787. The above capital spare proposal aims to procure a spare rotor assembly for the drive turbine, thereby mitigating risks associated with extended downtime and high auxiliary power consumption. By having a spare rotor assembly readily available, the downtime for repairing the drive turbine can be reduced to 7 days, effectively preventing an increase in auxiliary power consumption and eliminating the possibility of partial generation losses due to the breakdown of running pumps during the procurement period for a failed rotor set.

788. In summary, the implementation of the Spare Rotor Assembly project is expected to yield several benefits such as avoidance of increased auxiliary power consumption during extended breakdown periods of the TDBFP drive turbine, elimination of partial generation losses caused by breakdowns of operational pumps during the procurement period for a replacement rotor set, prevention of extended shutdown periods for TDBFP due to rotor defects identified during

annual overhauls, as a ready spare assembly will be available for immediate replacement. The estimated capital spare cost is Rs. 400 lakh in FY 2026-27.

789. It is humbly requested before the Hon'ble Commission to approve the above expenditure under Regulation 36(1)(6) of the Tariff Regulations 2024.

xi. Boiler Circulating Water Pump Assembly

790. It is submitted that the Petitioner's generating station operates with 6 Boiler Circulating Water (BCW) Pumps across its two Units, each Unit equipped with 3 pumps following a 2 operational and 1 standby scheme. In June 2023, the Petitioner's generating station encountered a critical operational issue with BCW Pump-2C failing to start due to overcurrent protection during startup. This failure necessitated bringing the standby BCW Pump-2B into operation for Unit-2 synchronization with the grid. Subsequently, BCW Pump-2B exhibited rising cavity temperatures nearing tripping values after a few days of operation, despite attempts with OEM consultations to resolve the issue which proved ineffective. Consequently, Unit-2 had to be shut down to rectify both pumps on-site.

791. An OEM service engineer assessed the situation, replacing BCW Pump-2C with an available old spare pump after condition assessment. However, BCW Pump-2B was found to have an unacceptable Insulation Resistance (IR) value upon inspection, rendering it unusable for further operation. BCW Pump-2C underwent partial on-site overhauling and was placed back into operation as a standby, pending OEM clearance for regular operation. Since Unit 2 could not be run on single healthy pump, there was generation loss for 10 days.

792. These failures led to a 10-day outage of Unit-2, resulting in significant generation losses. To prevent such incidents in the future, the OEM also recommends inspecting and overhauling each BCW Pump every 4-5 years, with motor

rewinding and comprehensive inspection every 8 years. A copy of the relevant pages of OEM's recommendations are annexed hereto and marked as **ANNEXURE P/68**.

793. To align with the OEM's maintenance schedule, the Petitioner plans to replace 2 pumps annually per Unit, using spare pumps for replacement during scheduled shutdowns. This approach ensures that replaced pumps can be overhauled and cycled into the other Unit's operational rotation the following year.

794. Currently, the Petitioner holds only 1 spare BCW Pump against the 6 pumps in operation, highlighting the need to procure an additional spare to adhere strictly to the OEM-recommended maintenance schedule. With 2 spare BCW Pumps in stock, the Petitioner aims to manage scheduled shutdowns effectively, minimizing the risk of forced outages and mitigating the associated high costs of generation loss.

795. Given the critical nature of BCW Pumps within the boiler's water and steam circuit, any repair or replacement necessitates a full Unit shutdown, typically lasting 10 to 15 days depending on the availability of essential spares and spare pumps. Recognizing the importance of these pumps in maintaining operational continuity, the Petitioner proposes the replacement of 2 pumps per Unit to ensures readiness with essential spares to respond promptly to emergencies and minimize downtime impacts. The estimated expenditure for the project is Rs. 800 lakh in FY 2024-25.

796. It is humbly requested before the Hon'ble Commission to approve the above expenditure under Regulation 36(1)(6) of the Tariff Regulations 2024.

xii. Procurement of LT Breaker & Relays

797. It is submitted that the Petitioner has identified the need to replace its existing LT

breakers and protection relays, which have been in operation for over 13 years and have surpassed 20000 operational cycles which is beyond recommended operational life [***Refer Annexure P/48***].

798. The ageing equipment has shown significant performance degradation, leading to frequent breakdowns, particularly in critical switchgears like Unit and station boards. This situation poses a direct threat to plant generation. The protection relays, crucial for identifying and isolating defective parts to prevent catastrophic losses, are also outdated and have reached the end of their useful life. Therefore, the Petitioner plans to retrofit these components in a phased manner to ensure the plant's smooth and reliable operation.

799. The necessity of the procurement stems from the need to enhance the reliability and stability of plant operations. New LT breakers and relays equipped with advanced technology will help in significantly improving plant performance. The inclusion of inbuilt Disturbance Recorders in the new relays will enable precise fault identification, further contributing to operational efficiency. This upgrade is essential to mitigate the risks associated with the failure of ageing equipment, which directly impacts power generation.

800. The procurement involves a comprehensive scope that includes the procurement and retrofitting of LT breakers and relays in a phased manner. The benefits of this procurement are substantial. It will eliminate frequent breakdowns, reduce inventory management complexities and ensure reliable plant operation. Additionally, the introduction of new technology and digitalization will modernize the plant's infrastructure, leading to improved efficiency and performance. These upgrades are crucial for maintaining the plant's operational integrity and supporting its long-term sustainability.

801. The estimated capital spares cost is Rs. 320 Lakh. In view of the above, the Petitioner plans to incur expenditure of Rs. 100 lakh in FY 2024-25, Rs. 100 lakh in FY 2025-26, Rs. 60 Lakh in FY 2026-27 and Rs. 60 Lakh in FY 2027-28 towards the procurement of LT breakers and relays.

802. It is humbly requested before the Hon'ble Commission to approve the above expenditure under Regulation 36(1)(6) of the Tariff Regulations 2024.

xiii. Turbine Bearing Set procurement

803. During the Annual Overhaul of Unit-1 carried out by the Petitioner in October-November 2017, TG Bearing sets were found in non-usable condition and a new set of bearings was installed as per the recommendation of M/s BHEL [***Refer Annexure P/43***], as M/s BHEL was engaged as the principal service provider for TG Overhauling. Since only one set of bearings was procured as Initial Spares the current stock for Turbine Bearing is Nil.

804. Considering the application criticality of the installed spare and following the recommendation by M/s BHEL another set of bearings needs to be procured as capital spare. The absence of ready-to-use spare bearings can lead to extended shutdown periods, resulting in significant generation losses and potential secondary damage to other critical components due to high vibration. The benefits of this expenditure are multifaceted:

(a) Firstly, having a ready-to-use spare set of bearings will mitigate the risk of prolonged shutdowns and generation losses, which can amount to 12.6 MUs/day.

(b) Secondly, it ensures that any sudden breakdowns due to bearing failure can be addressed promptly, thereby maintaining the reliability and availability of the power Units.

(c) Thirdly, the procurement from the OEM guarantees the reliability and fitment cum interchangeability of the bearings, which is crucial given the critical application area.

805. The estimated spare cost is Rs. 261.01 lakh in FY 2024-25. Accordingly, it is humbly requested before the Hon'ble Commission to approve the above expenditure under Regulation 36(1)(6) of the Tariff Regulations 2024.

xiv. LTSH Coil Assembly

806. It is submitted that Low-Temperature Superheater (LTSH) Coils are located in the upper section of the second pass of the boiler. The flue gas generated from coal combustion in the first pass contains a significant amount of abrasive ash particles. As these ash particles flow through the LTSH zones, they gain momentum due to the negative draft created by the suction pressure of the Induced Draft (ID) fan. The high-velocity passage of flue gas over the LTSH tubes results in erosive wear on the tube surfaces.

807. The boiler was originally designed to accommodate coal with an ash content of 36%. However, the quality of coal being fired has deteriorated, with ash content increasing to 40–44%. To generate the required heat, a higher quantity of coal must be burned, leading to increased flue gas production. The excess ash in the flue gas, compared to the design specifications, significantly impacts the LTSH tube surfaces, causing premature failures. Repairing such failures typically takes 50 to 80 hours, provided spare parts are readily available.

808. During annual shutdowns, measuring the thickness of all pressure part tubes is part of the scheduled maintenance. The LTSH section comprises 118 coils arranged in an inline configuration within the second pass, divided into a Top Bank and a Bottom Bank. The Top Bank consists of 24 rows of tubes, each

measuring 13,716 mm in length, while the Bottom Bank has 18 rows of similar length. Accessibility is limited to the top and bottom rows of each coil, leaving the areas between the coils unapproachable for testing. These inaccessible regions are equally susceptible to erosion.

809. Due to the complex design, positioning and mounting of the LTSH tube banks, damage occurring between the Top and Bottom Banks cannot be repaired on-site and often necessitates the full replacement of the affected bank. Incomplete mapping of LTSH tube thickness has led to unplanned boiler outages caused by tube failures in recent years.

810. After studying past failures, BHEL, the OEM in the MoM dated 13-14 June 2018 recommended the replacement of LTSH sections in next 4 years. For ease of reference, the relevant extracts of BHEL's recommendations in the MoM dated 13-14 June 2018 (Refer Annexure P/22B) is reproduced below:

> *"MPL presented the failure history, inspection findings for the Economizer banks, and LTSH Tubes. BHEL stated the major root cause resulting in erosion in LTSH and Economizer banks also on account of Coal Characteristics and properties. Since MPL is required to continually required to operate with .coal properties having higher ash content i.e. towards worst side of the designed coal, as per availability in the local region,* ***additional care may be exercised to ensure replacement of above Economizer and LTSH sections, at least once in next 4 years,*** *followed by scheduled periodic maintenance to maintain the safety and reliability of boiler operation for plant generation."*

811. In light of the identified issues, this proposal underscores the importance of periodic renewal of all coils to maintain the system's reliability and availability.

812. Accordingly, the Petitioner, through this instant Petition, respectfully seeks the Hon'ble Commission's approval for the replacement of 59 sets of lower and 59 sets of upper hangers of low-temperature superheater coils as capital spares to enhance the reliability of the plant, as per Regulation 36(1)(b) of the Tariff

Regulations 2024.

813. The estimated total spares cost is Rs. 2000 Lakh, proposed to be incurred as Rs. 9500 Lakh in FY 2024–25, Rs. 5500 Lakh in FY 2025–26 and Rs. 500 Lakh in FY 2026–27. We humbly request the Hon'ble Commission to approve this proposal in the interest of ensuring the plant's sustained reliability and performance.

xv. Procurement of Upgraded Coal burner Tip & Nozzle

814. It is submitted that the operation of coal burners in tangential fired boilers subjects them to significant wear and metallurgical failures. Several factors contribute to this wear, including the high ash content typically ranging from 35% to 40% and the specific chemical composition of the ash. The velocity at which the fuel-air mixture moves through the burners, the fineness of the coal particles (with 70% passing through a 200-mesh sieve) and the geometric design and material composition of the coal nozzles and tips also influence the burner's durability and performance.

815. At the generating station, failures in boiler tubes and coal nozzle tips have led to shutdowns, highlighting the critical need for proactive measures. The proposed procurement focuses on replacing the coal burner nozzles and tips to mitigate wear and improve overall performance. By doing so, the project aims to optimize coal combustion within the boiler, enhancing energy efficiency. This enhancement not only improves the utilization of coal but also contributes to the overall performance of the existing boiler system.

816. Furthermore, the improved burner technology ensures that the boiler operates efficiently even at partial loads, reducing energy wastage and enhancing operational flexibility.

817. Moreover, the upgraded components are expected to reduce boiler cycling,

thereby lowering stress on critical components such as water wall tubes. This reduction in cycling helps in prolonging the lifespan of the boiler and minimizing the frequency of maintenance interventions.

818. Ultimately, the project anticipates lowering maintenance costs associated with coal nozzle and tip replacements due to reduced wear. The procurement and installation of upgraded coal burners at the generating station represent a strategic initiative aimed at achieving higher operational efficiency, and cost-effectiveness. By addressing wear and metallurgical challenges comprehensively, the project supports the plant's objectives of sustainable energy production and reliability adherence in the power generation sector.

819. The estimated cost of the spare is Rs. 200 lakh in FY 2026-27 and Rs. 100 lakh in FY 2027-28. It is humbly requested before the Hon'ble Commission to approve the above expenditure under Regulations 36(1)(6) of the Tariff Regulations 2024.

xvi. Procurement of Sky Climber components and spares

820. Sky Climbers are essential components for accessing the entire front pass of the boilers during scheduled outage periods at the generating station. Since their initial supply by BHEL in 2011 the Petitioner has relied on two sets of Sky Climbers with 4 Hoists, for inspecting boiler pressure parts during annual maintenance over the past 12 years. However, due to continuous use over this period, many components of the existing Sky Climbers have suffered damage, necessitating regular repairs to ensure their functionality during outage periods.

821. Given that the Petitioner's generating station's boilers have been in continuous operation since 2011, frequent tube leakage issues in the water wall tubes necessitate thorough inspection and timely maintenance actions. To maintain operational efficiency and prevent Boiler Tube Leakage (BTL) conditions, it is

imperative to ensure that the Sky Climbers are maintained in a ready-to-use condition. This involves replacing damaged components and ensuring that both sets of Sky Climbers are fully operational for timely inspections and maintenance tasks during outage periods. Accordingly, the Petitioner proposed to replace the vulnerable and worn out component and spares for safe and efficient operation of sky climber.

822. The Sky Climbers which hang on and can go up and down with slings, play a crucial role in facilitating the inspection, rectification and replacement work on water wall tubes and other critical boiler components in a safe and efficient manner the photograph of sky climber is shown below:

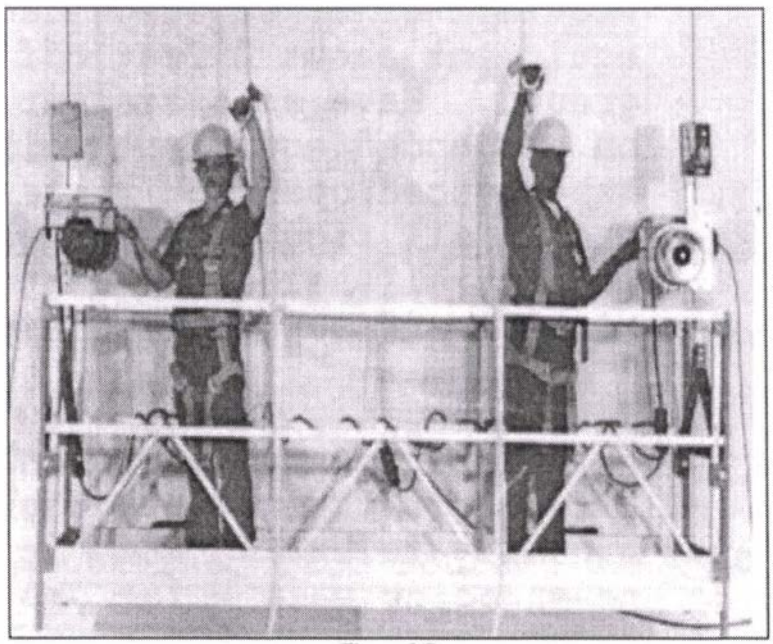

Fig 1 Pictorial Representation of SKYCLIMBER being used for inspection purpose

823. By maintaining these tools in optimal condition, the Petitioner can adhere to maintenance timelines and promptly address any defective tubes identified during inspections. This proactive approach is vital for minimizing downtime,

ensuring boiler reliability and preventing potential operational disruptions due to tube leaks. Therefore, securing the availability and readiness of Sky Climbers is essential for the Petitioner to uphold high standards of safety and operational efficiency during boiler maintenance activities. In this regard, reliance is placed on Report of Safety Audit dated 14th-15th June 2024 conducted by Competent Person notified by Chief Inspector of Factories [***Refer Annexure P/31-B***]

(S) Mechanical Integrity and specific job like working at height and confined space:

Observation	*Recommendation*
XXX	*XXX*
Sky Climber is required for internal inspection& maintenance of boilers and Inflatable Jack facilitates coil inspection coverage of larger area in less time Therefore, their proper functioning is to be maintained at any moment at site but provision is missing	***a) Some equipment like Sky climber need rectification as any operational malfunction may lead to serious injury. MPL team has been advised to properly maintain/replace equipment which are having high safety impact while doing maintenance jobs at site. b) The process of Boiler coil inspection by manual method is not advisable. Inflatable jacks & other safe pulling devices need to be used***

[***Emphasis Supplied***]

824. Accordingly, the Petitioner humbly requests the Hon'ble Commission to allow the above capital spares expenditure of Rs. 300 lakh under Regulation 36(1)(6) of the Tariff Regulations 2024.

xvii. ID Fan and VFD Transformer

825. It is submitted that at Petitioner's each Unit, there are 2 nos. of ID fan motor running in parallel. Both ID fan motors have dual channel winding to which power

is fed via separate LCI channels. The rated input voltage of LCI channels is 2.3 kV which is supplied via a separate service transformer of rating 3250 kVA. The total population of inservice VFD transformer are 8 nos. with no available spare.

826. At present, with 8 nos. VFD service transformers for Units 1 & 2, no spare or standby transformer is available and in the event of any failure of the service transformer, it will instantly lead to a reduction in Generation of a particular Unit as with one LCI channel in service an ID fan motor can be loaded up to 60% only. Hence, spare transformer availability needs to be ensured to reduce Generation Loss period and to ensure the smooth functioning of the plant without any unplanned shutdowns.

827. It is estimated that the Capital expenditure required for procurement and commissioning of this equipment is Rs. 100 lakh through an open tendering process and it will be executed in FY 2024-25 and FY 2025-26. Accordingly, the Petitioner humbly requests the Hon'ble Commission to allow the above additional capital spares expenditure under Regulation 36(1)(6) of the Tariff Regulations2024.

xviii. Replenishment of Capital Spares

828. The expenditure of Rs. 675.61 lakh for FY 2024-25 related to other Capital Spares Replenishment is provided in FORM 17 of the Tariff Formats and the same may kindly be referred for their break up and justifications.

Re. Total O&M Expanses for 2024-29

829. Pursuant to aforesaid Regulations and following the approach of the Hon'ble Commission, the O&M expenses claimed for the tariff for each year of the Tariff Period 2024-29 are as follows:

Table 50: Projected O&M Expenses for the period 2024-29 (Rs. lakh)

S. No.	Particulars	2019-20	2020-21	2021-22	2022-23	2023-24
1	**O&M expenses under Reg.36(1) (Rs. Lakh/ MW)**	27.17	28.60	30.10	31.68	33.34
1a	Normative	28528.50	30030.00	31605.00	33264.00	35007.00
2	**O&M expenses under Reg.36(6)**					
2a	Water Charges	3339.22	3673.15	4040.46	4456.68	4888.96
2b	Security expenses	1138.15	1245.99	1364.04	1493.28	1634.77
2c	Capital Spares	3565.46	1282.50	1917.67	1039.50	360.00

Re. INTEREST ON WORKING CAPITAL

830. Regulation 34 of Tariff Regulations 2024 provides as under:

> *"34. Interest on Working Capital:*
> *(1) The working capital shall cover:*
> *(a) For Coal-based/lignite-fired thermal generating stations:*
> *(i) Cost of coal or lignite, if applicable, for 10 days for pit-head generating stations and 20 days for non-pit-head generating stations for generation corresponding to the normative annual plant availability factor or the maximum coal/lignite stock storage capacity, whichever is lower;*
> *(ii) Limestone towards stock for 15 days corresponding to the normative annual plant availability.*
> *(iii) Advance payment for 30 days towards the cost of coal or lignite and limestone for generation corresponding to the normative annual plant availability factor;*
> *(iv) Cost of secondary fuel oil for two months for generation corresponding to the normative annual plant availability factor, and in case of use of more than one secondary fuel oil, cost of fuel oil stock for the main secondary fuel oil;*
> *(v) Maintenance spares @ 20% of operation and maintenance expenses,*

including water charges and security expenses;

(vi) Receivables equivalent to 45 days of capacity charge and energy charge for the sale of electricity calculated on the normative annual plant availability factor; and

(vii) Operation and maintenance expenses, including water charges and security expenses, for one month.

.....

(2) The cost of fuel in cases covered under sub-clauses (a) and (c) of clause (1) of this Regulation shall be based on the landed fuel cost (taking into account normative transit and handling losses in terms of Regulation 59 of these regulations) by the generating station and gross calorific value of the fuel as per actual weighted average for the preceding financial year in case of each financial year for which tariff is to be determined:

Provided that in the case of a new generating station, the cost of fuel for the first financial year shall be considered based on landed fuel cost (taking into account normative transit and handling losses in terms of Regulation 59 of these regulations) and gross calorific value of the fuel as per actual weighted average for three months, as used for infirm power, preceding date of commercial operation for which tariff is to be determined.

(3) Rate of interest on working capital shall be on a normative basis and shall be considered at the Reference Rate of Interest as on 1.4.2024 or as on 1st April of the year during the tariff period 2024- 29 in which the generating station or a unit thereof or the transmission system including communication system or element thereof, as the case may be, is declared under commercial operation, whichever is later:

Provided that in case of truing-up, the rate of interest on working capital shall be considered at Reference Rate of Interest as on 1st April of each of the financial year during the tariff period 2024-29.

(4) Interest on working capital shall be payable on a normative basis, notwithstanding that the generating company or the transmission licensee has not taken a loan for working capital from any outside agency."

831. The Interest on Working Capital for Tariff Period 2024-29 for the purpose of determination is shown in the Table below. It may kindly be noted that the Petitioner has considered the Operational Norms as proposed in Form-3 of the Tariff Forms and Fuel Parameters of FY 2023-24 in terms of Regulation 34(2) of Tariff Regulations 2024 for each year of the Tariff Period 2024-29. However, in terms of Regulation 34(2), the actual weighted average cost of fuel and gross

calorific value of the fuel for the preceding financial year shall be provided at the time of truing-up for these years.

Table 51: Proposed Interest on Working Capital of Generating Station during Tariff Period 2024-29 (Rs. Lakh)

S. No.	Particulars	2024-25	2025-26	2026-27	2027-28	2028-29
1	Cost of Coal/Lignite	28404.59	28404.59	28404.59	28404.59	28404.59
2	Cost of Main Secondary Fuel Oil	403.61	403.61	403.61	403.61	403.61
3	O & M Expenses for 1 month	2750.49	2912.43	3084.13	3267.83	3460.89
4	Maintenance Spares @20% of O&M	6601.18	6989.83	7401.90	7842.79	8306.15
5	Receivables - 45 days	39303.61	39337.06	39659.50	40032.19	40113.54
6	Total Working Capital	77463.47	78047.51	78953.72	79951.01	80688.78
7	Rate of Interest	11.90%	11.90%	11.90%	11.90%	11.90%
8	**Interest on Working Capital**	**9218.15**	**9287.65**	**9395.49**	**9514.17**	**9601.97**

Re. OPERATIONAL NORMS

832. It is submitted that the Tariff Regulations 2024 stipulate various Operational Norms for Units of different capacities, and the recovery of Capacity Charges & Energy Charges are subject to the successful achievement of these Norms. The Petitioner has projected its Operational Parameters as defined in the Tariff Regulations 2024 and in accordance with its submissions hereunder. The following Sub-Section details the projected Operational Performance of the

Generating Station during the Tariff Period 2024-29.

Re. Plant Availability

833. Regulation 70 (A) of Tariff Regulations 2024 specifies the Normative Plant Availability as:

"Norms of operation for thermal generating station

70. The norms of operation as given hereunder shall apply to thermal generating stations:

(A) Normative Annual Plant Availability Factor (NAPAF)

(a) 85% for all thermal generating stations, except those covered under clauses (b), (c), (d), & (e);"

834. The Petitioner for the purpose of instant Petition has computed Gross Generation for the Tariff Period of 2024-29 at Normative Availability of 85% in line with the norms.

Re. Generation

835. The computation of Gross Generation is based on Availability, i.e., it is assumed that all the Capacity that is available in a particular time block would be dispatched. In short, the Plant Load Factor ("**PLF**") would be equal to the Availability and the computation of Gross Generation is based on such PLF. Based on the projected Normative Annual Plant Availability at 85%.

Re. Auxiliary Power Consumption

836. Norms of operation for thermal generating station

"70. The norms of operation as given hereunder shall apply to thermal generating stations:

...

(E) Auxiliary Energy Consumption:

(a) For Coal-based generating stations except at (b) below:

S. No.	***Generating Station***	***With natural Draft cooling tower or without cooling tower***
(i)	*200-300 MW series*	*8.50%*
(ii)	*500 MW and above*	
	Steam driven boiler feed pumps	*5.25%*
	Electrically driven boiler feed	*8.00%*

S. No.	Generating Station	With natural Draft cooling tower or without cooling tower
	pumps	
(iii)	*600MW and above*	
	Steam driven boiler feed pumps	*5.25%*
	Electrically driven boiler feed pumps	*8.00%*

Provided that for thermal generating stations with induced draft cooling towers and where tube type coal mill is used, the norms shall be further increased by 0.5% and 0.8% respectively"

837. Unit 1 & Unit 2 of the Generating Station fall under the category of 500 MW & above having Steam-driven Boiler Feed Pumps & Induced Draft Cooling Tower. Therefore, both Units qualify for a Normative Auxiliary Power Consumption of 5.75% (5.25% for Units having Steam driven BFP & additional 0.50% for having Induced Draft Cooling Tower).

Re. Gross Station Heat Rate

838. Regulation 70(C)(b) of the Tariff Regulations 2024 provides the station Heat Rate for the thermal generating station having COD on or after 1.4.2009 as under:

"70 (C)...
(b) Thermal Generating Stations achieving COD on or after 1.4.2009
(i) For Coal-based and lignite-fired Thermal Generating Stations:

For 200-300 MW Sets : 1.05 × Design Heat Rate (kCal/kWh)
For 500 MW Sets and above : 1.045 × Design Heat Rate (kCal/kWh)

Where the Design Heat Rate of a generating unit means the unit heat rate guaranteed by the supplier at conditions of 100% MCR, zero percent make up, design coal and design cooling water temperature/back pressure."

839. The Gross Station Heat Rate of 2363.40 kCal/kWh (1.045x1945/0.86) has been considered for the generating station for the Tariff Period 2024-29. The Petitioner has considered the boiler efficiency of 86% as the quality of coal received remains

suboptimal and with the Turbine Heat Rate of 1945 kCal/kWh in accordance with Regulation 70(C)(b)(i) read with Regulation 102 of the Tariff Regulations 2024.

840. With regard to poor quality of the coal received at the Petitioner's Generating Station, a detailed explanation has been provided in Section dealing with Heat Rate under Operational Norms of Tariff Period 2019-24. The Petitioner humbly requests this Hon'ble Commission to kindly refer to the above section for the detailed justification and the same has not been repeated here for brevity.

841. The Petitioner respectfully submits that in view of the above submissions, it shall be appropriate to allow Station Heat Rate of 2363.40 Kcal/ kWh for the period 2024-29 by considering boiler efficiency as 86% similar to other generators and providing level playing field, as the actual SHR is higher for the reasons beyond the control of the Petitioner under Power To Relax as per Regulation 102 of Tariff Regulation 2024.

Re. Fuel Parameters for the Tariff Period 2024-29

842. This Section explains the components of projected Fuel Parameters to be considered for arriving at the initial Base Values of GCV of Coal, Base Price of Coal and Secondary Fuel as prescribed in Tariff Regulations 2024. Regulation 34(2) of Tariff Regulations 2024 reproduced below specifies the guidelines for arriving at the initial Landed Prices (of Coal & Secondary Fuel) and initial projection of GCV of Coal:

> *"34. Interest on Working Capital:*
> *(2) The cost of fuel in cases covered under sub-clauses (a) and (c) of clause (1) of this Regulation shall be based on the landed fuel cost (taking into account normative transit and handling losses in terms of Regulation 59 of these regulations) by the generating station and gross calorific value of the fuel as per actual weighted average for the preceding financial year in case of each financial year for which tariff is to be determined: "*

843. Accordingly, the Base Landed Price of Coal has been computed based on the Weighted Average Landed Price of Coal for the period April 2023 to March 2024 applicable for 2024-29. Similarly, the Landed Price of Oil has been computed based on the Weighted Average Landed Price of Oil for April 2023 to March 2024.

844. In view of the above, the Landed Price of Coal & Oil and GCV of Coal & Oil are presented in the following Table:

Table 52: Summary of Fuel Parameters for Tariff Period 2024-29

Particulars	UoM	FY25	FY26	FY27	FY28	FY29
Wtd. Avg. Price of Coal	Rs. /MT	4,446.76	4,446.76	4,446.76	4,446.76	4,446.76
Wtd. Avg. "As Received" GCV of Coal less 85 kCal/kg	kCal/Kg	3,954.99	3,954.99	3,954.99	3,954.99	3,954.99
Wtd. Avg. Price of Oil	Rs. /kL	61948.38	61948.38	61948.38	61948.38	61948.38
Wtd. Avg. GCV of Oil	kCal/L	9,100.00	9,100.00	9,100.00	9,100.00	9,100.00

845. The Petitioner humbly prays that the Hon'ble Commission may kindly approve the projected Fuel Parameters of the Generating Station for the Tariff Period 2024-29 as given in the above Table.

Re. Summary of Operational Parameters

846. The summary of the projected Operational Performance of the Generating Station for the period 2024-29 is as under:

Table 53: Summary of Operational Parameters for Tariff Period 2024-29

Particulars	UoM	FY 25	FY 26	FY 27	FY 28	FY 29
No. of Days in the Year	Days	365.00	365.00	365.00	366.00	365.00
Unit Capacity	MW	1050	1050	1050	1050	1050

NAPAF	%	85%	85%	85%	85%	85%
SHR	Kcal/kWh	2363.40	2363.40	2363.40	2363.40	2363.40
Auxiliary Power Consumption	%	5.75%	5.75%	5.75%	5.75%	5.75%
Sp Secondary Fuel Oil Consumption	ml/kwh	0.5	0.5	0.5	0.5	0.5
Gross Generation at NAPAF	MU	7818.30	7818.30	7818.30	7839.72	7818.30

847. The Petitioner humbly prays that the Hon'ble Commission may kindly approve the projected Opertional Parameters of the Generating Station for the Tariff Period 2024-29 as given in the above Table.

Re. Summary of Annual Fixed Charges

848. Based on the above submissions the Petitioner has computed the Annual Fixed Charges. The Hon'ble Commission is requested to allow the same shown as below:

Table 54: Proposed Annual Fixed Charges for the Period 2024-29 (Rs. Lakh)

Particulars	**2024-25**	**2025-26**	**2026-27**	**2027-28**	**2028-29**
Depreciation	16507.85	17189.94	17797.66	18873.71	20066.93
Interest on Loan	8855.54	7916.25	6801.23	5899.73	4841.27
Return of Equity	31993.97	32412.00	32731.28	33235.97	33712.01
Interest on Working Capital	9218.15	9287.65	9395.49	9514.17	9601.97
O&M Expenses	42445.27	42486.26	45181.79	46832.09	47368.09

Particulars	2024-25	2025-26	2026-27	2027-28	2028-29
AFC	109020.79	109292.10	111907.45	114355.67	115590.26

RE. ADDITIONAL CHARGES FOR THE TARIFF PERIOD 2024-29

849. The Annual Fixed Charges for the Tariff Period 2024-29 shall comprise of the components discussed above and also the additional charges as mentioned below:

(a) Tariff Application Fees & Publication Expenses: -

(b) Fees & Charges for Load Dispatch Centre

850. **Tariff Application Fees & Publication Expenses:**

(a) Regulation 3 of CERC (Payment of Fees) Regulations 2012 stipulates the Tariff Application Fees as follows.

> *"3. **Fee for Application for Determination of Tariff...***
> *(1) An application for determination of tariff of a generating station or a unit thereof, shall be accompanied by a fee payable at the rate of Rs 4000/MW/annum and Rs 4400/MW/annum for the years 2012-13 and 2013-14, respectively corresponding to the installed capacity of such generating station or unit thereof:*
> *Provided that the fee specified in this regulation shall be paid for the first year, corresponding to the installed capacity of the generating station or a unit thereof, while making the application for determination of tariff and thereafter annually at the specified rates by 30th April of each year:*
> *Provided further that where the fee for the tariff period 2009-14 in respect of the generating station or unit thereof has already been paid in accordance with the Central Electricity Regulatory Commission (Payment of Fees) Regulations, 2008, the generating company shall pay the balance fee as per the rate specified in this regulation."*

851. **Fees & Charges for Regional Load Despatch Centre**

(a) Regulation 94(3) of Tariff Regulations 2024 allows recovery of Fees and Charges of Regional Load Despatch Centre ("**RLDC**") directly from the Beneficiaries as specified above. However, the recovery of the actual Fees and Charges for the period during the Tariff Period 2024-29 shall be based

upon the Annual Charges determined by the Hon'ble Commission for each RLDC. Such Annual Charges are recovered by the concerned RLDC through the System Operation Charges applicable for the Inter-state Transmission Licensees as stipulated in CERC (Fees and Charges of Regional Load Despatch Centre and other related matters) Regulations, 2009. Since such Annual Charges of the RLDCs for 2024-29 (including any adjustment for 2019-24)are yet to be finalized by the Hon'ble Commission, the Petitioner is unable to include such charges in the projected Annual Fixed Charges for Tariff Period 2024-29, for the Generating Station and, therefore, proposes to recover the same from the Beneficiaries at actual being billed by the concerned RLDC during the period 2024-29.

B.III. FINAL CLAIMS MADE IN THE PETITION

852. The claims made by the Petitioner pertaining to the Annual Fixed Charges are delineated hereunder in tabulated form.

Re. Annual Fixed Charges claimed for 2019-24 and 2024-29 is as follows:

Table 4: Annual Fixed Charges claimed for the period 2019-24 (Rs. lakh)

Particular	2019-20	2020-21	2021-22	2022-23	2023-24
Depreciation	23564.71	23678.33	25256.89	27271.52	27773.39
Interest on Loan	13292.43	11086.83	10855.94	11535.36	10450.13
Return on Equity	27064.28	27175.33	29346.67	31543.12	31689.17
Interest on Working Capital	8964.43	7999.84	7225.41	7831.82	9131.21
O&M Expenses	29224.98	31407.51	32679.97	35496.78	37451.36
AFC	**102110.83**	**101347.86**	**105364.88**	**113678.60**	**116495.25**

MAITHON POWER LIMITED

Table 5: Annual Fixed Charges claimed for the period 2024-29 (Rs. lakh)

Particulars	2024-25	2025-26	2026-27	2027-28	2028-29
Depreciation	16507.85	17189.94	17797.66	18873.71	20066.93
Interest on Loan	8855.54	7916.25	6801.23	5899.73	4841.27
Return of Equity	31993.97	32412.00	32731.28	33235.97	33712.01
Interest on Working Capital	9218.15	9287.65	9395.49	9514.17	9601.97
O&M Expenses	42445.27	42486.26	45181.79	46832.09	47368.09
AFC	**109020.79**	**109292.10**	**111907.45**	**114355.67**	**115590.26**

853. Notably, the duly filled tariff forms as prescribed by the Hon'ble Commission for 2019-24 Tariff Period and 2024-29 Tariff Period have been annexed in the present petition as *ANNEXURE P/2 and ANNEXURE P/3*, respectively.

Further, the audited financial statements for each of the Financial years during 2019-24 Tariff Period are enclosed as *ANNEXURE P/4.*

C. LIMITATION

854. It is humbly submitted that the Petitioner is approaching this Hon'ble Commission at the first instance. Further, the present petition has been filed for the approval of the revised tariff of MPL for the tariff period 2019-24 as per provision of Regulation 13 of Tariff Regulations 2019 and has been filed in accordance with Regulation 9(4) of the Tariff Regulations, 2024.

855. Furthermore, as per Regulation 13 (2) of the Tariff Regulations, 2019 the limitation for filing application for carrying out true-up exercise is up to 31.11.2024. The relevant provision is extracted hereunder:

> *"(2) The generating company or the transmission licensee, as the case may be, shall make an application, as per Annexure-I to these regulations, for carrying out truing up exercise in respect of the generating station or a unit thereof or the transmission system or an element thereof by 30.11.2024."*

856. Subsequently, this Hon'ble Commission in Order dated 28.11.2024 passed in Petition No. 443/MP/2024 has *inter-alia* directed and held that the tariff petitions of the existing assets for the truing-up of the tariff of the 2019-24 tariff period and the determination of tariff for the 2024-29 period may be filed by the Petitioner by 28.02.2025 where final orders for the 2019-24 tariff period have already been issued till 31.03.2024.

857. Thus, in terms of the above, it is evident that the present tariff Petition for true-up of 2019-24 and tariff determination for 2024-29 has been filed well within the limitation period.

858. The Petitioner craves leave of this Hon'ble Commission to file further documents as may be or if and so required in support of its claims or so directed by this Hon'ble Commission.

859. It is submitted that in case any of the matters (pending before various forums like Hon'ble Appellate Tribunal for Electricity or Hon'ble Supreme Court) related to the determination of tariff of the generation assets of Petitioner is decided before the issuance of tariff for the present Petition, this Hon'ble Commission is requested to consider/implement the outcome of the same in the present petition.

860. In the event of order(s) being declared after the pronouncement of the order by the Hon'ble Commission in the present petition, it is submitted that the impact of the same be allowed as soon as possible. This suggested approach as stated above shall be in Petitioner's and in the Purchaser's interest since it will avoid any delays caused in giving timely effect to Judgement(s) of the Hon'ble Commission/superior court and reduction in grant of carrying costs to Petitioner or beneficiaries.

D. PRAYERS

861. In view of the above submission, the Petitioner respectfully prays that the Hon'ble Commission may kindly be pleased to:

(a) Approve the Trued Up Generation Tariff for the Tariff Period 2019-24;

(b) Determine the Generation Tariff for the Tariff Period 2024-29;

(c) Allow recovery of the Petitioner's claim against additional capital expenditure as prayed in the Petition;

(d) Allow relaxation of SHR for the Generating Station, as prayed for, in exercise of 'Power to Relax' under Regulation 76 of the Tariff Regulations 2019 and under Regulation 102 of Tariff Regulations 2024;

(e) Allow the recovery of filing fees paid to the Hon'ble Commission and recovery of publication expenses from the beneficiaries, in accordance with Regulation 70 of the Tariff Regulations 2019 and Regulation 94 of the Tariff Regulations 2024;

(f) Allow recovery of fees and charges for RLDC at actuals being billed by the concerned RLDC during 2024-29;

(g) Grant liberty to the Petitioner to claim the Normative IDC for 2024-29 at the time of truing-up;

(h) Grant liberty to the Petitioner to approach the Hon'ble Commission regarding the claims pertaining to FGD/NOX as and when the same are commissioned by the Petitioner;

(i) Condone any inadvertent omissions, errors, short comings and permit the Petitioner to add/ change/ modify/ alter this filing and make further submissions as may be required at a future date; and

(j) Pass such other and further Orders as deemed fit and proper in the facts and circumstances of the case.

E. TARIFF FILING FORMS

Tariff filing forms along with the checklist of the same is submitted with the present Petition which is in accordance with the applicable regulations i.e., Tariff Regulations, 2024.

F. ANNEXURE

As per Index

G. PROOF OF PAYMENT OF FEES FOR FILING OF THE PETITION

Unique Online Payment Transaction Number Transaction Nos. given in fee form

Dated at New Delhi, on this 26th day of February, 2025.

ORDER

The Petitioner, Maithon Power Ltd (in short 'MPL') is a public limited company incorporated on 26.7.2000 under the provisions of the Companies Act, 1956. MPL is a joint venture between Tata Power Trading Company Ltd. (TPTCL) with an equity participation of 74% and Damodar Valley Corporation (DVC) with an equity participation of the remaining 26%. Maithon Right Bank Power Project (1050 MW) (hereinafter referred to as 'the generating station') of the Petitioner is situated in the Dhanbad District of the State of Jharkhand and is envisaged as a Mega Power Project in terms of the Ministry of Finance, Govt. of India Notification No. 63/99 dated 13.5.1999 and Notification no.100/99-Customs dated 28.7.1999. The actual date of commercial operation (COD) of Unit-I of the generating station is 1.9.2011 and the COD of Unit-II/generating station is 24.7.2012.

Background

2. Petition No. 274/2010 was filed by the Petitioner for determination of tariff of the generating station from COD of Unit-I (1.9.2011) and Unit-II (24.7.2012) till 31.3.2014 and the Commission vide its order dated 19.11.2014 determined the tariff for the said period, based on the capital cost of Rs.244839 lakh (as on 1.9.2011) and Rs.137002 lakh (as on 24.7.2012). Against this order dated 19.11.2014, the Petitioner filed Appeal No. 48/2015 before the Appellate Tribunal for Electricity (APTEL) and the same was disposed of by judgment dated 10.5.2016. Against this judgment, the Petitioner filed Review Petition (RP No. 16/2016) before APTEL and by order dated 10.10.2017, the APTEL upheld its judgment dated 10.5.2016 in

Appeal No.48/2015. During the pendency of the said appeal, Petition No. 152/GT/2015 was filed by the Petitioner for truing-up of tariff for the 2009-14 tariff period and for determination of tariff of the generating station for the 2014-19 tariff period. Meanwhile, Petition No. 72/MP/2016 was also filed by the Petitioner seeking in-principle approval of the "Abstract Schemes" of capital expenditure in compliance with Environment (Protection) Amendment Rules, 2015 issued by the Ministry of Environment, Forest and Climate Change (in short 'MOEF & CC') dated 7.12.2015 and the Commission vide its order dated 20.3.2017 in Petition No. 72/MP/2016 disposed of the same as under:

> *"10. Since, the 2014 Tariff Regulations do not provide for the grant of in-principle approval for the capital expenditure, the prayer of the petitioner for in-principle approval of the Abstract scheme of capital expenditure by relaxing the provisions of the tariff regulations through invoking Regulation 54 of 2014 Tariff Regulations, is not maintainable. In our view, since, the implementation of new norms in the existing and under construction thermal generating stations would require modification of their existing system and installation of new systems such as Retro-fitting of additional fields in ESP/replacement of ESP, etc. to meet Suspended Particulate Matter norms, installation of FGD system to control SOx and Selective Catalytic Reduction (SCR) systems for DeNox, the petitioner is directed to approach the Central Electricity Authority to decide specific optimum technology, associated cost and major issues to be faced in installation of different system like SCR, etc. The petitioner is also directed to take up the matter with the Ministry of Environment and Forest for phasing of the implementation of the different environmental measures. Accordingly, the petitioner is granted liberty to file appropriate petition at an appropriate stage based on approval of CEA and direction of MoEF which shall be dealt with in accordance with law."*

3. Subsequently, the Commission by order dated 26.12.2017 in Petition No.152/GT/2015, trued up the tariff of the generating station for the 2009-14 tariff period and determined tariff for the 2014-19 tariff period. In the said order, an amount of Rs.160 crore towards Liquidated Damages (LD) was deducted from the capital cost, till such time the Petitioner furnished details of LD settlement. Against this order, the Petitioner filed Review Petition (Petition No.16/RP/2018) on the following issues:

> *"a) Disallowance of 1% of additional interest rate for computing the Interest During Construction and Interest on Loan for the period 2011-14 to recover fully the interest cost with actual weighted average;*

b) *Weighted average depreciation rate for the entire generating station as shown in Form-11 and accordingly, revise the depreciation on the fixed assets for the period 2014 -19 and grant consequential relief;*

c) *Billing as 'on received' basis at unloading point through hydraulic augur or manually;*

d) *Allow ash disposal expenses for the period 2014-19; and*

e) *Non-consideration of reimbursement of refinancing cost and financing charges.*"

4. Thereafter, the Commission vide its order dated 25.4.2019, disposed of the review petition (Petition No.16/RP/2018) rejecting the prayer (a) above, while allowing the other prayers (b) to (e) above. However, while allowing prayers (b) and (d), the Commission in the said order dated 25.4.2019 observed that these issues would be considered at the time of truing-up of tariff for the 2014-19 tariff period. Subsequently, by corrigendum order dated 25.4.2019, certain clerical errors in Commission's order dated 25.4.2019 in Petition No.16/RP/2018 were corrected. Against the Commission's order dated 25.4.2019 in Petition No.16/RP/2018, the Petitioner has filed appeal (Appeal No. 405/2019) before APTEL and the same is pending.

5. The Petitioner had also filed Petition No. 285/MP/2018 for inclusion of LD amount of Rs.160 crore deducted from the capital cost (*in terms of Commission's order dated 26.12.2017 in Petition No. 152/GT/2015*) and for re-computation of tariff for the tariff periods 2009-14 and 2014-19 and the Commission by order dated 17.7.2019 disposed of the same, as under:

> *"22. In view of the above, the total expected LD amount of `160 crore which was deducted from the capital cost vide Commission's order dated 26.12.2017 in Petition No. 152/GT/2015 is allowed to be included in the capital cost of the generating station. Consequently, the impact due to inclusion of the said LD amount in the capital cost shall be worked out and tariff of the generating station for the period 2011-14 and 2014-19 shall be revised by a separate order in Petition No. 152/GT/2015. We decide accordingly"*

6. In terms of the above order, the Commission vide its order dated 1.10.2019 in Petition No.152/GT/2015, revised the annual fixed charges of the generating station for the 2009-14 and 2014-19 tariff periods, as under:

For the 2009-14 tariff period

(Rs. in lakh)

	1.9.2011 to 31.3.2012	**1.4.2012 to 23.7.2012**	**24.7.2012 to 31.3.2013**	**1.4.2013 to 31.3.2014**

Total	**99154.50**	**106314.26**	**107868.34**	**106552.83**	**111287.93**

7. Thereafter, the Petitioner, based on the response of CEA and MOEF&CC and in terms of the liberty granted by the order dated 20.3.2017 in Petition No. 72/MP/2016 (*refer paragraph 2 above*), filed Petition No.152/MP/2019, seeking amongst others, a declaration that the MOEF&CC Notification dated 7.12.2015 and its letter dated 11.12.2017 are 'change in law' events and also for the grant of 'in-principle' approval of the expenditure towards installation of FGD system for meeting the revised emission norms of SO_2. By order dated 11.11.2019, the Commission disposed of prayers (a) to (h) in Petition No.152/MP/2019 as extracted below:

> *"16……..Considering the fact that the expenditure shall be incurred during next tariff period commencing from 1.4.2019, prayer of the petitioner is to be dealt under the provisions of 2019, Tariff Regulations pertaining to additional capital expenditure. As per*

Regulation 29 of 2019, Tariff Regulations, the additional capital expenditure to be incurred on account of revised emission standards has been recognized separately. In light of the above explicit Regulation pertaining to the additional capital expenditure on new environment standards, it is not required to invoke the provision of Change in Law as per the 2019, Tariff Regulations. Accordingly, prayer (b) of the petitioner disposed in terms of above

..The petitioner has already informed the beneficiaries about the estimated expenditure which exceeds the limit of Rs.100 crore specified under the Regulation. As such, the proposed expenditure on FGD is squarely covered within the Regulation 11 of the 2019 Tariff Regulations. Accordingly, it is held that proposed expenditure qualifies for the In-principle approval, subject to further scrutiny of the proposed expenditure

29. In view of the above, the Commission accords In-principle approval to the petitioner for following cost:

xxx

The Commission allows the petitioner to claim IDC, IEDC, Taxes and opportunity cost at actuals which may be allowed after prudence check in accordance with the 2019, Tariff Regulations.

30. Accordingly, prayer (c) and (d) of the petitioner are disposed in terms of above

35. The norms for additional O&M expenses would be finalized by CERC. Accordingly, the claim of the petitioner for allowing O&M expenditure is not being considered at this stage. We direct the petitioner to submit the O&M expenses relating to FGD system on actual basis at the time of filling the petition for determination of tariff on commissioning of the FGD system.

38. As regards the exclusion of the shutdown period for calculation of availability for recovery of fixed charges, Commission has already taken a view that the generator in consultation with beneficiaries would plan to synchronize the interconnection of FGD with the annual overhaul so as to minimize the additional downtime required for FGD interconnection. Accordingly, Petitioner is directed to schedule the shutdown period prudently to avoid the impact on availability. However, if shutdown period for FGD integration exceeds the period of annual overhauling, the petitioner has liberty to claim the same at the time of tariff determination. Accordingly, prayer (e) and (f) of the petitioner is disposed in terms of above.

xxx

40. As per Clause (2) of the Regulation 14 of the 2019 Tariff Regulations, the Commission has already specified the regulatory framework for determination of supplementary tariff inter-alia provides supplementary capacity charges and supplementary energy charges. This regulation is effective for 2019-24 tariff period. The Commission will determine this supplementary tariff on submission of application by the petitioner after installation of FGD. As such, state/beneficiaries may decide merit order dispatch while scheduling the plants. Accordingly, prayer (g) of the petitioner is disposed in terms of above.

41……..Further, in Petition no. 92/MP/2015 dated 08.03.2019, the Commission has clarified as under:

"xxxxx

In view of the above, the Petitioner may seek appropriate remedy in case the Petitioner relinquishes LTA due to additional APC. Accordingly, prayer (h) of the petitioner is disposed in terms of above."

8. It is noticed that the opening capital cost of Rs.432039.88 lakh claimed by the Petitioner as on 1.4.2014 is at variance with the capital cost of Rs.432490.69 lakh as allowed vide order dated 1.10.2019 in Petition No. 152/GT/2015. In this regard, the Petitioner has clarified as under:

> *"Capital cost of ₹432490.69 lakh as on 1.4.2014 in order dated 26.12.2017 was approved based on admitted capital cost of 31.3.2014 in true up of tariff for 2009-14 tariff period. However, while reporting de-capitalization of assets during the 2012-13 and 2013-14 in the true-up of tariff for 2009-14, the Petitioner had inadvertently missed to exclude small de-capitalizations towards few minor assets. This omission of de-capitalization is worked out by the Petitioner as ₹450.81 lakh and is corrected in the opening value of 2014-15 i.e. (₹432490.69 lakh – 450.81 lakh) for the purpose of Tariff determination."*

9. Admittedly, the capital cost of Rs.432490.69 lakh as on 31.3.2014 (the same capital cost was considered as opening capital cost as on 1.4.2014 for determination of tariff for the 2014-19 tariff period), approved vide order dated 1.10.2019 in Petition No.152/GT2015, is without considering the de-capitalization of certain amounts for 2012-13 and 2013-14, which the Petitioner had failed to furnish at the time of truing up of tariff for the 2009-14 tariff period. Since the Petitioner, in the present petition, has submitted that there is de-capitalization of Rs.450.81 lakh for 2012-13 and 2013-14, the opening capital cost for the 2014-19 period stands revised to Rs.432039.88 lakh as on 31.3.2014, instead of Rs.432490.69 lakh as approved vide order dated 1.10.2019 in Petition No. 152/GT/2015. Here, we would like to point out that even though tariff for the 2009-14 tariff period has been trued up earlier for the generating station, the downward revision (on account of decapitalization of Rs. 450.81 lakh) in the capital cost is allowed, keeping in view the interest of consumers and tariff is modified accordingly.

Tariff for the 2009-14 tariff period

10. As discussed above, the de-capitalization of Rs.450.81 lakh for 2012-13 and 2013-14 has been allowed and based on the downward revision in capital cost, the

annual fixed charges for the period from 1.9.2011 to 31.3.2014 in order dated 1.10.2019 in Petition No.152/GT/2015 stands modified as under:

(Rs. in lakh)

	1.9.2011 to 31.3.2012	1.4.2012 to 23.7.2012	24.7.2012 to 31.3.2013	2013-14
Total annual fixed charges allowed in order dated 1.10.2019	33660.10	18522.83	68213.37	108896.58
Total annual fixed charges allowed in this order	33660.10	18522.83	68199.83	108896.58

11. The difference between the annual fixed charges recovered by the Petitioner in terms of the order dated 26.12.2017 read with order dated 1.10.2019 in Petition No.152/GT/2015 and the annual fixed charges determined by this order shall be adjusted in terms of Regulation 6(4) of the 2009 Tariff Regulations.

TARIFF FOR THE 2014-19 TARIFF PERIOD (PRESENT PETITION)

12. The present petition has been filed by the Petitioner for truing-up of tariff of the generating station for the 2014-19 tariff period, in terms of Regulation 8 of the 2014 Tariff Regulations and for determination of tariff of the generating station for the 2019-24 tariff period, in accordance with the provisions of the 2019 Tariff Regulations. We proceed to examine the claims of the Petitioner in the present petition as stated in the subsequent paragraphs.

13. The capital cost allowed vide order dated 1.10.2019 in Petition No. 152/GT/2015 for the 2014-19 tariff period is as under:

Capital cost allowed

(Rs. in lakh)

	2014-15	2015-16	2016-17	2017-18	2018-19
Opening Gross Block	432490.69	458448.69	467564.69	467564.69	467564.69
Addition due to Projected additional capitalization	25958.00	9116.00	0.00	0.00	0.00
Closing Gross Block	458448.69	467564.69	467564.69	467564.69	467564.69

14. The capital cost and the annual fixed charges claimed by the Petitioner for the 2014-19 tariff period are as under:

Capital Cost claimed

(Rs. in lakh)

	2014-15	2015-16	2016-17	2017-18	2018-19
Opening Capital Cost	432039.88	465178.28	480597.95	481368.32	483304.48
Add: Additions during the year/ period	34679.91	14992.72	1029.48	2213.78	4380.74

15. The Respondent No.3, Kerala State Electricity Board Limited (KSEBL) has filed its reply vide affidavit dated 17.6.2020 and the Petitioner has filed its rejoinder to

the said reply vide affidavit dated 24.7.2020. The matter was heard on 2.6.2020 and the Commission vide Record of the Proceedings (ROP) directed the Petitioner to submit certain additional information and reserved its order. In response, the Petitioner vide affidavit dated 3.7.2020 has filed the additional information and has served copies of the same on the Respondents. Taking into consideration the submissions of the parties and the documents available on record, we examine the claims of the Petitioner for the 2014-19 tariff period, on prudence check, as stated in the subsequent paragraphs.

Capital Cost

16. Regulation 9(3) of the 2014 Tariff Regulations provides as under:

> *"9 (3) The Capital cost of an existing project shall include the following:*
> *(a) the capital cost admitted by the Commission prior to 1.4.2014 duly trued up by excluding liability, if any, as on 1.4.2014;*
> *(b) additional capitalization and de-capitalization for the respective year of tariff as determined in accordance with Regulation 14; and*
> *(c) expenditure on account of renovation and modernization as admitted by this Commission in accordance with Regulation 15."*

17. We have, in paragraph 9 of this order, allowed the revision of the capital cost of the generating station to Rs.432039.88 lakh as on 31.3.2014, after considering the de-capitalization of certain amounts by the Petitioner for 2012-13 and 2013-14. Accordingly, in terms of Regulation 9(3)(a) of the 2014 Tariff Regulations, the closing capital cost of Rs.432039.88 lakh as on 31.3.2014, has been considered as the opening capital cost as on 1.4.2014**.**

Additional Capital Expenditure

18. Regulations 14(1) and 14(3) of the 2014 Tariff Regulations provide as under:

> "*14. Additional capitalization and De-capitalization:*
> *(1) The capital expenditure in respect of the new project or an existing project incurred or projected to be incurred, on the following counts within the original scope of work, after the date of commercial operation and up to the cut-off date may be admitted by the Commission, subject to prudence check:*

(i) Un-discharged liabilities recognized to be payable at a future date;

(ii) Works deferred for execution;

(iii) Procurement of initial capital spares within the original scope of work, in accordance with the provisions of Regulation 13;

(iv) Liabilities to meet award of arbitration or for compliance of the order or decree of a court of law; and

(v) Change in law or compliance of any existing law:

Provided that the details of works asset wise/work wise included in the original scope of work along with estimates of expenditure, liabilities recognized to be payable at a future date and the works deferred for execution shall be submitted along with the application for determination of tariff

(2) xxxx

(3) The capital expenditure, in respect of existing generating station or the transmission system including communication system, incurred or projected to be incurred on the following counts after the cut-off date, may be admitted by the Commission, subject to prudence check:

(i) Liabilities to meet award of arbitration or for compliance of the order or decree of a court of law;

(ii) Change in law or compliance of any existing law;

(iii) Any expenses to be incurred on account of need for higher security and safety of the plant as advised or directed by appropriate Government Agencies of statutory authorities responsible for national security/internal security;

(iv) Deferred works relating to ash pond or ash handling system in the original scope of work;

(v) Any liability for works executed prior to the cut-off date, after prudence check of the details of such un-discharged liability, total estimated cost of package, reasons for such withholding of payment and release of such payments etc.;

(vi) Any liability for works admitted by the Commission after the cut-off date to the extent of discharge of such liabilities by actual payments;

(vii) Any additional capital expenditure which has become necessary for efficient operation of generating station other than coal/lignite based stations or transmission system as the case may be. The claim shall be substantiated with the technical justification duly supported by the documentary evidence like test results carried out by an independent agency in case of deterioration of assets, report of an independent agency in case of damage caused by natural calamities, obsolescence of technology, up-gradation of capacity for the technical reason such as increase in fault level;

(viii) In case of hydro generating stations, any expenditure which has become necessary on account of damage caused by natural calamities (but not due to flooding of power house attributable to the negligence of the generating company) and due to geological reasons after adjusting the proceeds from any insurance scheme, and expenditure incurred due to any additional work which has become necessary for successful and efficient plant operation;

(ix) In case of transmission system, any additional expenditure on items such as relays, control and instrumentation, computer system, power line carrier communication, DC batteries, replacement due to obsolesce of technology, replacement of switchyard equipment due to increase of fault level, tower strengthening, communication equipment, emergency restoration system, insulators cleaning infrastructure, replacement of porcelain insulator with polymer insulators,

replacement of damaged equipment not covered by insurance and any other expenditure which has become necessary for successful and efficient operation of transmission system; and

(x) Any capital expenditure found justified after prudence check necessitated on account of modifications required or done in fuel receiving system arising due to non-materialization of coal supply corresponding to fullcoal linkage in respect of thermal generating station as result of circumstances not within the control of the generating station:

Provided that any expenditure on acquiring the minor items or the assets including tools and tackles, furniture, air-conditioners, voltage stabilizers, refrigerators, coolers, computers, fans, washing machines, heat convectors, mattresses, carpets etc. brought after the cut-off date shall not be considered for additional capitalization for determination of tariff w.e.f. 1.4.2014:

Provided further that any capital expenditure other than that of the nature specified above in (i) to (iv) in case of coal/lignite based station shall be met out of compensation allowance:

Provided also that if any expenditure has been claimed under Renovation and Modernization (R&M), repairs and maintenance under (O&M) expenses and Compensation Allowance, same expenditure cannot be claimed under this regulation.

(4) In case of de-capitalization of assets of a generating company or the transmission licensee, as the case may be, the original cost of such asset as on the date of de-capitalization shall be deducted from the value of gross fixed asset and corresponding loan as well as equity shall be deducted from outstanding loan and the equity respectively in the year such de-capitalization takes place, duly taking into consideration the year in which it was capitalized."

19. The projected additional capital expenditure allowed vide order dated 26.12.2017 in Petition No. 152/GT/2015 is as under:

(Rs.in lakh)

Sl. No	**Package Name**	**2014-15**	**2015-16**	**2016-17**	**2017-18**	**2018-19**
1	BTG Package- Station	(-) 416.00	0.00	0.00	0.00	0.00
2	Cost of Land & Site	19505.00	0.00	0.00	0.00	0.00
3	General Civil Works (GCW)	9793.00	0.00	0.00	0.00	0.00
4	Plant Water System (PWS)	214.00	0.00	0.00	0.00	0.00

20. The Petitioner was directed by the said order dated 26.12.2017 in Petition No. 152/GT/2015 to furnish the calculation of IDC along with basis of IDC allocation towards additional capital expenditure and the reconciliation of the same with books of accounts.

21. The Petitioner in Form 9Bi and Form-9C of the petition, has furnished the position of additional capitalization and de-capitalization as per books of accounts as under:

(Rs. in lakh)

	2014-15	**2015-16**	**2016-17**	**2017-18**	**2018-19**
Additional capitalization as per books (a)	34679.91	14992.72	1087.48	2267.78	4390.74
Less: Exclusions (items not allowable / not claimed)	0.00	0.00	58.34	53.53	10.44
Additional capitalization claimed	**34679.91**	**14992.72**	**1029.14**	**2214.25**	**4380.30**
De-capitalization as per books of accounts	3214.56	131.14	69.61	132.63	81.37

2014-15

22. The additional capitalisation of Rs.31465.35 lakh (*after adjustment of the de-capitalisation of Rs.3214.56 lakh*) claimed in 2014-15 *vis-a-vis* the projected additional capitalisation allowed in 2014-15 vide order dated 26.12.2017 in Petition No. 152/GT/2015 are as under:

(Rs in lakh)

Head of Work/Equipment	**Projected additional capitalization allowed vide Commission's order dated 26.12.2017 in Petition No.152/GT/2015**	**Additional capital expenditure claimed in this petition**
Ash Handling System (AHS)	(-) 413.00	48.65
BOP	45.00	18.21
BTG Package – Station	(-) 416.00	730.69
Coal Handling System (CHS)	(-)502.00	1042.53
Cost of Land & Site	19505.00	21142.23
General Civil Works	9793.00	10577.92
IT System for Software	414.00	457.52
Plant Water System	214.00	252.36
Pre-Operative expenses	1836.00	207.87
Design, Engineering & Project Management	787.00	0.00
Township & Colony	57.00	57.12

Interest During Construction (General Civil Works)	145.00	144.82
Total additions (a)	**31465.00**	**34679.91**
De-capitalization **(b)**	(included in the above)	3214.56
Total (c)=(a)-(b)	**31465.00**	**31465.35**

23. The de-capitalization of Rs.3214.56 lakh claimed as aforesaid, includes the de-capitalization of Rs.1147.14 lakh for 'Generator Transformer', de-capitalization of Rs.1550.00 lakh corresponding to adjustment in 'Coal Handling System' and de-capitalization of Rs.462.07 lakh corresponding to adjustment on account of LD adjustment in 'Ash Handling System'.

24. The Petitioner has submitted that the actual additional capital expenditure incurred for 2014-15 is in respect of assets which form part of the original scope of work of the project and is up to the cut-off date of the generating station. COD of the generating station is 24.7.2012 and, accordingly, the cut-off date of the generating station, in terms of the 2009 Tariff Regulations is 31.3.2015. It is observed that the claim of the Petitioner for net additional capital expenditure of Rs.31465.35 lakh in 2014-15 (after adjustment of de-capitalization) is against the net projected additional capital expenditure of Rs.31465.00 lakh allowed vide order dated 26.12.2017 in Petition No. 152/GT/2015. Since the additional capitalisation claimed is in respect of assets which form part of the original scope of work of the project and is up to the cut-off date, the net additional capital expenditure of Rs.31464.35 lakh (Rs.34679.91 lakh-3214.56 lakh) is allowed in 2014-15 in terms of Regulation 14(1)(ii) of the 2014 Tariff Regulations.

2015-19

25. In Petition No.152/GT/2015, the Petitioner had claimed projected additional capital expenditure in respect of certain assets/ works, which form part of the original scope of work of the project, namely, Railway System, Township & Colony, General

Civil Works, Reverse Osmosis plant, Ash Conveying Pipeline, Ash Handling System, Coal Handling System, BOP Electrical, BTG Package, Design Engineering and Project Management, Pre-operative Expenses and Additional Spares during the period 2015-18 with a prayer for extension of cut-off date of the generating station till 31.3.2019, due to the delay in execution of these works. Though the prayer of the Petitioner for extension of cut-off date of the generating station till 31.3.2019 was rejected by order dated 26.12.2017, the Commission had allowed the projected additional capitalization in 2015-16 only towards works namely, RO system and Ash Handling System, subject to the Petitioner furnishing certain additional information at the time of truing-up of tariff of the generating station. However, in respect of other assets/ works like Railway System, Township & Colony, General Civil Works and Ash Conveying Pipeline, the projected additional capitalization for the period 2015-18 was disallowed, but liberty was granted to the Petitioner to approach the Commission for additional capitalization, based on the actual expenditure incurred and in accordance with the provisions of the applicable Tariff Regulations. The relevant portions of the order dated 26.12.2017 is extracted hereunder:

Railway System, Township & Colony, General Civil Works

"91..In view of this submission and considering the fact that capitalization of projected additional expenditure of these assets/ expenditure before 31.3.2019 is uncertain, the consideration of the prayer of the petitioner for extension of cut-off date of the generating station till 31.3.2019 would not serve any useful purpose. In this background, the prayer of the petitioner for projected capitalization of the expenditure is not allowed. However, the petitioner is granted liberty to approach the Commission for additional capitalization based on the actual expenditure incurred for these assets and the same will be considered after due diligence and prudence as per the regulation in vogue at that time. In view of this, the projected additional capitalization claimed in respect of Railways System (`31100.00 lakh in 2016-17 and `9400.00 lakh in 2017-18), Township & Colony (`2000.00 lakh in 2015-16, `3000.00 lakh in 2016-17 and `1442.00 lakh in 2017-18) and General Civil Works for`6255.00 lakh in 2015-16 has not been allowed at this stage."

Ash Conveying Pipeline

"95…In view of this Submission and considering the fact that the capitalization of projected additional expenditure of the asset/ expenditure before 31.3.2019 is uncertain, the consideration of the prayer of the petitioner for extension of cut-off date of the generating station till 31.3.2019 would not serve any useful purpose. In this background, the prayer of the petitioner for projected capitalization of the expenditure is not allowed. However, the

petitioner is granted liberty to approach the Commission for additional capitalization based on the actual expenditure incurred for the asset and the same will be considered in accordance with the provisions of the Tariff Regulations applicable. Based on this, the projected additional capitalization claimed of `11200.00 lakh in 2017-18 in respect of Ash Conveying Pipeline has not been allowed."

Reverse Osmosis system

100……Considering the fact that the expenditure incurred during 2015-16 is in compliance with the directions of JSPCB mandating the installation of the RO system, we allow the claim of the petitioner under Regulation 14(2)(ii) of the 2014 Tariff Regulations. This is however subject to the petitioner filing certain additional information on affidavit namely the (i) audited actual expenditure incurred for the asset (ii) LD amount, if any, recovered from the contractor (iii) reasons for delay including IDC, if any; (iv) Cost-benefit analysis and (v) technical capacity assessment at the time of truing-up of tariff of the generating station in terms of Regulation 8 of the 2014 Tariff Regulations"

Ash Handling System

102……..It is however noticed that the work of „Ash handling system" is continuous in nature and the said work which is included in the original scope of work of the project is being carried out in phases, during the life time of the project. In this background, we are inclined to allow the claim of the petitioner under this head in terms of Regulation 14(3)(iv) of the 2014 Tariff Regulations. This is however subject to the petitioner submitting relevant details regarding the work executed, at the time of truing-up of tariff, in terms of Regulation 8 of the 2014 Tariff Regulations"

26. Also, the Petitioner, in the Petition No.152/GT/2015, had claimed projected additional capital expenditure during 2014-19 in respect of 'Other assets/works' which were not part of the original scope of work of project, namely, Building and Civil Engineering works, Transformer and Sub-station equipment, Plant & Machinery, Other Assets-Unclassified and IT Equipment. The Commission, while disallowing such claims in its order dated 26.12.2017, granted liberty to the Petitioner to approach the Commission at the time of truing-up of tariff with detailed justification, including the provisions of the relevant regulations under which the said expenditure was claimed. The Commission held as under:

"110. It is observed that petitioner has not filed any details regarding the break-up of the "Plant and Machinery" Building & Civil works" and "Other un-classified assets" along with justification and the relevant provisions of the regulations under which each asset/work has been claimed for 2014-19. In this background, we are not inclined to allow the projected additional capital expenditure in respect of items/assets which are not in the original scope of work as shown in the above table. However, the petitioner is granted liberty to approach the Commission at the time of truing-up of tariff along with the detailed justification and the provisions of relevant regulations under which the expenditure has been claimed".

27. In this background, the additional capital expenditure claimed by the Petitioner in the present petition, for the period 2015-19, are summarized below:

(Rs. in lakh)

Assets/Works	2015-16	2016-17	2017-18	2018-19
Reverse Osmosis (RO) System	7798.20	(-) 28.04	57.38	-
IDC- RO system	349.53	-	-	-
Ash Handling System (AHS)	26.23	-	-	-
Balance of Plant (BOP)	445.57	5.82	-	-
BTG	837.40	1.78	-	-
Spare GT	846.76	35.73	-	-
Coal Handling System (spares)	367.53	-	-	-
Cost of Land and Site	69.98	0.40	-	2112.86
General Civil Works	791.99	184.39	154.47	147.49
Railway System	2412.62	-	-	-
IDC- Railway System	448.94	-	-	-
Town Ship & Colony	43.38	-	-	-
New Schemes	554.59	829.06	2002.40	2119.96
Total additional capital expenditure claimed	**14992.72**	**1029.14**	**2214.25**	**4380.30**
De-capitalization	131.14	69.61	132.63	81.37
Net additional capital expenditure claimed	**14861.58**	**959.53**	**2081.62**	**4298.93**

28. The Petitioner has submitted that the capitalization of these packages that form part of the original scope of work of the project could not be completed till the cut-off date (31.3.2015) on account of various factors which were beyond the control of the Petitioner and due to 'Force Majeure' reasons. The Petitioner has also submitted that after the cut-off date, most of the project packages were completed in 2015-16, except for Railway System, General Civil Works (GCW) and Land & Site, which are expected to be completed by end of 2020-21 i.e. by 31.3.2021. However, some assets in these packages have been put to use during the 2014-19 tariff period and, accordingly, part capitalization of these packages falls in the said period and the balance within the 2019-24 tariff period. The Petitioner has added that in majority of cases where additional capitalization within the original scope of work of the project has been delayed beyond the cut-off date (31.3.2015), the same has been on account of reasons beyond the control of the Petitioner. The Petitioner has, therefore, submitted that in respect of the additional capitalization during the period

2015-19, the Commission may exercise its power under Regulation 3(25) read with Regulation 8(3) and Regulation 54 of the 2014 Tariff Regulations (Power to relax) to consider the delays faced by the Petitioner due to 'Force Majeure' events and to approve the additional capitalization, within the original scope of work. In addition to this, the Petitioner has submitted that as the generating company is not entitled to Compensation Allowance as per Regulation 17 of the 2014 Tariff Regulations, funds for minor capital assets for construction or procurement under the said allowance was not available to the Petitioner. Therefore, for such expenditure on capital assets, the Petitioner has sought invocation of Regulation 54 of the 2014 Tariff Regulations (Power to relax) for consideration of such additional capital expenditure in terms of Regulation 8(3) and Regulation 14(3) read with the principles laid down under Section 61 of the Electricity Act, 2003.

29. The Respondent, KSEBL has submitted that Regulation 14 of the 2014 Tariff Regulations allows additional capitalization limited to works within the original scope of work of the project. It has also stated that the additional capital expenditure claimed in respect of assets/ works beyond the original scope of work, such as Fire tender with shed & fixed foam system, NABL accredited lab, Yard sprinkling and fire detection system in CHP, Re-heater modification & MTM installation, Coal pit run-off mechanised drainage system & segregation of storm water, Power supply redundancy and re-arrangement at BOP area, Gate house near junction tower & E-security system, Replacement of IT Equipment, Labour Colony, Augmentation of store area and MAX DCS Version up-gradation, do not fall within the scope of 'Change in law' and these claims ought to be carried out from the O&M expenses allowed to the generating station in terms of the 2014 Tariff Regulations. Based on the submissions of the parties.

30. We examine the additional capital expenditure claimed for the period 2015-19 in the following paragraphs.

Reverse Osmosis (RO) Plant

31. The Commission vide order dated 26.12.2017 in Petition No.152/GT/2015 had allowed the projected additional capital expenditure of Rs.8400 lakh for Reverse Osmosis Plant in 2015-16, subject to the Petitioner furnishing certain additional information, namely the (i) audited actual expenditure incurred for the asset; (ii) LD amount, if any, recovered from the contractor; (iii) reasons for the delay including IDC, if any; (iv) Cost-Benefit analysis; and (v) Technical capacity assessment at the time of truing-up of tariff of the generating station in terms of Regulation 8 of the 2014 Tariff Regulations. In compliance with this direction, the Petitioner has claimed the actual additional capital expenditure of Rs.8147.73 lakh [Rs 7798.20 +349.53 lakh (IDC)] in 2015-16, (-) Rs.28.04 lakh in 2016-17 and Rs.57.38 lakh in 2017-18 towards RO System, duly supported by Auditor's certificate. The Petitioner has also submitted that there was no occasion for recovery of Liquidated Damages (LD) from the contractor and since the RO plant was not delayed, there was no impact on increase in IDC. As regards Cost-benefit analysis, the Petitioner has submitted the following:

> (a) The specific energy requirement of RO technology is 70% less than other desalination methods. The water recovery ratio of RO desalination system is relatively higher than other methods. The reverse osmosis desalination process is able to eliminate both organic and inorganic pollutants from water. RO technology has the advantages of convenient operation, equipment compactness, working environment safety and outlet water quality can satisfy different requirements. In power plant, the economic benefit is not the main factor that affects the recycled water promotion which is mandated by Environmental laws;
>
> (b) Due to particularity and water quality of the boiler water supply, the cost and optimization of desalination cannot be directly applied in the RO treatment process in power plant. RO technology is known as the most

reliable, cost effective technology, with high rate of energy efficiency in producing fresh potable water in comparison to other desalination technologies. The Petitioner carried out extensive study involving Tata Power Engineering Department and Tata Consulting Engineers (TCE) to study the water balance system and acted on their advice on corrective action to be taken to ensure such Zero Liquid Discharge (ZLD) condition as imposed upon by Jharkhand State Pollution Control Board (JSPCB). Among various technologies considered during the detailed study, RO based Water Treatment System was found most suitable due to high reliability and effectiveness;

(c) With regard to technical capacity assessment, initial Performance Guarantee (PG) tests were carried out for the RO plant in November, 2016 after construction of the RO plant. However, due to various reasons, these tests were not successful. Subsequently, a month long ZLD PG test was conducted at the generating station from 31.5.2018 to 30.6.2018. The test was conducted in accordance with the approved PG test procedure and as per the modalities finalized between the Petitioner and ASA (M/s Aquatech) in the meeting held at site on 30.5.2018. ZLD operated at full load during this period of 30 days. Most of the parameters were within the guaranteed limit. Such additional cost has been borne by the Petitioner to meet the statutory compliance of JSPCB through installation of RO Plant to ensure 'zero water discharge' from the generating station; and

(d) The JSPCB provides the requisite 'Consent to Operate' (CTO) to Petitioner for operation of the project in view of fulfilment of certain requirements as per the Water (Prevention and Control of Pollution) Act, 1974 and Air (Prevention and Control of Pollution) Act, 1981. JSPCB in the CTO letter dated 11.5.2012, had directed the Petitioner to ensure zero leakage discharge from the generating station. As per norms prescribed by JSPCB, the process water cannot be discharged to Maithon Dam Reservoir, due to its adverse impact on the aquatic life and ecology.

32. It is observed from the above that the Petitioner, in order to ensure compliance with the directions of JSPCB (Jharkhand State Pollution Control Board) and in order to reduce the make-up water consumption, had taken up the installation of RO system and had obtained Board's approval for the expenditure in 2013, but capitalized the expenditure in 2015-16. In view of the clarification and considering the fact that the additional capital expenditure incurred is within the approved limit of Rs.8400 lakh allowed vide order dated 26.12.2017 in Petition No. 152/GT/2015, the

claim of the Petitioner for Rs.8147.73 lakh [Rs.7798.20 +349.53 lakh (IDC)] in 2015-16 and Rs.57.38 lakh in 2017-18 is allowed under Regulation 14(3)(ii) of the 2014 Tariff Regulations. Also, the negative adjustment of (-) Rs 28.04 lakh for RO system in 2016-17, which is in respect of the expenditure claimed for this asset in 2015-16, is also considered and allowed for the purpose of tariff.

Ash Handling System

33. The Commission, in its order dated 26.12.2017 in Petition No.152/GT/2015 had allowed the projected additional capital expenditure of Rs.716.00 lakh in 2015-16 for 'Ash Handling System' under Regulation 14(3)(iv) of the 2014 Tariff Regulations, subject to the Petitioner submitting relevant details regarding the work executed, at the time of truing-up of tariff in terms of Regulation 8 of the 2014 Tariff Regulations. The Petitioner, in this petition, has claimed actual additional capital expenditure of Rs.26.23 lakh in 2015-16 for this asset and has submitted that most of the works have been completed by the cut-off date. It has, however, submitted that initial spares amounting to Rs.26.23 lakh, for which procurement was initiated before the cut-off date, was delivered and capitalised in 2015-16. Therefore, the Petitioner has submitted that the Commission may permit capitalization of Rs.26.23 lakh in terms of Regulation 14(3)(iv) of the 2014 Tariff Regulations. Since the work of 'Ash Handling System' is continuous in nature and is carried out in phases, during the lifetime of the project and is within the original scope of work of the project, we allow the actual additional capital expenditure of Rs.26.23 lakh in 2015-16 under Regulations 14(3)(iv) of the 2014 Tariff Regulations.

Railway Infrastructure Package

34. The Petitioner, in Petition No.152/GT/2015, had claimed projected additional capital expenditure of Rs.31100.00 lakh in 2016-17 and Rs.9400.00 lakh in 2017-18

for 'Railway System Package' and the same was disallowed by order dated 26.12.2017, with liberty to approach the Commission for additional capitalization based on the actual expenditure incurred for the said asset/ work, for consideration of the Commission in accordance with the regulations in vogue. The Petitioner, in this petition, has claimed actual additional capital expenditure of Rs.2861.56 lakh [2412.62+448.94 (IDC)] in 2015-16 towards 'Railway System' which form part of the original scope of work of the project, but after the cut-off date. In justification of the said claim, the Petitioner has submitted the following:

> a) Though the overall Railway Infrastructure Package is yet to be completed and operationalized by the Petitioner, owing to severe land acquisition related disputes as explained in this petition and detailed submissions in Petition No. 152/GT/2015, the Petitioner has completed the construction of number of roads, over-bridges and under-passes for smooth movement of public transport by road, which were falling in the way of Railway corridor. Pending completion of Railway corridor for the purpose of coal transportation to the plant, these Civil works viz., roads, over-bridges, under-passes were opened for public use and, therefore, the amount of Rs. 24.13 crore along with the corresponding IDC of Rs.4.49 crore has been capitalised in the books of accounts of the Petitioner. Accordingly, the same has been submitted for capitalisation for the purpose of tariff;
>
> b) In case, capitalisation of these civil assets is not allowed till the completion of Railway Infrastructure Package as Railway Infrastructure has not been put to use, capitalisation (along with corresponding additional IDC) of the same may be allowed along with remaining Railway Package and to allow such capitalisation along with corresponding additional IDC or in the alternative, the Petitioner may be allowed to amend its proposal to this effect. The decision of the Commission in its order dated 4.12.2014 in Petition No. 17/GT/2013 and order dated 9.10.2018 in Petition No. 38/MP/2018 is applicable in this case.

35. It is pertinent to mention that the Petitioner, in Petition No.152/GT/2015 had sought extension of cut-off date of the generating station till 31.3.2019 stating that some of the works of 'Railway System' may not even be completed before 31.3.2019, with liberty to approach the Commission after completion of the said works. From the submissions of the Petitioner, in this petition, it is evident that the

'Railway Infrastructure Package System' work has not yet been completed and the asset has not been put to use. Only some civil work like roads, over-bridges and under-passes for smooth movement of public transport have been constructed and the expenditure incurred on these works, is sought to be capitalised by the Petitioner, under this head. In other words, the additional capitalisation claimed by the Petitioner, is not in respect of the completion of the Railway System, but only for few civil works which have been completed. Without the completion of the Railway System, the construction of these civil assets for public transport has no nexus with the generation of power from the plant. In our view, the additional capitalisation of these civil assets cannot be permitted, unless the Railway System is completed and put to use for generation and supply of power. The Petitioner's reference to order dated 9.10.2018 in Petition No. 38/MP/2018 in justification of the prayer for relaxation has no relevance in the present case and is, therefore, not considered. In view of this, the prayer of the Petitioner for additional capitalisation of Rs.2861.56 lakh in 2015-16 is not allowed. The Petitioner may approach the Commission after completion of the work related to Railway System is over.

Township and Colony

36. The Petitioner, in Petition No. 152/GT/2015 had claimed projected additional capital expenditure of Rs. 2000.00 lakh in 2015-16, Rs.3000.00 lakh in 2016-17 and Rs.1442.00 lakh in 2017-18 for 'Township & Colony' and the same was disallowed by order dated 26.12.2017, with liberty to approach the Commission for additional capitalization based on the actual expenditure incurred for the said asset/ work and for consideration as per regulations in vogue. The Petitioner, in this petition, has claimed actual additional capital expenditure of Rs. 43.38 lakh in 2015-16 for 'Township & Colony' which form part of the original scope of work, but after the cut-off date. The Petitioner has submitted that while the expenditure of Rs.57.00 lakh

capitalised in 2014-15 was within the approved total capitalisation of Rs.34680 lakh, an expenditure of Rs.43.38 lakh was capitalised in 2015-16 for this work, which form part of the original scope, but was deferred. The additional capitalisation claimed for 'Township & Colony' work in 2015-16 is on account of the same being deferred from 2014-15. The works pertaining to the township and colony, which are within the original scope of work, are spilled over works which had started prior to the cut-off date and, hence, the Petitioner was granted liberty vide order dated 26.12.2017 in Petition No 154/GT/2015 to approach the Commission after completion of the works. In the above background, we allow the additional capitalisation of Rs.43.38 lakh in 2015-16 as claimed by the Petitioner.

Cost of Land & Site and General Civil Works

37. The Petitioner, in Petition No.152/GT/2015, had not claimed any projected additional capital expenditure towards 'Cost of Land & Site' during the period 2015-19. However, the Petitioner, in the said petition, had also claimed projected additional capital expenditure of Rs.6255 lakh in 2015-16 for 'General Civil Works' with a prayer for extension of the cut-off date till 31.3.2019 and the same was disallowed vide order dated 26.12.2017. However, liberty was granted to the Petitioner to approach the Commission for additional capitalization of 'General Civil Works', based on the actual expenditure incurred and to be considered in accordance with the regulations in vogue. The Petitioner has submitted justifications for claim towards Cost of Land & Site and General Civil Works as stated below.

A. Cost of Land & Site

38. The Petitioner, in this petition, has claimed the actual additional capital expenditure of Rs.69.98 lakh in 2015-16, Rs. 0.40 lakh in 2016-17 and Rs.2112.86 lakh in 2018-19 towards **'**Cost of Land & Site**'** which form part of the original scope of

work, under Regulation 14(1)(ii) read with Regulation 54 (Power to Relax) of the 2014 Tariff Regulations. As regards 'land acquisition' issues and consequent time and cost overrun, the Petitioner has mainly submitted the following:

(a) Acquisition of land for setting up of land-intensive projects like that for a thermal power plant is a humongous and time-consuming task. The task involved becomes even more complicated when the Project Proponent/ Developer has to deal with vast and multiple land parcels, in an area that has the environment of socio-cultural disturbances with a history of fragile industrial relations in and around that area;

(a) MPL has made earnest efforts in coordinating with various stakeholders involved, such as its equity partner – DVC (which is a statutory entity of the Central Government), the land owners, the State Government, various Government departments and other multitude of associated entities, for timely completion of the thermal power project, which today benefits Distribution Licensees in New Delhi, West Bengal, Jharkhand and Kerala;

(b) Despite serious planning and prudence, various extraneous factors that are out of bound of the project developer's control have delayed the project completion timelines. The said delay is due to 'Force Majeure' conditions and, therefore, such reasons cannot in any manner be attributable to MPL.

(c) While the zero date of the Project was 25.10.2007, possession of land and, hence, construction activity could not be started until R&R Policy was approved by Government of Jharkhand and a settlement reached with Project Affected People ("PAP") only on 31.03.2008. There is incremental cost associated with time delay/ time overrun which has ultimately led to increase in Project Cost;

(d) This following summary of events highlights some of the key facts w.r.t. land acquisition for the Project of the relevant period in the past and several associated issues in a chronological manner:

(i) The land earmarked for the project comprises land of various natures viz. Rayati (Private), Gair Majruah (GM) or State Government owned and Forest land;

(ii) The land earmarked for the project was acquired (Rayati) by DVC or leased (GM and Forest land) to DVC between the period from 2002 to 2009, but in phases, and was not transferred to MPL, either on paper or physically till 31.3.2008. Some part of project land is yet to be transferred in favour of MPL, although its possession has been given to MPL;

(iii) In the absence of R&R policy in the State, MPL had to take initiatives in the R&R activities associated with the Project;

(iv) The possession of major portion of land to MPL was available after significant delay i.e. after 31.3.2008, when R&R Policy was framed by Government of Jharkhand ('GoJ');

(v) Once major portion of the land was under possession of MPL, Project related activities were initiated and expedited to catch up with the scheduled timelines.

(vi) However, MPL faced massive resistance from the landowners not only during construction phase of the Project but also thereafter, leading to cases being filed, some of which are still pending. Therefore, MPL was compelled to litigate at multiple occasions to settle land acquisition related disputes. Some of the Writ Petitions were resolved by the Hon'ble High Court of Jharkhand and some of them are still pending before the Land Acquisition Court.

(vii) Securitization of the project land to lenders could not be done as MPL could not obtain title/ sub-lease of land in spite of repeated follow ups with relevant authorities.

(viii) GM and Forest land earmarked for the Project, though transferred to DVC by the Government of Jharkhand, was not granted the requisite permission by Government to enable DVC for further transfer/ sub-lease to MPL.

(ix) There was change in the policy clarity on whether land could be sub-leased for long period in the name of private entities like MPL.

(x) Therefore, even though DVC was a 26% equity partner for the Project, the land transferred to DVC by the Government of Jharkhand was finally permitted to be transferred and made available to MPL in 2018 i.e. after delay of almost 10 years.

(xi) MPL made relevant payments with respect to the acquisition/ sub-lease of land within reasonable timelines against the original/ amended fees/ lease to the respective department.

(xii) GoJ, which permitted MPL physical possession of GM land and its transfer under sub-lease in 2010, had later gone back on their permission, citing provisions of the (new) amendments in the land policy of 2011/14 in the State, which made the process carried out till then redundant, thereby leading to additional associated cost and loss of time. The Change in Policy of GoJ fall within the scope of 'Change in law'.

(xiii) GoJ was fully aware of the shareholding pattern of MPL at the time of granting permission and despite the same, revoked the permission for sub-leasing of the land granted to it on the grounds that MPL is not a Government entity.

(xiv) On the grounds of new/ amended policy, provisions and restrictions on sub-lease to only Government entities, GoJ had asked DVC to surrender its sub-lease permission and the leased land, back to the Government.

(xv) MPL initiated its efforts for direct lease of land (GM land and un-notified Forest land) from GoJ under the land Policy of 2017. In response thereto, MPL received fresh 'Demand note' for the difference in current and previously paid rates with regard to un-notified land from Government which it has paid in 2018-19. The Demand note for GM land is expected to be received by MPL in the near future.

The Petitioner has furnished in detail, the justification for time and cost overrun in Annexure-P/4 and P/5 of the petition.

B. Cost Over-run for land

39. The Petitioner has submitted that in order dated 26.12.2017 in Petition No.152/GT/2015, a total of Rs.19505 lakh was approved towards Cost of Land & Site expenses in 2014-15. It has stated that the actual capitalisation under Land & Site head had increased to Rs.21142 lakh as compared to initially approved amount of Rs.19505 lakh. This, according to the Petitioner is due to internal adjustment of Rs.1628 lakh between two heads viz. "Cost of Land & Site" and "Pre-Operative expenses". The Petitioner has also submitted that the capitalization approved by the Commission under Pre-operative expenses was Rs.1836 lakh in 2014-15. However, the actual additional capitalization towards Pre-operative expenses was Rs. 208 lakh in 2014-15 and the remaining amount of Rs.1628 lakh initially approved under Pre-operative expenses was capitalised under "Cost of Land & Site" owing to the nature of expense as the statutory auditor changed the category of lease hold land due to which the amount of Rs.1628 lakh was shifted from pre-operative expenses to cost of land and is, thus, claimed as part of capitalisation under the head 'Cost of Land & Site in 2014-15'. The Petitioner has further submitted that there has been inter-se adjustment between these two heads of capitalisation, owing to re-categorization of

expenses heads in audited accounts way back on 11.5.2015 by statutory auditor and there is no increase in the overall actual capitalisation under these heads put together in 2014-15. In addition to the above, the Petitioner has submitted that it had incurred an expenditure of Rs.70 lakh in 2015-16, Rs.40 lakh in 2016-17 and Rs.2113 lakh in 2018-19 for purchase/ leasing of following land parcels:

(i) Purchase of private land in Mugma Village for Railway Corridor (Rs.0.70 crore in 2015-16, Rs.0.004 crore in 2016-17 and Rs.1.72 crore in 2018-19);

(ii) Payment of fresh demand for un-notified Forest land admeasuring 191.67 acre (Rs.11.61 crore in 2018-19);

(iii) Payment of demand for GM land acquired for Railway Corridor and Payment of License fee for Railway land acquired for Railway Corridor (Rs.6.47 crore in 2018-19);

(iv) Payment of fresh demand of GM Land (114.95 acre) for the Project (2019-24);

40. The details of additional capitalization towards Land & Site for 2015-19, as tabulated by the Petitioner, are as under:

(Rs. in crore)

Category		**2015-16**	**2016-17**	**2017-18**	**2018-19**
Main Plant Land					
Raiyati	Freehold land-Main Plant	-	-	-	-
Forest Land	Forest Land- Main project	-	-	-	11.61
GM land	GM land	-	-	-	-
Railway Land					
Raiyati	Freehold Land- Railway	0.7	0	-	-
	Freehold Land- Railway-Mugma	-	-	-	1.72
GM Land	GM land Railway-I	-	-	-	-
	GM Land- Railway-II	-	-	-	6.47
	Eastern Railway Land-II	-	-	-	1.04
	Eastern Railway Land-I	-	-	-	0.3
	Krishi Farm and tribal land	-	-	-	-
	Contingency	-	-	-	-
	Total	**0.7**	**0**	**-**	**21.13**

41. Accordingly, the Petitioner has submitted that due to changes in policies and the stand of 'GoJ' on transfer of land, the land transfer to the Petitioner for the Project had been delayed. The Petitioner had been asked to pay additional amount

on account of transfer of land from DVC to the Petitioner and also additional payments to the landowners were mandated by the State Government, thereby increasing the project cost.

C. General Civil Works

42. The Petitioner has claimed actual additional capital expenditure of Rs.791.99 lakh in 2015-16, Rs.184.39 lakh in 2016-17, Rs.154.47 lakh in 2017-18 and Rs.147.49 lakh in 2018-19 towards **'**General Civil Works' which form part of the original scope of work, under Regulation 3(25) and Regulation 8(3) read with Regulation 54 of the 2014 Tariff Regulations. The Petitioner has submitted that delay in execution of 'General Civil Works' package capitalised during the period 2015-19 is on account of the various 'Force Majeure' reasons which were beyond the control of the Petitioner. As regards General Civil Works (GCW), the Petitioner has submitted that in terms of the liberty granted vide order dated 26.12.2017, the Petitioner has claimed actual capital expenditure of Rs.10578 lakh in 2014-15 for General Civil Works against the approved cost of Rs.9793 lakh. It has also submitted that an amount of Rs.787 lakh allowed in 2014-15 towards Design, Engineering and Project Management has been capitalized under 'General Civil Works' in 2014-15 as 'Engineering and Project Management' were provided for 'General Civil Works' package. Thus, a total amount of Rs.10578 lakh in 2014-15 has been claimed under this head, taking both the heads together. According to the Petitioner, there has been inter-se adjustment between these two heads of capitalization owing to re-categorization of expenses, but there is no increase in the overall actual capitalization under these heads put together. The details of the expenditure and the reasons for the delay as furnished by the Petitioner are as under:

> **(i) Boundary Wall and Peripheral Road inside Plant along Boundary Wall**: Boundary wall work was delayed due to various land related disputes and other problems which were beyond the control of the Petitioner. The contract for boundary

wall was awarded to M/s Premier Traders in 2012-13. However, due to various land disputes and other problems, the contractors could not complete the work on time citing problems created by local villagers as is evident from letters dated 23.6.2013, 7.7.2014, 23.9.2014, 19.1.2015 and 3.3.2016. Due to non-completion of the boundary wall, the Jharkhand Pollution Control Board (JPCB) in its Consent to Operate letter dated 23.5.2014 directed that the occupier shall construct pucca minimum 10 feet high boundary wall. The boundary wall was, therefore, required to be expedited covering the entire area around ash pond by wall of 7 km (approx.) length to securitise most of the key and sensitive areas. Various police complaints dated 3.2.2016, 5.5.2017, 13.9.2017, 6.4.2018 were also lodged by the security supervisor regarding agitation initiated by villages. At present, 226 acres (out of 1116 acres) of plot of land is not covered by boundary wall because this 226 acre land parcel is partly inhabited by tribal and non-tribal people and, hence, this area had to be cordoned off internally with grid pillars. As most of the key and sensitive areas have been covered and securitised with proper boundary wall, it is proposed that entire remaining land asset including grid pillars is covered, securitised or demarcated by boundary wall (balance 6.45 km out of total 27.75 km). The completion status of the boundary wall is as under:

Sl. No.	Description	Completion status (in km)
1	Boundary wall completed by 31st March 2014	13.75
2	Boundary wall completed by 31st March 2016	4
3	Boundary wall completed by 31st March 2019	3.55
4	Boundary wall to be constructed	6.45
		27.75

The phasing of boundary wall capitalization is Rs 4.71 crore in 2015-16, Rs 1.43 crore in 2016-17, Rs 1.54 crore in 2017-18 and Rs 1.47 crore in 2018-19 and Rs 1.60 crore in 2019-20.

(b) Field Hostel (part of work got delayed): The Commission in its order dated 19.11.2014 (in Petition No.274/2010) had acknowledged that there is a need of field hostel within the boundaries of the plant for smooth, intervention free operation of the plant, considering the difficult remote location of the plant, accessibility at odd hours and frequent blockages and agitation by local villagers backed by factional politicians. The contract for construction of field hostel was awarded to M/s Kanwar Enterprises (P) Ltd in 2014. However, while carrying out the construction work, the contractor faced several hindrances from the local people. Therefore, M/s Kanwar addressed letter dated 13.5.2015 to the Petitioner, citing the reason for delay of field hostel and requested for time extension for the work. When the contractor started the work by making burgees for the layout and by installation of borewell, the locals damaged the burgees and borewell claiming to be owners of the land. This problem took around 2 months to be sorted out. Again, after starting the work, it was stopped by the locals demanding that work should be executed through them only. The contractor was ready, but the rates were very high and it took almost one month to convince them and make them ready to work at genuine rates. But the villagers could not deliver the required number of labour and the work was stopped. After resuming the work with available labour, it was again stopped by local vendors for about 45 days due to land dispute. Work was also stopped for 15

days by Samity people and the locals. There were also cases of hindrances by local vendors for around 30 days citing rate revision and various other reasons. In view of above reasons, which were totally out of control of the Petitioner and its contractor, the contractor asked for extension of contract thereby delaying some part of the project. Due to above issues, some part of the project got delayed by almost 3 months and 20 days and was finally completed in 2015-16. An amount of Rs.321 lakh and Rs.42 lakh was capitalized in 2015-16 and 2016−17 against Field Hostel and minor pending works of Gate House, Township etc.

43. We have examined the claims and justifications given by the Petitioner. According to the Petitioner, the cost of land had increased on account of changes in the policies of the Government of Jharkhand. Also, the works of Boundary wall and the peripheral road inside Plant along Boundary Wall and Field Hostel got delayed due to various force majeure events. Based on this, the Petitioner has prayed for relaxation of the provisions of 2014 Tariff Regulations to allow the additional capitalisation incurred due to reasons not attributable to the Petitioner. Regulations 3(25) and 54 of the 2014 Tariff Regulations are extracted hereunder:

> ***Regulation 54: Power to Relax.*** *The Commission, for reasons to be recorded in writing, may relax any of the provisions of these regulations on its own motion or on an application made before it by an interested person."*
>
> ***Regulation 3(25). 'Force Majeure'*** *for the purpose of these regulations means the event or circumstance or combination of events or circumstances including those stated below which partly or fully prevents the generating company or transmission licensee to complete the project within the time specified in the Investment Approval, and only if such events or circumstances are not within the control the generating company or transmission licensee and could not have been avoided, had the generating company or transmission licensee taken reasonable care or complied with prudent utility practices: a) Act of God including lightning, drought, fire and explosion, earthquake, volcanic eruption, landslide, flood, cyclone, typhoon, tornado, geological surprises, or exceptionally adverse weather conditions which are in excess of the statistical measures for the last hundred years; or (b) Any act of war, invasion, armed conflict or act of foreign enemy, blockade, embargo, revolution, riot, insurrection, terrorist or military action; or (c) Industry wide strikes and labour disturbances having a nationwide impact in India;*

44. It is observed from submissions of the Petitioner that the land payments are mainly due to (i) payment of fresh demand for un-notified Forest land, payment of demand for GM land acquired for Railway Corridor and (ii) payment of license fee for Railway land acquired for Railway Corridor etc. The payment delays were mainly

related with Railway Corridor disputes and Land site development. The purchase of private land in Mugma Village for Railway Corridor (for Rs.70 lakh in 2015-16, Rs.40 lakh in 2016-17 and Rs.172 lakh in 2018-19) and the Payment of fresh demand for un-notified Forest land measuring 191.67 acre (for Rs.1161 lakh in 2018-19) pertains to Railway corridor and the delay is attributable to the dispute which had arisen due to wrongful disbursement of land compensation amongst the beneficiaries. This resulted in Writ Petition No. 5084 of 2016 being filed by the Petitioner before the High Court of Jharkhand, wherein, directions were issued by the High Court on 6.9.2016 to the Deputy Commissioner, Dhanbad to expedite the resolution of land issues. As the matter could not be fully resolved, the Petitioner again filed Writ Petition No. 5242 of 2017 before the High Court of Jharkhand and the High Court in its judgement dated 22.2.2018, directed the State Government (GoJ) to cancel the earlier awards passed in favour of wrongful persons/ awardees and to further prepare fresh awards in favour of genuine persons within four months. The High Court's order dated 22.2.2018 has been enclosed as Annexure P6/H to the petition. In respect of (i) Payment of demand for GM land acquired for Railway Corridor and payment of license fee for Railway land acquired for Railway Corridor (for Rs.647 lakh in 2018-19) and (ii) Payment of fresh demand of GM Land (114.95 acre) for the project in 2019-24, it is noticed that additional payments were required to be made due to change in the policy of State Government (GoJ) for leasing the land. The sequence of events in regard to the leasing of land is enumerated below:

(i) On 5.1.2010: The Government of Jharkhand accorded in-principal approval to DVC for sub-leasing 114.95 acres (already leased to DVC) of land to MPL. Reference placed at annexure P/5-C of the petition.

(ii) On 22.1.2011: The Government of Jharkhand amended the leasing policy of land and held that on leased out land, third party right cannot be created and thereby sub-leasing already accorded to MPL vide letter dated 5.1.2010 became ineffective. Reference placed at annexure P/5-E of the petition.

(iii) On 30.9.2014: The Government of Jharkhand directed DVC to surrender 114.95 acres (already leased to DVC) of land stating that the DVC share being less than 51% in MPL, it does not fall under the category of government company as per Company Act. Thus, sub-leasing to MPL by DVC was withdrawn. Reference placed at annexure P/5-H of the petition.

(iv) On 4.1.2017: The Government of Jharkhand revised the rates for leasing of the land and thereby creating additional liability to MPL for the same land which was sub-leased to the Petitioner by DVC. Reference placed at annexure P/5-K of the petition.

(v) On 20.10.2017: DVC intimated to Govt. of Jharkhand that DVC Board had approved the surrender of 114.95 acres of land for subsequent grant of the same land to the Petitioner. Reference placed at annexure P/5-L of the petition.

(vi) On 08.11.2017: Petitioner requested the Govt. of Jharkhand that to initiate the leasing process directly in favour of the Petitioner and the same land is already in use for power plant. Reference placed at annexure P/5- of the petition.

(vii) On 24.11.2018: The Govt. of Jharkhand directed the Petitioner for further payment of Rs.43.69 lakh for leasing land to the Petitioner. Reference placed at annexure P/5-T of the petition.

45. On perusal of the sequence of events and documents furnished by the Petitioner, it is observed that the delay in payment towards land and site was due to change in policy of the State Government of Jharkhand. Scrutiny of the documents furnished indicates that 'land issues' had prolonged till 24.11.2018, i.e. even after the cut-off date. Though the said work form part of the original scope of work of the project, the Petitioner had to continue the execution of these works even after the cut-off date on account of the delay in the availability of land and site. Similarly, the delay in the development of Railway Corridor was cleared when Hon'ble High Court of Jharkhand vide its judgment dated 22.2.2018 had directed the State Government of Jharkhand to cancel the earlier awards passed in favour of wrongful awardees and to prepare fresh awards in favour of genuine persons and to proceed in accordance with law. The Petitioner had made all payments mandated due to change in policy of the State Government of Jharkhand and as a consequence of cancellation of wrongful disbursement of land compensation award. Therefore, the

expenditure so incurred has been claimed in this petition on actual and audited basis. Similarly, in the case of General Civil Works (Boundary wall and Field hostel), the delay in execution of these works is consequent upon the delay in the availability of land and are for reasons not attributable to the Petitioner. As regards the prayer of the Petitioner for extension of cut-off date till 31.3.2019, the Commission in its order dated 26.12.2017 in Petition No.152/GT/2015 had decided as under:

> *"In view of this submission and considering the fact that capitalization of projected additional expenditure of these assets/ expenditure before 31.3.2019 is uncertain, the consideration of the prayer of the petitioner for extension of cut-off date of the generating station till 31.3.2019 would not serve any useful purpose. In this background, the prayer of the petitioner for projected capitalization of the expenditure is not allowed. However, the petitioner is granted liberty to approach the Commission for additional capitalization based on the actual expenditure incurred for these assets and the same will be considered after due diligence and prudence as per the regulation in vogue at that time…"*

46. As already observed, the delay in the availability of land & site was due to changes in the policy of the Govt. of Jharkhand, cancellation of wrongful disbursement of land compensation award and clearance for the development of Railway Corridor after payment of compensation. Also, the delay due to non-availability of land had caused the delay in execution of the General Civil Works by the Petitioner and the same cannot be attributable to the Petitioner. From the documents enclosed by the Petitioner, it is noticed that the Petitioner has been coordinating with the local administration for speedy resolution of the land issues and has been taking steps to mitigate the delay. Accordingly, actual additional capitalisation of Rs.69.98 lakh in 2015-16, Rs 0.40 lakh in 2016-17 and Rs.2112.86 lakh in 2018-19 towards Land & Site is allowed under Regulation 14(3(i) of the 2014 Tariff Regulations. Consequently, as the General Civil Works were also delayed due to delay in the possession of land, for which reasons and justifications have been furnished in previous paragraphs, the actual additional capitalisation of Rs.791.99 lakh in 2015-16, Rs.184.39 lakh in 2016-17, Rs.154.47 lakh in 2017-18 and

Rs.147.49 lakh in 2018-19 towards General Civil Works is also allowed under Regulation 14(3(i) of the 2014 Tariff Regulations.

Coal Handling System

47. The Petitioner, in Petition No.152/GT/2015 had claimed projected additional capital expenditure of Rs.959.00 lakh in 2015-16 and Rs.2142.00 lakh in 2016-17 towards 'Coal Handling System' under Regulation 14(3) of the 2014 Tariff Regulations. By order dated 26.12.2017, the said claim was rejected as under:

> *"In response to the Commission's directions vide ROP of hearing dated 12.1.2016, the petitioner has not furnished any details of the works to be executed, the reasons/justification for the delay in the execution of 'Coal Handling System' beyond the cut-off date of the project. In this background, the projected additional capital expenditure for Coal Handling System claimed by the petitioner after the cut-off date is not allowed"*

48. The Petitioner, in the present petition, has claimed actual additional capital expenditure of Rs.367.53 lakh (including spares for Rs.282.72 lakh) in 2015-16 towards 'Coal Handling System' (which form part of the original scope of work of the project, but after the cut-off date) under Regulation 3(25) read with Regulation 8(3) and Regulation 54 of the 2014 Tariff Regulations. The balance amount of Rs.84.81 lakh (Rs.367.53 lakh - Rs.282.72 lakh) is towards Stone Picking shed (for Rs.42.79 lakh), Fire Detection system (for Rs.21.04 lakh) and 'Others' (Rs.20.98 lakh). In justification of the same, the Petitioner has submitted that the actual additional expenditure incurred under 'Coal Handling System' package is Rs.1040 lakh in 2014-15 and Rs. 367.53 lakh in 2015-16. It has submitted that Rs.367.53 lakh capitalised in 2015-16 mostly relates to the procurement of initial mandatory spares, which was initiated and procured prior to the cut-off date (31.3.2015), while the procurement of balance spares was concluded in 2015-16. Regulation 14(1)(3) of 2014 Tariff Regulations permits the capitalization of spares up to cut-off date, in accordance with the provisions of Regulation 13 of the 2014 Tariff Regulations (4%

of Plant & Machinery cost as on the cut-off date). It is noticed that the claim of Rs.282.72 lakh towards initial spares pertains to initial spares which form part of the original scope of the Plant and Machinery. It is evident from the submissions of the Petitioner, that the procurement of spares was initiated even before the cut-off date (31.3.2015), but spares were received only during 2015-16. Since the claim of the Petitioner for additional capitalisation of Rs.282.72 lakh in 2015-16 is towards initial spares for 'Coal Handling System' after the cut-off date, the same is allowed in relaxation of Regulation 14(1)(3) of 2014 Tariff Regulations. However, the balance amount of Rs.84.81 lakh (Rs.42.79 lakh for Stone Picking shed, Rs.21.04 lakh for Fire Detection system and Rs.20.98 lakh towards 'Others') have not been allowed as the items do not form part of initial spares and no justification has also been furnished by the Petitioner for capitalization after the cut-off date.

BTG & Spare GT

49. The Petitioner, in Petition No. 152/GT/2015, had claimed projected additional capital expenditure of Rs.1616 lakh in 2015-16 towards BTG Package and the same was not allowed by the Commission in its order dated 26.12.2017. The Petitioner, in the present petition, has claimed actual additional capital expenditure of Rs.837.40 lakh for BTG package (including spares for Rs.777.30 lakh) and Rs.846.76 lakh for Spare GT in 2015-16, Rs.1.78 lakh for BTG and Rs.35.73 lakh for Spare GT in 2016-17, which are within the original scope of work of the project, but after the cut-off date. The balance amount of Rs.60.10 lakh (₹837.40 - ₹777.30) under BTG package apart from Spares is towards 'Workshop equipment' (Rs.23.83 lakh), 'Mill hoist' (Rs.15.23 lakh) and 'Others' (Rs.21.05 lakh). The Petitioner, in justification of the said claim has submitted that the expenditure mainly relates to mandatory 'Initial capital spares', which were required to be procured before the cut-off date (31.3.2015). It has, however, submitted that due to their non-critical requirement for

purpose of COD, the procurement of most of these items was initiated prior to the cut-off date from M/s BHEL, but their procurement was concluded in 2015-16. Accordingly, the Petitioner has submitted that the additional capital expenditure falls within the scope and ambit of Regulation 54 read with Regulation 8(3) and Regulation 14(3) of the 2014 Tariff Regulations.

50. The Respondent, KSEBL has submitted that the Petitioner has not furnished any details and justification for the claim and the same is not in line with Regulation 14(3) of the 2014 Tariff Regulations. It has further submitted that the BTG package was capitalized after the cut-off date and is not allowable in terms of the regulations, as the Petitioner has not furnished any valid reason for extension of procurement of the same beyond the cut-off date. Accordingly, KSEBL has submitted that the claim of the Petitioner may be disallowed. In response, the Petitioner has submitted that the cut-off date of the generating station is 31.3.2015, which is within the first year (2014-15) of the 2014-19 tariff period. The Petitioner has stated that the claim under Regulation 14(3) is inadvertent and the same may be read as Regulation 14(2) of the 2014 Tariff Regulations. Accordingly, it has submitted that the claim is within the original scope of work of the project. The Petitioner has further submitted that the contractual liability was created in 2014-15, but was reflected in 2015-16 only after supply of material was received, as in supply contracts liability is created immediately upon execution of contract and recognition in books of accounts, only after material is received along with bills. The Petitioner has also furnished the details in Annexure P/12 of the petition. The Petitioner has contended that due to force majeure condition, arising on account of multiple failures, the Petitioner had to procure the assets, the process for which had started in 2014-15. It has also added that initial spare GTs under contingency budget for deferred initial spares was procured to sustain the unit operation during any future eventuality. Therefore, the

Petitioner has stated that the additional capital expenditure claimed falls within the scope of Regulations 14(3)(iii) and 14(3)(v) read with Regulation 54 of the 2014 Tariff Regulations.

51. In addition, the Petitioner has submitted that for key initial spares, such as BCW pump, journal shaft, workshop, IA compressor spare, High energy drain valve, HP plunger pump, Mill hoist for Unit-2, Instrumentation capital spares and Spare GT, the procurement of these spares were initiated prior to the cut-off date, but the OEM could deliver these items only after the cut-off date. It has been stated that these items are urgently required for the operation of the generating station and by procurement of these spares after the cut-off date, no extra cost had occurred to the beneficiaries. The Petitioner has further stated that in terms of Regulation 13 of the 2014 Tariff Regulations, the capitalisation of initial spares is limited to 4.0% of Plant & Machinery cost up to cut-off date for coal-based/ lignite-fired thermal generating stations. It has submitted that the total Plant & Machinery cost up to cut-off date is Rs.2821.82 crore and in terms of Regulation 13 of the 2014 Tariff Regulations, the amount of Initial spares to be capitalised is limited to Rs.112.87 crore i.e. (4% of Rs.2821.82 crore). The Petitioner has pointed out that initial spares of Rs.71.64 crore, capitalised till 2013-14, were approved in the order dated 26.12.2017 in Petition No. 152/GT/2015 and further, initial spares of Rs.14.83 crore and Rs.21.53 crore have been procured and capitalized under various packages during the years 2014-15 and 2015-16 respectively. The summary of initial capital spares, as furnished by the Petitioner is as under:

(Rs. in crore)

Initial Spares	**Amount**
Initial Spares supplied till 31.3.2014 (A)	71.64
Initial Spares supplied during 2014-15 (B)	14.83
Initial Spares supplied during 2015-16/ 2016-17 (C)	*21.53
Total (A+B+C)	**108.00**
4% of P&M cost	**112.87**

*including BTG spare of Rs.777.30 lakh and Spare GT of Rs.846.76 lakh

52. Thus, the total value of Initial spares procured till 2015-16 is Rs.108 crore which is within the ceiling of Rs.112.87 crore i.e. (4% of Rs.2821.82 crore), specified under Regulation 13 of the 2014 Tariff Regulations. The Petitioner has submitted that it has procured initial spares as and when it was required and some spares were procured in 2015-16, after cut-off date. Regulation 14(1)(3) of the 2014 Tariff Regulations permits the capitalization of capital spares up to the cut-off date in accordance with Regulation 13 of the 2014 Tariff Regulations (i.e. 4% of Plant & Machinery cost as on the cut-off date). It is evident from the submissions of the Petitioner that the initial spares form part of the original initial cost of the plant and machinery. The procurement of spares was initiated before the cut-off date (31.3.2015) but the OEM had delayed the delivery of the same. Since the Petitioner is entitled for initial spares up to 4% of Plant and Machinery cost, we allow Rs.777.30 lakh towards initial spares of BTG package in exercise of the power to relax under Regulation 54 of the 2014 Tariff Regulations. However, the amount of Rs.60.10 lakh (Rs.837.40 - Rs.777.30) towards BTG package which include Workshop equipment (Rs.23.83 lakh), Mill hoist (Rs.15.23 lakh) and for Others (Rs.21.05 lakh) during 2015-16 and Rs.1.78 lakh in 2016-17 have not been allowed as the capitalization has occurred after the cut-off date and reasons furnished by the Petitioner do not justify the capitalization of these assets after the cut-off date.

53. As regards claim of the Petitioner for additional capitalisation of Rs.846.76 lakh in 2015-16 and Rs 35.73 lakh in 2016-17 towards Spare GT, the Petitioner has submitted that the same may be allowed as ‘replacement’ as the original Generator Transformer (GT) procured prior to COD had failed and has been de-capitalized at its gross value of Rs.1147.14 lakh in 2014-15. This submission of the Petitioner has been verified from the list of assets de-capitalized in 2014-15 and it is noticed that

GT has been de-capitalized at the aforesaid gross value, which is more than the cost of new GT (i.e. Rs.846.76 lakh). Accordingly, the additional expenditure of Rs.846.76 lakh in 2015-16 and Rs.35.73 lakh in 2016-17 towards Spare GT is allowed for the purpose of tariff as 'replacement' since the gross value of the old asset has been de-capitalized in terms of the provisions of Regulation 14(4) of the 2014 Tariff Regulations.

Balance of Plant (BOP)

54. The Petitioner has claimed actual additional capital expenditure of Rs.445.57 lakh in 2015-16 and Rs.5.82 lakh in 2016-17 towards 'BOP' which form part of the original scope of work of the project, but after the cut-off date. The claim of the Petitioner for Rs.5.82 lakh in 2016-17 is under the head 'Others'. In justification of the said claim, the Petitioner has categorised the capitalization of this package in 2015-16, as under:

(Rs. in lakh)

Asset Description	**2015-16**
Condition Monitoring Instruments	207.20
Initial mandatory spares	185.10
Electrical System for Plant facilities	53.27
Total	**445.57**

55. The Respondent, KSEBL has submitted that the additional capitalization claimed after the cut-off date may not be allowed. In response, the Petitioner has submitted that the capitalization claimed under BOP package, beyond the cut-off date, is mainly towards the procurement of condition monitoring equipment/ testing instruments and initial spares. It has submitted that the procurement process was initiated within the cut-off date and order was placed in March 2015/ early April 2015, but the supply got concluded in 2015-16. The Petitioner has stated that the delay was on account of multiple failure of the units during the years 2013-14 and 2014-15, thereby delaying the initial stabilization of the units. It has added that on account of

this 'force majeure' condition, the additional capitalization falls under the purview of Regulation 14(3)(v) read with Regulation 54 of the 2014 Tariff Regulations (Power to relax). The Petitioner has further submitted that the additional capitalization for assets which form part of the original scope of the project, but also have life of more than one accounting period and is an integral part of the existing assets. Hence, such expenditure incurred are capital in nature and are not charged to O&M expenses in the books of accounts of the Petitioner.

56. We examine the claims of the Petitioner in following paragraphs.

(a) Condition Monitoring Instruments

57. The Petitioner has submitted that Regulation 46 of the Central Electricity Authority (Technical Standards for Construction of Electrical Plants and Electric Lines) Regulations, 2010 specifies standards for Condition Monitoring of Electrical equipment. It has submitted that the procurement process of testing instruments was initiated on 13.8.2014 (within the cut-off date) after finalizing the specifications and the bidding process was initiated and Purchase order was issued to qualified supplier on 6.4.2015. The equipment was procured in batches in order to lessen the burden of cost in one year. The Petitioner has also submitted that major procurement was done in 2015-16 for Rs.207.20 lakh and the remaining equipment were purchased in 2016-17. The Petitioner has submitted that since the said expenditure has been incurred in furtherance to the Regulations specified by CEA, the expenditure incurred squarely falls within the scope of Regulation 14(3)(ii) of the 2014 Tariff Regulations.

58. We have considered the submissions of the Petitioner. Since the additional capital expenditure for Rs.207.20 lakh for Condition Monitoring of Electrical equipment has been incurred in compliance with the CEA (Technical Standards for

Construction of Electrical Plants and Electric Lines) Regulations, 2010, the same is allowed to be capitalised under Regulation 14(3)(ii) of the 2014 Tariff Regulations.

(b) Initial mandatory spares

59. The Petitioner has claimed initial mandatory spares for Rs.185.10 lakh and has stated that these mandatory spares were procured as and when they were required and some spares were procured in 2015-16 i.e. after cut-off date. The Petitioner has stated that the same is within the ceiling of initial spares as per the provisions of the 2014 Tariff Regulations.

60. We have considered the submissions. The claim of the Petitioner for Rs.185.10 lakh towards mandatory spares pertain to initial spares which form part of the original scope of the Plant and Machinery. It is evident from the submissions of the Petitioner that the procurement of the spares was initiated before the cut-off date (31.3.2015), but were received only during 2015-16. Accordingly, the claim of the Petitioner for additional capitalisation of Rs.185.10 lakh in 2015-16 towards initial spares for 'BOP spares' after the cut-off date is allowed under Regulation 14(1)(3) of 2014 Tariff Regulations, in exercise of the power to relax.

(c) Electrical system for Plant facilities

61. The Petitioner has submitted that facilities like field hostel, gate house and canteen were delayed due to land issues and local agitation as explained under "General Civil Works" package. Hence, the capitalization of electrical system was carried out in 2015-16 when these facilities where commissioned and an amount of Rs.53.27 lakh was capitalized in 2015-16. The Petitioner has submitted that these assets are within the original scope of work, but due to various force majeure conditions faced by the Petitioner, the commissioning of such assets were delayed and was finally completed beyond the cut-off date.

62. It is observed that the electrical system for facilities i.e. field hostel, gate house and canteen, is consequential to 'General Civil Works' which were delayed due to land non-availability and the same are for reasons beyond the control of the Petitioner as discussed in paragraph 46 above. In this background, the additional capitalization of Rs.53.27 lakh in 2015-16 pertaining to Electrical system for plant facilities is allowed under Regulation 14(3)(i) of the 2014 Tariff Regulations. In support of the claim for Rs.5.82 lakh during 2016-17, the Petitioner has submitted that the amount corresponds to "Others" but has not mentioned the nature of items capitalized and the necessity of such capitalization. In view of the above, capitalization of Rs.5.82 lakh during 2016-17 is not allowed.

New Schemes in 2015-19

63. The Petitioner has also claimed additional capital expenditure for 'New Schemes' in 2015-19, as follows, which do not form part of the original scope of work of the project and which were taken up after the cut-off date:

(Rs in lakh)

Assets/Works	2015-16	2016-17	2017-18	2018-19
Fire Tender with shed	61.53	0.60	14.47	1.30
Fixed Foam system for LDO & HFO	60.74	-	-	-
NABL Accredited Lab	70.52	112.96	5.62	55.18
Online Effluent Monitoring System	13.95	-	-	-
IT & Others	10.97	61.01	125.62	134.55
Augmentation of Track Hopper shed	268.36	-	-	
MAX DCS version up-gradation (XP) Unit-1	67.52	-	438.86	
Construction of road in Ash area	-	80.29	18.15	-
Installation of CAAQMS	-	67.58	-	-
Power supply redundancy and Re-arrangement at BOP area	-	401.59	-	-
Gate house near JNT/security infra/e-security	-	45.07	98.58	257.66
Ash Bagging	-	27.21	-	
Augmentation of Store area	-	31.74	7.58	171.16
Safety related expenditure	-	-	67.09	103.67
Augmentation of Fire detection system	-	-	80.41	-
Drinking Water System	-	-	10.07	13.16
Augmentation of Ash handling system	-	-	700.13	848.07
Fabrication of expansion bellow	-	-	49.69	23.34

Labour colony	-	-	192.79	16.08
Refurbishment of DM Plant Piping and Tank	-	-	31.98	-
Re-heater modification & MTM installation	-	-	160.29	78.23
Up-gradation of protection system	-	-	1.45	47.30
Yard sprinkling and Fire detection system in CHP	-	-	-	18.91
Coal pit run-off mechanized drainage system	-	-	-	321.88
Wind barrier in Ash Pond	-	-	-	29.90
Total additional capitalization	**553.59**	**828.05**	**2002.78**	**2120.39**
Total additional capitalization claimed as per Form 9A	**554.59**	**829.06**	**2002.40**	**2119.96**

(a) Fire Tender with shed

64. The Petitioner has claimed additional capitalization of Rs.61.53 lakh in 2015-16, Rs.0.60 lakh in 2016-17, Rs.14.47 lakh in 2017-18 and Rs.1.30 lakh in 2018-19 for Fire tender with shed under Regulation 14(3)(ii) of the 2014 Tariff Regulations. In justification for the same, the Petitioner has submitted that a fire station has been commissioned near the DM plant with intent to cover the entire plant premises in the eventuality of fire and, hence, the expenditure may be approved.

65. The Respondent, KSEBL has submitted that IS 3034 Standards were to be followed by the Petitioner at the time of design of the generating station and should have formed part of the original scope of work. The Respondent has stated that the expenditure does not fall under 'change in law' and, therefore, should not be allowed to be capitalized. In response, the Petitioner has submitted that after overcoming stabilization issues of the units, which was of utmost priority, the Petitioner had initially conducted audit/ review/ mock drills of the existing firefighting systems and their compliance with IS standards/ CEA Regulations, 2010. After review of the firefighting systems, it was observed that with the existing location of Fire Tender, it was not possible to meet the response time of 5 minutes in case of fire at the Coal Handling Plant area. The Petitioner has pointed out that the claim of NTPC towards firefighting system was allowed by the Commission in its order dated 29.7.2016 in

Petition No. 293/GT/2014 (tariff of Talcher STPS, Stage-II for the 2014-19 tariff period) subject to the report of CEA. Accordingly, the Petitioner has submitted that the additional capital expenditure claimed may be allowed.

66. IS:3034 standard which deals with fire stations in Super Thermal Power generating stations having installed capacity exceeding 1000 MW, stipulate the following:

> *"(a) As per clause no 10.3.5 "Considering the large area of Super Thermal Power Stations (Super Thermal/Power Stations Having Installed Capacity Exceeding 1 000 MW), facilitate quick turn out it may be necessary to deploy the operational manpower at two Fire Stations — a Main Fire Station and a Sub Fire Station, both having up-to-date communication facilities to help easy mobilization in case of emergency."*
>
> *(b) As per clause no 10.4.1 "Power Stations authorized for full time Fire Brigades with major firefighting appliances shall have well designed Fire Stations for housing appliances and firefighting staff. They shall be so located that the response times for fire appliances are kept to a minimum not to exceed 5 minutes*."

67. Thus, as per IS:3034 standard, the response time for reaching a fire prone area should be limited to less than 5 minutes and, if necessary, an additional sub-fire station is required to be made operational. The Petitioner has submitted that during various mock drills conducted (as per the Factories Act, 1948), it took more than five minutes to reach the premises of Coal Handling Plant (CHP) of the Petitioner, which is a critical area to be protected from fire, as it is situated far away from the DM Plant area. Hence, the need was felt by the Petitioner to set up another sub-fire station near CHP area to be compliant with IS:3034 standard in order to avoid any eventuality. Keeping in view that the expenditure incurred was in compliance with the IS:3034 standard (which deals with "Fire Stations in Industrial Buildings') and as the same is required for the safety and security of the plant, the additional capital expenditure incurred is allowed under Regulation 14(3)(ii) of the 2014 Tariff Regulations.

(b) NABL accredited lab, Online Effluent Monitoring system, Installation of CAAQMS, Yard sprinkling and Fire detection system, Wind barrier in Ash pond and Construction of road in Ash area

68. The Petitioner has claimed additional capitalization of Rs.70.52 lakh in 2015-16, Rs.112.96 lakh in 2016-17, Rs.5.62 lakh in 2017-18 and Rs.55.18 lakh in 2018-19 for NABL accredited lab. It has also claimed additional capitalization of Rs.13.95 lakh for 'Online Effluent monitoring system' in 2015-16. The Petitioner has claimed additional capitalization of Rs.80.29 lakh in 2016-17 and Rs.18.19 lakh in 2017-18 for Construction of road in Ash area and Rs.67.58 lakh for 'Installation of CAAQMS' in 2016-17. Also, additional capital expenditure of Rs.29.90 lakh for 'Wind barrier in Ash pond' and Rs.18.91 lakh for 'Yard sprinkling and Fire detection system' in CHP in 2018-19 has been claimed by the Petitioner. The Petitioner has submitted that these expenditures have been incurred for various schemes which were to be complied by the Petitioner based on the directions of the Jharkhand State Pollution Control Board (JSPCB) and is, therefore, covered under Regulation 14(3)(ii) of the 2014 Tariff Regulations. It has stated that the sitting arrangement of the lab technicians/ department was initially arranged in the adjoining space which was not in compliance with ISO-17025 (NABL) and, accordingly, a separate sitting arrangement was made to comply with the requirements of ISO-17025 for the lab and to comply with the mandate of Jharkhand State Pollution Control Board (JSPCB) and it being a governmental instrumentality, directions issued by it fall within the scope and meaning of Regulation 14(3)(ii) of the 2014 Tariff Regulations i.e. change in law or compliance of existing law. The Respondent, KSEBL has submitted that the expenditure incurred for establishing additional vertical extension of DM plant lack justification on perusal of the 'Consent to Operate' order and the same is not in line with the aforesaid regulation.

69. The matter has been examined. The Petitioner in support of its claim for additional capitalization of the schemes has furnished the correspondences made with JSPCB with regard to the said schemes. The schemes executed by the Petitioner are mainly to comply with the Pollution control norms and for maintaining the environment standards as per directions of JSPCB. As the Petitioner has incurred the aforesaid additional expenditure in respect of these assets/ works for compliance with the directions of JSPCB, the same are allowed under Regulation 14(3)(ii) of the 2014 Tariff Regulations.

(c) IT & Others

70. The Petitioner has claimed additional capitalization of Rs.10.97 lakh in 2015-16, Rs. 61.01 lakh in 2016-17, Rs.125.62 lakh in 2017-18 and Rs.134.55 lakh in 2018-19 for IT & others. The Petitioner, in justification of the same, has submitted that it has incurred the expenditure for replacement of IT equipment, namely laptops, computers, servers, printers, etc. and some other 'minor assets' which have been fully depreciated in the books of accounts. The Petitioner has stated that in case the generating station would have completed more than 10 years, the expenses on such items would have been managed from the Compensation Allowance eligible in terms of the 2014 Tariff Regulations. It has stated that the life of IT equipment is much less than 10 years and needs to be replaced within the said period. Therefore, there is no other means available with the Petitioner for meeting expenditure on these assets. The Petitioner has sought additional capitalization of these assets by invoking Regulation 54 of the 2014 Tariff Regulations and has submitted that the expenditure needs to be allowed on the principles enshrined under Section 61 of the Electricity Act, 2003. The Respondent, KSEBL has submitted that the additional capital expenditure falls under R&M expenses and, therefore, the same may be disallowed.

71. The matter has been examined. Admittedly, the additional capital expenditure claimed by the Petitioner is beyond the original scope of work of the project and is after the cut-off date. In this regard, the proviso to Regulation 14(3) of the 2014 Tariff Regulations provides the following:

> *"Provided that any expenditure on acquiring the minor items or the assets including tools and tackles, furniture, air-conditioners, voltage stabilizers, refrigerators, coolers, computers, fans, washing machines, heat convectors, mattresses, carpets etc. brought after the cut-off date shall not be considered for additional capitalization for determination of tariff w.e.f. 1.4.2014."*

72. In our considered view, the expenditure pertaining to IT equipment is in the nature of 'minor assets' which has been incurred after the cut-off date. Hence, in terms of the proviso to Regulation 14(3) of the 2014 Tariff Regulations, the additional capitalization of the expenditure claimed is not allowed.

(d) Fixed foam system for LDO & HFO

73. The Petitioner has claimed additional capitalization of Rs.60.74 lakh in 2015-16 for 'Fixed foam system for LDO and HFO' under Regulation 14(3)(ii) of the 2014 Tariff Regulations. The Petitioner has submitted that Foam flooding system at HFO and LDO Tank is required as per clause no 5.3.5.2 of IS 3034 standards, which stipulate as follows:

> *"5.3.5.2 The oil storage tanks should also have fixed foam fire extinguishing system in conformity with IS 12835 (Part 1): 1989."*

74. The Petitioner has referred to IS 3034:1993 and IS 12835 (Part 1): 1989 and has submitted that the additional expenditure incurred is for compliance with the provisions of the said IS standards. Though these IS standards were in place at the time of conceptualization of the generating station, since the additional capitalization is for compliance with the existing law, we allow the additional capitalization of Rs. 60.74 lakh for 'Fixed Foam system for LDO and HFO' in 2015-16 under Regulation 14(3)(ii) of the 2014 Tariff Regulations.

(e) Augmentation of Track Hopper shed

75. The Petitioner has claimed additional capitalization of Rs.268.36 lakh in 2015-16 towards 'Augmentation of track hopper shed'. In justification of the same, the Petitioner has submitted that originally, Track hopper was designed for direct unloading of coal from BOBR (Bogie Open Bottom Rapid discharge Railway Wagon) into track hopper. It has submitted that the track hopper shed was erected in 2012 with dimensions as per BOBR unloading requirements, but in the absence of rail connectivity, coal is transported through road by Hyva (a vehicle by Tata Motors) and is unloaded at coal bed/ ramp area or track hopper as per need and, thereafter, excavators/ bulldozers push the coal into track hopper. The Petitioner has stated that continuous movement of heavy vehicles for feeding coal into track hopper, coupled with impact of large size stones in coal had considerably damaged the structure of the Track hopper, which endangered the safety of personnel working there. It has submitted that additional capital expenditure under this scheme was required to be incurred due to unforeseen circumstances beyond the control of the Petitioner and could not have been anticipated or avoided, through prudent utility practices. Accordingly, the Petitioner has prayed that the Commission may allow the additional capital expenditure under this scheme, in exercise of the power under Regulation 54 (Power to relax) read with Regulation 3(25) and Regulation 8(3) of the 2014 Tariff Regulations. Alternatively, the Petitioner has submitted that the said expenditure is covered under Regulation 14(3)(iii) of the 2014 Tariff Regulations.

76. The matter has been examined. Admittedly, the additional capital expenditure claimed by the Petitioner is beyond the original scope of work of the project and is after the cut-off date. The Petitioner's submission that the additional capitalization incurred is on account of 'Force Majeure' events and the same may be allowed in

exercise of the power to relax is not acceptable, as the submissions made by the Petitioner do not demonstrate the existence of any 'force majeure' events. Alternatively, the prayer of the Petitioner to allow the said claim under Regulation 14(3)(iii) of the 2014 Tariff Regulations is also not acceptable, as the Petitioner has not furnished any documentary evidence indicating that the expenditure has been incurred for higher security or safety of plant as advised or based on directions of the Appropriate Governmental agencies or Statutory authorities responsible for national/ internal security. In view of this, the additional capitalization claimed by the Petitioner under this head is not allowed.

(f) MAX DCS Version up-gradation (XP) Unit-1 (New schemes required on account of obsolescence)

77. The Petitioner has claimed additional capitalization of Rs.67.52 lakh in 2015-16 and Rs.438.86 lakh in 2017-18 for 'MAX DCS version Up-gradation (XP) Unit-1' in exercise of the power to relax under Regulation 54 of the 2014 Tariff Regulations. In justification of the same, the Petitioner has submitted the following:

> (a) Digital Control System (DCS) is the automated intelligence of any thermal power generating station. Windows XP operating system was the most popular and reliable Windows platform provided by all leading industrial automation companies for their control system. However, from 8.4.2014, Microsoft has completely withdrawn the support for Windows XP Operating System. With end of support by Microsoft on Windows XP operating system, it stopped developing Security Patches for Windows XP, non-security hot fixes, online technical content updates and telephone support. Hence, system was more vulnerable for malware attack and had become out-dated.
>
> (b) The Petitioner managed the system with existing inventories and support from BHEL till mid of 2016. However, after mid of 2016, M/s BHEL expressed its inability to provide further support and recommended for complete up-gradation of existing DCS to higher version of Windows Operating System with upgraded version of MAX DNA DCS for Maithon Units to ensure services and necessary spares. Accordingly, MAX DCS up-gradation for Unit-1 was taken up in 2017-18.

78. The Respondent, KSEBL has submitted that the additional capital expenditure incurred is in the nature of R&M expenses and, hence, may not be allowed. In response, the Petitioner has submitted that the expenditure has been incurred on

account of obsolescence and force majeure conditions which was not within the control of the Petitioner. It has stated that though Microsoft had withdrawn its support for Windows XP Operating System on 8.4.2014, the Petitioner with all its efforts and existing inventory managed to maintain the system till 2016-17, but had to undertake such replacements when M/s BHEL stopped extending its support after mid of 2016 and strongly recommended to upgrade to higher versions. The Petitioner has stated that the same could not have been avoided and due to such uncontrollable factors, it had to incur a one-time expenditure towards such up-gradation, and is in no way a recurring expenditure that can be booked under R&M expenses.

79. The matter has been examined. The Petitioner has submitted that the Digital Control System (DCS) has become obsolete as Microsoft had completely withdrawn its support for Windows XP Operating System. Max DNA version 6.x.x on Windows 7 was envisaged to replace the earlier version i.e. Max DNA version 4.x.x on Windows XP. The Petitioner has furnished the recommendations of OEM (M/s BHEL) confirming that further sustenance of the system was not possible. Considering the submissions of the Petitioner and the documents furnished and keeping in view that the additional expenditure was incurred by the Petitioner under circumstances which were beyond its control (on account of obsolescence of Windows XP for DCS), the additional capital expenditure claimed is allowed, in relaxation of Regulation 14(3)(vii) of the 2014 Tariff Regulations.

(g) Gate House Near JNT/ Security infra/ E-security

80. The Petitioner has claimed additional capital expenditure of Rs.45.07 lakh in 2016-17, Rs.98.58 lakh in 2017-18 and Rs.257.66 lakh in 2018-19 under Regulation 54 (Power to relax) read with Regulation 14(3)(iii) of the 2014 Tariff Regulations for construction of gate house near JNT equipped with turnstile gate and strengthening

of e-Security system for main gate, labour gate and the plant premises. In justification of the said claim, the Petitioner has submitted that these works were necessitated on account of increasing security incidents due to local agitations, strikes, dharna and increasing instances of theft etc.. The Petitioner has also submitted that the turnstile gates have dual authentication with access card as the first and biometric as the other. It has further stated that Boom barriers, one for entry road and one for exit road have been constructed and also RFID system has been installed for automated gate operation.

81. The Respondent, KSEBL has submitted that expenditure claimed is covered under the security expenses allowed to the Petitioner, over and above the normative O&M expenses. In response, the Petitioner has submitted that the plant is spread over 1116 acres of land and is situated in a region having less employment and is a stronghold of Maoists, which poses a high security threat to the installations and workforce of the plant. It has further submitted that since inception, it is continuously facing a lot of law and order problems like agitation, gate jams, trespassing, thefts by displaced persons, supported by political outfits and such facts had been observed by the Intelligence Bureau, GOI in its report dated 10.1.2019. The Petitioner has added that due to delay in the commissioning of Railway project, owing to Force Majeure conditions, coal is transported through trucks (about 1200-1600 per day) and the security staff had to oversee all these along with patrolling and monitoring which was difficult for them and was prone to human error, due to fatigue.

82. The matter has been considered. Admittedly, the additional capital expenditures claimed by the Petitioner is beyond the original scope of work of the project and is after the cut-off date. The Petitioner's submission that the additional capitalization has been incurred is on account of Force Majeure events and the

same may be allowed in exercise of the power to relax is not acceptable, as the submissions made by the Petitioner do not demonstrate the existence of any force majeure events. Alternatively, the prayer of the Petitioner to allow the said claim under Regulation 14(3)(iii) of the 2014 Tariff Regulations is also not acceptable, as the Petitioner has not furnished any documentary evidence indicating that the expenditure incurred is for higher security or safety of plant as advised or is based on the directions of the Appropriate Governmental agencies or Statutory authorities responsible for national/ internal security. In view of this, the additional capitalization claimed by the Petitioner under this head is not allowed.

(h) Power Supply redundancy and re-arrangement at BOP area and Augmentation of Store area

83. The Petitioner has claimed additional capital expenditure of Rs.401.59 lakh in 2016-17 for 'Power Supply redundancy and re-arrangement at BOP area' and Rs.31.74 lakh in 2016-17, Rs.7.58 lakh in 2017-18 and Rs.171.16 lakh in 2018-19 towards 'Augmentation of Store area' under Regulation 3(25) read with Regulation 54 of the 2014 Tariff Regulations. In justification of the same, the petitioner has submitted the following:

(i) Power Supply Redundancy and Re-arrangement at BOP area: Frequent tripping of 11 kV CPS overhead line due to breaking of insulators and other overhead line components due to storm and lightning were leading to shutdown of essential load. Further, underground Cable fault of the single source was leading to shutdown of supply of the vital load along approach road for a longer time as it requires considerable time locating and repairing the fault. Moreover, frequent disruption of lighting load and supply of Gate house was becoming major concern of safety and security of the persons and the plant. It was, therefore, decided to form a 6.6 kV Ring Mains Unit by sourcing of 2 numbers of 6.6 kV outgoing feeders from existing 6.6 kV ER #1 switchboard to form a 6.6 kV network with low cost Compact Sub Stations at different load centres to feed such critical loads.

(ii) Augmentation of Store area: In view of the increased Inventory levels in volume and high value spares and to avoid damage of the equipment due to bad weather/ temperature, the need for a sufficient and proper storage facility,

both open and covered, equipped with additional racking/ handling infrastructure was felt. Accordingly, the Petitioner has undertaken augmentation of the store area which broadly includes (i) Concreting and securitization of additional space admeasuring 200 m x 100 m for the purpose of storage of material along with road and pathways, (ii) Development of shed of specification 50 m x 100 m in the open yard of the existing store and (iii) Installation of heavy duty racks and procurement of material handling machines like forklift, crane etc.

84. The Respondent, KSEBL has submitted that expenditure incurred is as a result of poor planning which is attributable to the Petitioner and, therefore, may not be allowed and cannot also be classified as a force majeure event. In response, the Petitioner has submitted that existing overhead line of 11 kV installed for the purpose of construction supply was being utilized for supplying power to some of the essential load like gate house complex, field hostel, site office, etc. It has stated that with passage of time, tripping of these overhead lines had increased because of failures of insulators, breaking of the conductor, damage on account of the movement of coal trucks, which was initially not envisaged and was beyond the control of the Petitioner. Accordingly, the Petitioner has submitted that the expenditure may be allowed in exercise of the power under Regulation 54 or, alternatively, under Regulation 14(3)(iii) of the 2014 Tariff Regulations.

85. The submissions have been considered. The Petitioner's submission that the additional capitalization incurred is on account of 'Force Majeure' events and, hence, the same may be allowed in exercise of the power to relax is not acceptable, as the submissions made by the Petitioner do not indicate the existence of any force majeure events. In our view, the works executed by the Petitioner are only an extension/ rearrangement of the existing system in the generating station. Alternatively, the prayer of the Petitioner to allow the said claim under Regulation 14(3)(iii) of the 2014 Tariff Regulations is also not acceptable, as the Petitioner has

not furnished any documentary evidence indicating that the expenditure incurred is for higher security or safety of plant as advised or is based on the directions of the Appropriate Governmental agencies or Statutory authorities responsible for national/ internal security. In view of this, the additional capitalization claimed by the Petitioner under this head is not allowed.

(i) Ash Bagging system

86. The Petitioner has claimed additional capital expenditure of Rs.27.21 lakh in 2016-17 for 'Ash Bagging system' under Regulation 3(25) read with Regulation 8(3) and Regulation 54 of the 2014 Tariff Regulations. The Petitioner has submitted that 'Ash bagging system' has been installed to facilitate dry fly ash to be packed in the bags directly from silo discharge points and, thereafter, dry fly ash filled in bags are transported through rail/ trucks, for onward transportation and utilization. It has submitted that additional capital expenditure of Rs.27.21 lakh has been incurred in 2016-17 for installation of 'Ash bagging system' to optimally utilize the fly ash and was in compliance of with the directions of JSPCB vide notice dated 17.5.2013. Accordingly, it has submitted that the additional capitalization may be allowed under Regulations 14(3)(ii) and 14(3)(iii) read with Regulation 54 of the 2014 Tariff Regulations.

87. The matter has been considered. The notice dated 17.5.2013 of JSPCB indicates that the Petitioner is required to comply with the direction of the Board regarding usage of 100% fly ash. As the additional expenditure incurred was in compliance with the directions of JSPCB, which is a statutory authority, we allow the additional capitalization claimed under Regulation 14(3)(iii) of the 2014 Tariff Regulations.

(j) Up-gradation of RTU/Protection system

88. The Petitioner has claimed additional capitalization of Rs.1.45 lakh in 2017-18 and Rs.47.30 lakh in 2018-19 towards 'Up-gradation of RTU/protection system' under Regulation 14(3)(ii) of the 2014 Tariff Regulations. In justification of the same, the Petitioner has submitted the following:

> *"(a) That the matter for Upgradation/replacement of old Remote Terminal Unit (RTU) in Eastern Region for reporting of old RTU/Substation Automation System (SAS) to back up control center over IEC 60870-5-104 has been discussed in a special Project review meeting held on 14.2.2017 at Eastern Reginal Power Committee (ERPC), 35th TCC/ERPC meeting held on 24th / 25th February 2017 and also in 19th SCADA O&M meeting held on 7.4.2017. As advised by ERPC in 35th TCC/ERPC meeting, detailed report has been finalized and approved in 36th TCC/ERPC board meeting held on 13th/ 14th September 2017 at Bhubaneshwar. In view of above direction of ERLDC/ERPC, the Petitioner was mandated to upgrade the RTU system and seek additional license from OEM for enabling existing RTUs for reporting over IEC 104 protocol to Main as well as back-up Control Centre of ERLDC. Therefore, the Petitioner prays to the Commission to consider the circumstances as under compliance of existing law and allow capitalization under this head. The expenditure incurred therefore squarely falls within the scope of Regulation 14 (3)(ii) of 2014 Tariff Regulations."*

89. Since the total additional capitalization of Rs.48.75 lakh (Rs.1.45 lakh and Rs.47.30 lakh) for up-gradation of RTU or protection system has been based on discussions in various ERPC meetings and has been incurred by the Petitioner in compliance with the mandate of ERLDC/ERPC towards safety features of protection system, we allow the same under Regulation 14 (3)(ii) of 2014 Tariff Regulations.

(k) Safety related expenditure

90. The Petitioner has claimed additional capitalization of Rs.67.09 lakh in 2017-18 and Rs.103.67 lakh in 2018-19 for 'Safety related expenditure' (i.e. scaffolding for Boiler, Insulated sky lift, construction of high-rise maintenance platform) under Regulations 14(3)(iii) of 2014 Tariff Regulations. Regulation 14(3)(iii) of the 2014 Regulations provides for admissibility of expenditure for higher security and safety, based on the advice of the Appropriate Government agency or statutory authorities responsible for national/ internal security. As the Petitioner has not demonstrated that the additional expenditure claimed is based on advice or direction of any

Governmental agency or statutory authorities, the additional capitalization of the same is not allowed.

(I) Coal Pit Run-off mechanised Drainage system

91. The Petitioner has claimed additional capitalisation of Rs.321.88 lakh in 2018-19 towards Coal Pit Run-off mechanised Drainage system, under Regulation 3(25) read with Regulation 54 of the 2014 Tariff Regulations. In justification of the same, the Petitioner has submitted the following:

> *(i) The three runoff pits near Stacker Reclaimer, track hopper and crusher house are provided to store internal drainage. Any spill over from these pits are stored in another runoff pit located near main entrance gate on the western side of the Plant. Topography of the northern area outside and near the plant is such that runoff of this area enters the plant campus, travels around 200 m inside plant and thereupon goes outside the plant through western side of the Plant. During heavy rainy seasons, such storm water enters the plant coal handling area carrying coal dust with it and gets mixed with the runoff pit near gate. In an event of spill over due to flooding of pit, the outflow of this pit crosses the Nirsa-Jamtara road through a culvert and finds its way to Rani Talab due to natural slope of the area. The accumulation of the runoff water was also causing failure of the wall. Many villagers started agitation on the belief that the Petitioner is discharging contaminated process water from the plant to the outside environment. Letter from village community leader to the Petitioner complaining regarding discharge of contaminated water (which actually is rainwater) is annexed;*
>
> *(ii) Based on the experience of flooding of the storm water drain with the coal handling area runoff water during the monsoon season, the Petitioner reviewed the existing drains to arrive at a long-term solution to avoid flooding under all rainfall conditions. It was, therefore, decided that the storm water drains from outside plant boundary be diverted along the northern boundary preventing mixing with the internal drainage water or flooding the pit located near main entrance gate and ultimately to be discharged into the culvert on Nirsa-Jamtara road beyond the boundary wall. This way the excess water from outside the plant boundary will not flood the run-off pit 2 near main gate and only clean water would be diverted outside the plant, which shall address the concern raised by villagers as stated above. Accordingly, the scheme was conceptualized and proper drainage system was constructed for its natural flow without any contamination outside the plant. However, the construction work beyond the Petitioner's boundary was forcefully stopped by the local community and their leaders as they were still of the belief that diverted water would be/may be contaminated, through an agitation on 18.6.2018 disrupting plant operation and supply of coal. A True Copy of newspaper cutting in this regard is annexed;*
>
> *(iii) Though all the efforts have been made by the Petitioner to explain the local community leaders, but the Petitioner was not permitted to carry out the work of extending the drainage system into the culvert on Nirsa-Jamtara Road. Accordingly, the Petitioner vide its Letter dated 17.8.2018 apprised Sub-Divisional Officer (SDO) Dhanbad about the Scheme undertaken for addressing the concern raised by neighbouring community, however, due to agitation by the community leaders on 18.6.2018 the same was stopped. In view of above developments, it was, therefore, further decided to have alternative disposal methodology for the coal area runoff water during the monsoon season. Under this Project, it has been decided to divert the*

excess water into Ash Pond through pumping and piping arrangement and containing the coal dust mixed run-off water within Coal Storage area;

(iv) Pursuant to the above, the Petitioner had to mandatorily undertake following works addressing the concerns of villagers for the reasons beyond the control of itself as under:

(a) Construction of the drainage system for natural flow of storm water entering through northern area near the plant and preventing it from mixing with the contaminated water;

(b) To divert Coal run off disposal into Ash pond (during monsoon season) through a pumping and piping arrangement;

(c) To contain the coal dust mixed run off water within coal storage area.

92. The Petitioner has submitted that the additional capital expenditure claimed was incurred due to circumstances, which were unforeseen and beyond the control of the Petitioner and the same was neither anticipated nor could have been avoided through any prudent utility practice. Accordingly, the Petitioner has prayed that the Commission may allow the additional capital expenditure under this scheme in exercise of the power under Regulation 54 of the 2014 Tariff Regulations. The Petitioner has also submitted that in addition to the additional expenditure incurred for 2018-19 as above, an expenditure of Rs.400 lakh for balance work is envisaged to be taken up during 2019-20.

93. The Respondent, KSEBL has submitted that the expenditure incurred by the Petitioner is due to poor planning and is, therefore, attributable to the Petitioner. It has also stated that claim is not in line with provisions of the 2014 Tariff Regulations and is not on account of any force majeure event. The Petitioner in its rejoinder has submitted that the storm water used to mix with coal dust and run-off pit near the gate and in event of flooding of the pit, the outflow of this used to flow in the Rani Talab due to natural slope of the area leading to widespread resistance from the villagers along with their political leaders. Accordingly, the Petitioner has submitted

that due to unforeseen circumstances, the expenditure incurred may be allowed in terms of Regulation 54 of the 2014 Tariff Regulations.

94. The matter has been examined. It is observed from the submissions and the documents enclosed that the Petitioner was required to undertake the construction of the drainage system, in order to address the concerns of the neighbouring community as the contaminated storm water from the plant area during monsoon season was overflowing to the natural reservoir (Rani Talab) located in a nearby village. The correspondence made with the community representatives, Sub-Divisional Officer ("SDO") Dhanbad and newspapers cuttings furnished by the Petitioner indicate that the expenditure incurred was necessary due to unforeseen conditions, which could not be apprehended during the construction stage of the plant. We note that Regulation 3(25) of the 2014 Tariff Regulations defines 'Force Majeure' conditions which prevent the timely completion of the project and as such, the expenditure is not covered under Regulation 3(25) as the plant is in operational stage. However, considering the fact that the said expenditure was necessitated to due to unforeseen circumstances, we allow the additional capitalisation of Rs 321.88 lakh under Regulation 14(3)(ii) of the 2014 Tariff Regulations.

(m) Augmentation of Ash handling system

95. The Petitioner has claimed additional capitalisation of Rs.700.13 lakh in 2017-18 and Rs.848.07 lakh in 2018-19 towards 'Augmentation of Ash handling system' under Regulation 3(25) read with Regulation 54 of the 2014 Tariff Regulations. The Petitioner has also submitted that the additional expenditure claimed is covered within the scope of Regulation 14(3)(ii) of the 2014 Tariff Regulations. The Petitioner has submitted that the additional capitalization claimed is beyond the original scope of work of the project and has been incurred due to "force majeure" events which

were beyond the control of the Petitioner. In justification of the same, the Petitioner has submitted the following:

a) The Petitioner has been facing acute operational and maintenance issues in its 'Ash handling system', primarily on account of combined effect of (i) significantly higher volume of ash generated than design capacity (ii) higher ash particle size and bulk density compared to design and (iii) Lower GCV leading to higher quantity of coal consumption and in turn increasing the effect of (i) and (ii) above.

b) The problems are mainly attributable to the poor quality of the coal received from various sources of Central Coalfield Limited and its subsidiaries. The coal received at the plant contains much higher ash than anticipated since its inception.

c) High quantity and coarser quality of ash posed pressure on the existing ash disposal system in proper handling of both fly ash and bottom ash leading to frequent leakages in ash conveying pipelines, thereby causing higher dust in environment and faster filling of limited capacity ash pond. In fact, there were specific directions from JSPCB for reduction of fugitive dust around ash pond and fly ash silo area in their letter dated 5.07.2016.

96. In view of the above submissions and since the additional capital expenditure incurred is based on the directions of JSPCB vide its letter dated 5.7.2016, the additional capital expenditure claimed is allowed under Regulation 14(3)(ii) of the 2014 Tariff Regulations.

(n) Drinking Water Facility

97. The Petitioner has claimed additional capitalization of Rs.10.07 lakh in 2017-18 and Rs.13.16 lakh in 2018-19 towards 'Drinking water facility' under Regulation 14(3)(ii) of the 2014 Tariff Regulations. In justification of the same, the Petitioner has submitted that Chapter III Section 41(d) of the Bihar Factories Rules, 1950 read with the Factories Act, 1948, as adopted by the State of Jharkhand, requires that 'the number of water centres to be provided shall be one 'centre' for every 150 persons employed at any one time in the factory'. According to this Rule, the number of drinking water centre should be one, for every 150 persons employed at any given time in the factory. The Petitioner has submitted that since many of the worker's

areas are widespread in the generating station, the number of workers in high concentration areas were more than '150 per centre' unless the workers travel to farther water centres. Therefore, the Petitioner has submitted that in order to reduce the overall travel time and in order to comply with the said Rule, it was decided to add drinking water facilities in three additional locations of the plant area viz., CHP area, Ash pond area and Coal weighbridge, which was concentrated with maximum number of workers. According to the Petitioner, since the additional expenditure incurred was in compliance of an existing law, the additional expenditure may be allowed to be capitalized in terms of Regulation 14(3)(ii) of the 2014 Tariff Regulations.

98. In consideration of the submissions of the Petitioner and keeping in view that the said additional expenditure incurred is for compliance with the provisions of the existing law i.e. the Bihar Factory Rules, 1950, we allow the additional capitalization claimed under Regulation 14(3)(ii) of the 2014 Tariff Regulations.

(o) Other Schemes

99. The Petitioner has also claimed additional capitalization of Rs.49.69 lakh in 2017-18 and Rs.23.34 lakh in 2018-19 for Fabrication of expansion bellow, Rs.192.79 lakh in 2017-18 and Rs.16.08 lakh in 2018-19 for Labour Colony, Rs.160.29 lakh in 2017-18 and Rs.78.23 lakh in 2018-19 for Re-heater Modification & MTM installation, Rs.80.41 lakh in 2017-18 for 'Augmentation of Fire detection system' and Rs.31.98 lakh in 2017-18 for 'Refurbishment of DM Plant Piping and Tank'. The Petitioner has claimed additional capitalization of the expenditure incurred on the ground of force majeure events and has accordingly prayed that the claim may be allowed under Regulation 3(25) read with Regulation 54 of the 2014 Tariff Regulations.

100. The matter has been examined. Admittedly, the claim of the Petitioner for additional capital expenditure is in respect of the assets/ works which do not form part of the original scope of work of the project and is after the cut-off date. It is observed that the works executed by the Petitioner are related to extension/ re-arrangement/ replacement of the existing systems in the generating station. The Petitioner has also not justified the nature of the 'force majeure' events which necessitated the additional expenditure being incurred on these assets/ works. In view of this, we find no reason to exercise the power to relax the provisions of the 2014 Tariff Regulations. Accordingly, the additional capital expenditure claimed under this head is not allowed.

Additional Capital Expenditure allowed

101. In view of the above discussions, the actual additional capital expenditure allowed for the 2014-19 tariff period is as under:

(Rs. in lakh)

Sl. No.	Package Name	2014-15	2015-16	2016-17	2017-18	2018-19
1	BTG	730.69	777.30	0.00	0.00	0.00

27	IDC in the above	144.82	349.53	0.00	0.00	0.00
A	**Total additional capitalization allowed**	**34679.91**	**11705.92**	**481.12**	**1400.60**	**3596.05**

102. The Petitioner has included IDC capitalized in books, excluding Railways, in the additional capitalization as per Form 9A. However, the same has been deducted by the Petitioner in Form 1(I) while claiming capital cost for tariff.

103. Accordingly, the net additional capitalization allowed after considering the de-capitalization/ deduction and before adjustment of liabilities and IDC as per books, is as under:

(Rs. in lakh)

		2014-15	2015-16	2016-17	2017-18	2018-19
A	**Total additions allowed**	**34679.91**	**11705.92**	**481.12**	**1400.60**	**3596.05**
B	Less: De-capitalization allowed	3214.56	131.14	69.61	132.63	81.37

104. The net additional capital expenditure allowed after adjustment of un-discharged liabilities is as under:

(Rs. in lakh)

	2014-15	2015-16	2016-17	2017-18	2018-19
Net additional capitalization allowed	25958.59	11478.22	218.97	550.49	3164.22
Less: Un-discharged liabilities *(pertaining to additional capitalization allowed)*	391.10	71.03	163.06	0.00	0.00
Net additional capitalization allowed on cash basis	**25567.49**	**11407.19**	**55.91**	**550.49**	**3164.22**

Normative IDC on excess equity and on actual loan

105. The Petitioner, vide Form-1 of the petition, has claimed the following amounts of normative Interest during Construction (IDC) on excess equity and on actual loan in respect of additional capital expenditure for the 2014-19 tariff period:

(Rs. in lakh)

	2014-15	2015-16	2016-17	2017-18	2018-19	Total
Normative IDC on excess equity	62.39	199.52	41.00	192.37	429.04	**924.32**
Normative IDC on actual loan	2672.02	485.50	69.39	200.82	230.48	**3658.21**

106. As regards allowance of IDC, Regulation 11 of the 2014 Tariff Regulations provide as below:

> "*11. Interest during construction (IDC), Incidental Expenditure during Construction (IEDC)*
>
> *(A) Interest during Construction (IDC):*
> *(1) Interest during construction shall be computed corresponding to the loan from the date of infusion of debt fund, and after taking into account the prudent phasing of funds up to SCOD.*
>
> *(2) In case of additional costs on account of IDC due to delay in achieving the SCOD, the generating company or the transmission licensee as the case may be, shall be required to furnish detailed justifications with supporting documents for such delay including prudent phasing of funds:*
>
> *Provided that if the delay is not attributable to the generating company or the transmission licensee as the case may be, and is due to uncontrollable factors as specified in Regulation 12 of these regulations, IDC may be allowed after due prudence check:*
>
> *Provided further that only IDC on actual loan may be allowed beyond the SCOD to the extent, the delay is found beyond the control of generating company or the transmission licensee, as the case may be, after due prudence and taking into account prudent phasing of funds."*

Normative IDC on Additional Capitalization

107. The Petitioner has submitted that normative IDC may be allowed in terms of the judgment of APTEL dated 3.10.2019 in Appeal No. 231/2017 (Power links Transmission Limited V CERC & ors). The Petitioner has submitted that the entire expenditure on additional capitalization has been incurred from internal resources/ equity and no actual loan was/is proposed to be taken for such expenditure. Since 70% of such internal funds, which are in excess of 30% normative equity, are treated as normative loan for the purpose of tariff determination under the 2014 and 2019 Tariff Regulations, interest on excess over 30% out of total internal funds before capitalisation needs to be treated as normative IDC and added to cash to arrive at the additional capitalisation for purpose of tariff.

108. It is observed that the Commission in its order dated 20.4.2017 in Petition No. 514/TT/2014 (Powerlinks Transmission Ltd v PGCIL & ors) had disallowed normative IDC on additional capitalisation done through internal resources. Aggrieved by the disallowance of normative IDC, Powerlinks Transmission Ltd. had filed Appeal No. 231 of 2017 before the Appellate Tribunal for Electricity (in short 'APTEL') with the prayer to allow normative IDC on normative loan, considered for funding the additional capitalization for the 2014-19 tariff period. APTEL vide its judgment dated 3.10.2019 held as follows:

> *"8 (ix) The Central Commission should have taken into consideration the aspect that whatever be the types of funds it is never free of cost. There is always a cost of funding. The argument that no actual loan for additional capital expenditure was taken and therefore it is not admissible for any normative IDC is wrong. It is the commercial decision of the Appellant whether to borrow the money from the market for the purpose of additional capitalisation or use its internal accruals. In either case, the capitalisation deserves to be given the Interest During Construction. For the simple reasons that if the internal accruals were not to be used as additional capital than it would have been invested in the market in any interest earning instrument. Additional capitalisation is therefore entitled to be compensated in terms of normative IDC. The Central Commission should have considered this aspect that no funds are free funds."*

109. The Petitioner, in the present petition, based on the aforesaid decision of APTEL in Powerlinks case, has computed the normative IDC on 70% of the average funds deployed during the year for the additional capitalization claimed. The Petitioner has furnished the computation of normative IDC as follows:

a) Computation of Capital Works in Progress (CWIP) Schedule during the year:

i. The Petitioner has first computed the opening and closing amounts of Capital Works In Progress (CWIP) actually incurred in cash (cash CWIP) by subtracting Un-discharged liabilities from CWIP amounts on corresponding dates. Similarly, cash additional capitalization has been simply referred to as additional capitalization for this purpose.

ii. Since the closing amount of CWIP during a financial year is obtained after subtracting additional capitalisation during the year, CWIP schedule during the year is considered as the sum of CWIP schedule obtained by opening and closing amounts of CWIP and that for additional capitalisation;

iii. While CWIP schedule obtained by opening and closing amounts of CWIP is assumed to increase or decrease linearly from opening to closing amounts, the CWIP schedule for additional capitalisation is assumed to increase linearly from zero in the beginning to the amount of additional capitalisation in the mid of the year;

iv. The said assumption is based on the fact that the Commission considers average of opening and closing GFA i.e. additional capitalisation at the mid of the year, for the purposes of computing equity, loan and depreciation. Hence, for capitalisation to take place in mid of the year, entire CWIP for that capitalisation must have been incurred up to mid of the year.

b) Computation of normative IDC on normative loan used in CWIP schedule:

i. Average CWIP has been obtained as sum of (a) average of opening and closing CWIP for entire year (opening CWIP + closing CWIP)/2 and (b)

average of additional capitalisation up to mid-year (0+additional capitalisation)/4.

ii. The Petitioner has then considered excess equity of CWIP in a financial year as the normative loan during that year and normative IDC has been computed on average normative loan at Weighted Average Rate of Interest on long term loan for that year;

iii. Therefore, total normative IDC has been computed as sum of IDC on excess equity of average additional capitalisation and IDC on excess equity of average of opening and closing amounts of CWIP.

c) Computation of IDC Capitalized

i. Since CWIP is assumed to be capitalised in the mid of the year, a part of normative IDC up to mid of the year has been capitalised depending upon the amount of additional capitalisation out of total CWIP in the mid of the year and balance normative IDC during the year is carried forward to the next year:

ii. For the purpose of capitalisation of IDC, it is assumed that CWIP incurred first would be capitalised first. Hence, once the opening CWIP increases to the value of additional capitalisation during the year, IDC related to this CWIP up to half year is capitalised and balance is carried forward:

iii. In case, the opening CWIP is more than additional capitalisation during the year, additional capitalisation is done from the opening CWIP and normative IDC to be capitalised for half year would be 70% x additional capitalisation x 0.5:

110. The Petitioner has prayed for approval of the above methodology for computation of normative IDC and to include the same in the additional capitalization of various assets capitalized during the 2014-19 period and projected to be capitalized during the 2019-24 period. The Petitioner has also submitted the normative IDC computation and the management certificate on the amounts of CWIP.

111. We have considered the submissions of the Petitioner. It is noticed that the Petitioner has neither submitted the normative IDC, duly certified by Auditors, nor the date of infusion of funds, the corresponding dates of capitalisation, the applicable interest rates etc. and their supporting documents, if any. Hence, in the absence of the aforesaid information, we have worked out the normative IDC based on assumptions as follows:

a. Infusion of funds has been assumed to be at the beginning of the year of additional capital expenditure incurred;

b. Date of capitalisation has been assumed to be at the mid of the year; and

c. Weighted Average Rate of Interest (WAROI) on actual loan of respective years have been applied for calculation of normative IDC of respective years

112. The normative IDC on additional capital expenditure has been worked out by applying WAROI on actual loan of the particular year on the average normative loan for the respective year, applied for half of the year of the time span. Accordingly, the normative IDC on additional capital expenditure is as follows:

(Rs. in lakh)

2014-15	2015-16	2016-17	2017-18	2018-19
760.89	221.46	9.60	24.59	55.34

Discharge of liabilities

113. The Petitioner has claimed discharge of liabilities for the 2014-19 tariff period in Form 18, as under:

(Rs. in lakh)

2014-15	2015-16	2016-17	2017-18	2018-19
4589.39	319.17	(-) 107.27	179.21	0.00

114. In compliance to the directions of the Commission vide ROP of the hearing dated 2.6.2020, the Petitioner vide affidavit dated 20.6.2020, has furnished the statement of reconciliation, with regard to un-discharged liabilities for each year and the balance sheet of the respective years duly certified by Auditor.

115. The Petitioner, in Form 1(I) has mentioned the additional capitalization on accrual basis, instead of cash basis. In Form 18 (Liability flow statement) also, the Petitioner has indicated the discharge of liabilities, as net of additions. However, since the additional capitalization is allowed on cash basis, the liabilities included in the additional capital expenditure as per Form 9A, has been deducted from the amounts, on accrual basis. Similarly, the discharge of liabilities (without additions in liabilities) have been worked out on the basis of the information furnished in Form 9A and Form 18 and allowed as under:

(Rs. in lakh)

	2014-15	**2015-16**	**2016-17**	**2017-18**	**2018-19**
Opening un-discharged liabilities as per Form 1(I) and Form 18	4980.50	391.10	71.03	162.07	0.00
Add: Additions as per Form-9A	391.10	71.03	163.06	0.00	0.00
Less: Closing un-discharged liabilities as per Form 1(I) and Form 18	391.10	71.03	162.07	0.00	0.00
Discharge of liabilities allowed	**4980.50**	**391.10**	**72.03**	**162.07**	**0.00**

Capital cost for the 2014-19 tariff period

116. Based on the above, the capital cost allowed for the 2014-19 tariff period is summarized as under.

(Rs. in lakh)

	2014-15	**2015-16**	**2016-17**	**2017-18**	**2018-19**
Opening capital cost	432039.88	463204.76	474874.98	475012.53	475749.68
Add: Net additional capitalisation allowed on cash basis	25567.49	11407.19	55.91	550.49	3164.22
Add: Discharges allowed	4980.50	391.10	72.03	162.07	0.00
Normative IDC allowed	760.89	221.46	9.60	24.59	55.34
Less: IDC Capitalised in Books excluding Railways	144.00	349.53	0.00	0.00	0.00
Closing capital cost	**463204.76**	**474874.98**	**475012.53**	**475749.68**	**478969.24**

Debt-Equity Ratio

117. Regulation 19 of the 2014 Tariff Regulations provides as under:

"(1) For a project declared under commercial operation on or after 1.4.2014 the debt equity ratio would be considered as 70:30 as on COD. If the equity actually deployed

is more than 30% of the capital cost equity in excess of 30% shall be treated as normative loan:
Provided that:
(i) where equity actually deployed is less than 30% of the capital cost actual equity shall be considered for determination of tariff:

(ii) the equity invested in foreign currency shall be designated in Indian rupees on the date of each investment:

(iii) any grant obtained for the execution of the project shall not be considered as a part of capital structure for the purpose of debt-equity ratio.

Explanation - *The premium if any raised by the generating company or the transmission licensee as the case may be while issuing share capital and investment of internal resources created out of its free reserve for the funding of the project shall be reckoned as paid up capital for the purpose of computing return on equity only if such premium amount and internal resources are actually utilised for meeting the capital expenditure of the generating station or the transmission system.*

(2) The generating Company or the transmission licensee shall submit the resolution of the Board of the company or approval from Cabinet Committee on Economic Affairs (CCEA) regarding infusion of fund from internal resources in support of the utilization made or proposed to be made to meet the capital expenditure of the generating station or the transmission system including communication system as the case may be.

(3) In case of the generating station and the transmission system including communication system declared under commercial operation prior to 1.4.2014 debt equity ratio allowed by the Commission for determination of tariff for the period ending 31.3.2014 shall be considered.

(4) In case of generating station and the transmission system including communication system declared under commercial operation prior to 1.4.2014 but where debt: equity ratio has not been determined by the Commission for determination of tariff for the period ending 31.3.2014 the Commission shall approve the debt: equity ratio based on actual information provided by the generating company or the transmission licensee as the case may be.

(5) Any expenditure incurred or projected to be incurred on or after 1.4.2014 as may be admitted by the Commission as additional capital expenditure for determination of tariff and renovation and modernization expenditure for life extension shall be serviced in the manner specified in clause (1) of this regulation."

118. Accordingly, the debt-equity ratio of 70:30 has been considered for the purpose of tariff, in terms of Regulation 19 of the 2014 Tariff Regulations.

Additional Tax on Income due to adoption of Indian Accounting Standards (Ind AS)

119. The Petitioner has also claimed additional tax arisen on account of amendments in the Finance Act, 2017 to be recovered separately over and above the annual fixed charges as per the 'Change in law' provisions. In this regard, the Petitioner has stated the following:

"…… in addition to existing provisions for computation of book profit, for Ind AS compliant companies on which MAT is applicable, including the Petitioner, the book profit was required to be further increased or decreased in following manner:

(i) By an amount credited or debited to other comprehensive income ("OCI") in the statement of profit and loss under the head "items that will not be re-classified to profit or loss; and

(ii) By one-fifth of the transition amount for year of convergence i.e. FY 2016-17 and the subsequent four years i.e. FY 2017-21. Transition amount has been defined as the amount or the aggregate of the amounts adjusted in the other equity (excluding capital reserve and securities premium reserve) on the convergence date.

The above enactments/ amendments in the Income Tax Act squarely fall under the ambit of Change in Law as per Regulation 3 (9)(a) and (b) and are required to be factored in the True-up of Annual Fixed Charges for the tariff period FY 2014-19 as per Regulation 8(5)(ii) of CERC Tariff Regulations 2014 being a totally uncontrollable factor and beyond the control of the Petitioner. Similar provisions also exist in CERC Tariff Regulations 2019 and, hence, same relief is available to the Petitioner during the tariff period 2019-24. In case of the Petitioner, MAT has been applicable during FY 2014-19 and is also expected to be applicable during FY 2019-24 and the book profit and tax liability thereon has increased due to the said Change in Law. Thus, the Petitioner is entitled to recovery of Additional Tax payable due to this Change in Law for the applicable FYs 2016-17, 2017-18, 2018-19 in the tariff period FY 2014-19 and for FYs 2019-20 and 2020-21 in the tariff period FY 2019-24. Accordingly, it is humbly submitted to the Hon'ble Commission to kindly consider the following enactments/amendments as Change in Law under the CERC Tariff Regulations 2014:

a. the notification of Companies (Indian Accounting Standards) Rules, 2015 and
b. amendment of Section 115JB of the Income tax Act, 1961 under Finance Act, 2017 in order to incorporate provisions w.r.t Ind AS compliant companies

Further, as the basic principle of Change in Law is the principle of restitution i.e. to bring back the Petitioner to same economic position as it would have been had Change in Law not taken place, the Petitioner proposes to recover this additional tax separately over and above the Annual Fixed Charges as per the provisions of the regulations other than Change in Law provisions and not as part of Annual Fixed Charges. This will also avoid unwarranted increase in Interest on Working Capital that are linked to Annual Fixed Charges. However, since this additional tax recovery adds to book profit and attracts further tax on it, the net recovery would not fully compensate the Petitioner for increased tax. Therefore, in order to place the Petitioner back to the same economic position, this additional tax recovery needs to be grossed up by the applicable MAT rate for the relevant year and allowed to be recovered separately from the beneficiaries."

120. We have examined the matter. As regards the recovery of additional tax liability due to implementation of Ind-AS, it is observed that the 2014 Tariff Regulations provide for tax recovery by way of grossing up of Return on Equity with the effective tax rate or Minimum Alternate Tax (MAT) in case of a generating company or a transmission licensee, as the case may be, paying MAT of the respective financial year. Further, no income, other than generation/ transmission

activities is considered for the purpose of tax recovery. In the present case, ROE is being allowed for grossing up with the MAT rate, as envisaged under the provisions of the 2014 Tariff Regulations. It is further observed that the implementation of Ind-AS has an accounting treatment implication and does not result in income from generation business activity. Accordingly, the prayer of the Petitioner to allow the recovery of additional tax liability on the increased income, due to implementation of Ind-AS is not permitted.

Return on Equity

121. Regulations 24 and 25 of the 2014 Tariff Regulations provide as under:

"24. Return on Equity:

(1) Return on equity shall be computed in rupee terms on the equity base determined in accordance with regulation 19.

(2) Return on equity shall be computed at the base rate of 15.50% for thermal generating stations transmission system including communication system and run of river hydro generating station and at the base rate of 16.50% for the storage type hydro generating stations including pumped storage hydro generating stations and run of river generating station with pondage: Provided that:

(i) in case of projects commissioned on or after 1st April 2014 an additional return of 0.50% shall be allowed if such projects are completed within the timeline specified in Appendix-I:
(ii) the additional return of 0.5% shall not be admissible if the project is not completed within the timeline specified above for reasons whatsoever:
(iii) additional ROE of 0.50% may be allowed if any element of the transmission project is completed within the specified timeline and it is certified by the Regional Power Committee / National Power Committee that commissioning of the particular element will benefit the system operation in the regional/national grid:
(iv) the rate of return of a new project shall be reduced by 1% for such period as may be decided by the Commission if the generating station or transmission system is found to be declared under commercial operation without commissioning any of the Restricted Governor Mode Operation (RGMO) / Free Governor Mode Operation (FGMO) data telemetry communication system up to load dispatch centre or protection system:
(v) as and when any of the above requirement are found lacking in a generating station based on the report submitted by the respective RLDC ROE shall be reduced by 1% for the period for which the deficiency continues: (vi) additional ROE shall not be admissible for transmission line having length of less than 50 kilometres."

25. Tax on Return on Equity:

(1) The base rate of return on equity as allowed by the Commission under Regulation 24 shall be grossed up with the effective tax rate of the respective financial year. For this purpose the effective tax rate shall be considered on the basis of actual tax paid in the respect of the financial year in line with the provisions of the relevant Finance Acts by the concerned generating company or the transmission licensee as the case

may be. The actual tax income on other income stream (i.e. income of non-generation or non-transmission business as the case may be) shall not be considered for the calculation of "effective tax rate".

(2) Rate of return on equity shall be rounded off to three decimal places and shall be computed as per the formula given below:

Rate of pre-tax return on equity = Base rate / (1-t) Where "t" is the effective tax rate in accordance with Clause (1) of this regulation and shall be calculated at the beginning of every financial year based on the estimated profit and tax to be paid estimated in line with the provisions of the relevant Finance Act applicable for that financial year to the company on pro-rata basis by excluding the income of non-generation or non-transmission business as the case may be and the corresponding tax thereon. In case of generating company or transmission licensee paying Minimum Alternate Tax (MAT) "t" shall be considered as MAT rate including surcharge and cess.

Illustration.

(i) In case of the generating company or the transmission licensee paying Minimum Alternate Tax (MAT) @ 20.96% including surcharge and cess: Rate of return on equity = 15.50/(1-0.2096) = 19.610%

(ii) In case of generating company or the transmission licensee paying normal corporate tax including surcharge and cess:

(a)Estimated Gross Income from generation or transmission business for FY 2014-15 is Rs 1000 crore.
(b)Estimated Advance Tax for the year on above is Rs 240 crore.
(c) Effective Tax Rate for the year 2014-15 = Rs 240 Crore/Rs 1000 Crore = 24%
(d)Rate of return on equity = 15.50/ (1-0.24) = 20.395%

(3) The generating company or the transmission licensee as the case may be shall true up the grossed up rate of return on equity at the end of every financial year based on actual tax paid together with any additional tax demand including interest thereon duly adjusted for any refund of tax including interest received from the income tax authorities pertaining to the tariff period 2014-15 to 2018-19 on actual gross income of any financial year. However, penalty if any arising on account of delay in deposit or short deposit of tax amount shall not be claimed by the generating company or the transmission licensee as the case may be. Any under-recovery or over recovery of grossed up rate on return on equity after truing up shall be recovered or refunded to beneficiaries or the long-term transmission customers/DICs as the case may be on year to year basis."

122. The Commission in its order dated 1.10.2019 in Petition No.152/GT/2015 had allowed the normative equity of Rs.129747.21 lakh as on 31.3.2014. However, as only the capital cost of Rs.432039.88 lakh as on 1.4.2014 has been allowed as against the capital cost of Rs.432490.69 lakh allowed vide Commission's order dated 1.10.2019 in Petition No.152/GT/2015, the opening equity has also been adjusted to Rs.129611.96 lakh for the 2014-19 tariff period. The Petitioner has claimed MAT

rates for the respective financial years for grossing up of ROE and the same has been considered for the purpose of tariff. Accordingly, ROE has been worked out and allowed as under:

(Rs. in lakh)

	2014-15	**2015-16**	**2016-17**	**2017-18**	**2018-19**
Gross Notional Equity	129611.96	138961.43	142462.50	142503.76	142724.90
Addition due to Additional Capitalization	9349.47	3501.07	41.26	221.15	965.87
Closing Equity	138961.43	142462.50	142503.76	142724.90	143690.77
Average Equity	134286.70	140711.96	142483.13	142614.33	143207.84
Return on Equity (Base Rate)	15.500%	15.500%	15.500%	15.500%	15.500%
Tax rate for the year	20.9605%	21.3416%	21.3416%	21.3416%	21.5488%
Rate of Return on Equity (Pre Tax)	19.610%	19.705%	19.705%	19.705%	19.758%
Return on Equity	**26333.62**	**27727.29**	**28076.30**	**28102.15**	**28295.00**

Interest on loan

123. Regulation 26 of the 2014 Tariff Regulations provides as under:

> ***"****26. Interest on loan capital:*
>
> *(1) The loans arrived at in the manner indicated in regulation 19 shall be considered as gross normative loan for calculation of interest on loan.*
>
> *(2) The normative loan outstanding as on 1.4.2014 shall be worked out by deducting the cumulative repayment as admitted by the Commission up to 31.3.2014 from the gross normative loan.*
>
> *(3) The repayment for each of the year of the tariff period 2014-19 shall be deemed to be equal to the depreciation allowed for the corresponding year/period. In case of de-capitalization of assets the repayment shall be adjusted by taking into account cumulative repayment on a pro rata basis and the adjustment should not exceed cumulative depreciation recovered upto the date of de-capitalization of such asset.*
>
> *(4) Notwithstanding any moratorium period availed by the generating company or the transmission licensee as the case may be the repayment of loan shall be considered from the first year of commercial operation of the project and shall be equal to the depreciation allowed for the year or part of the year.*
>
> *(5) The rate of interest shall be the weighted average rate of interest calculated on the basis of the actual loan portfolio after providing appropriate accounting adjustment for interest capitalized:*
>
> *Provided that if there is no actual loan for a particular year but normative loan is still outstanding the last available weighted average rate of interest shall be considered:*
>
> *Provided further that if the generating station or the transmission system as the case may be does not have actual loan then the weighted average rate of interest of the generating company or the transmission licensee as a whole shall be considered.*
>
> *(6) The interest on loan shall be calculated on the normative average loan of the year by applying the weighted average rate of interest.*
>
> *(7) The generating company or the transmission licensee as the case may be shall make every effort to re-finance the loan as long as it results in net savings on interest*

and in that event the costs associated with such re-financing shall be borne by the beneficiaries and the net savings shall be shared between the beneficiaries and the generating company or the transmission licensee as the case may be in the ratio of 2:1.

(8) The changes to the terms and conditions of the loans shall be reflected from the date of such re-financing.

(9) In case of dispute any of the parties may make an application in accordance with the Central Electricity Regulatory Commission (Conduct of Business) Regulations 1999 as amended from time to time including statutory re-enactment thereof for settlement of the dispute:

Provided that the beneficiaries or the long term transmission customers /DICs shall not withhold any payment on account of the interest claimed by the generating company or the transmission licensee during the pendency of any dispute arising out of re-financing of loan.

124. The Petitioner has re-financed the long-term loan to reduce the interest burden on the beneficiaries. For the purpose of calculation of interest on normative loan, the Petitioner has considered interest rate of original loan, and not the new rate after refinancing. The Petitioner has submitted that in case of refinancing, the application of Regulation 26(5) of the 2014 Tariff Regulations would require the computation of 'weighted average rate of interest' using the actual loan portfolio/ schedule, along with interest rate that would have been applicable for original loan term. In our view, Regulation 26(5) of the 2014 Tariff Regulations provides that the weighted average rate should be calculated on the basis of actual loan portfolio, which implies the consideration of the 'existing loan' portfolio. As such, the applicable rate is the rate after such refinancing of loan. This was decided by the Commission while working out the interest on normative loan in order dated 26.12.2017 in Petition No.152/GT/2015 and subsequently in Commission's order dated 25.4.2019 in Petition No.16/RP/2018 filed by the Petitioner. Accordingly, the weighted average rate of interest (based on the rates as applicable before re-financing) as claimed by the Petitioner, is not allowed. The Petitioner, in compliance with the directions of the Commission vide ROP dated 2.6.2020, has, vide affidavit dated 20.6.2020, submitted revised Form-13, furnishing calculation of weighted average rate of

interest on actual loans at refinanced rates and the same has been considered for computation of interest on normative loan. Accordingly, Interest on loan has been worked out as mentioned below:

i) Since the capital cost of Rs.432039.88 lakh as on 1.4.2014 is allowed as against the capital cost of Rs.432490.69 lakh allowed vide Commission's order dated 1.10.2019 in Petition No. 152/GT/2015, the adjusted gross normative loan amounting to Rs.302427.92 lakh has been considered as on 1.4.2014.

ii) The adjusted cumulative repayment of Rs.47164.35 lakh as on 31.3.2014 as has been considered as on 1.4.2014.

iii) Accordingly, the net normative opening loan as on 1.4.2014 works out to Rs. 255263.57 lakh;

iv) Addition to the normative loan on account of additional capital expenditure approved above has also been considered;

v) The depreciation allowed has been considered as repayment of normative loan during the respective year of the 2014-19 period. Further, the repayments have been adjusted for de-capitalization of assets considered for the purpose of tariff;

125. Necessary calculations for interest on loan are as under:

(Rs. in lakh)

	2014-15	**2015-16**	**2016-17**	**2017-18**	**2018-19**
Gross Notional loan	302427.92	324243.34	332412.49	332508.77	333024.77
Cumulative Repayment of Loan up to previous year	47164.35	69464.84	93120.51	117005.07	140722.28
Net Opening loan	255263.57	254778.50	239291.98	215503.70	192302.49
Addition due to additional capitalisation	21815.42	8169.15	96.28	516.01	2253.69
Repayment of loan during the period	**22785.93**	**23700.34**	**23949.17**	**23969.12**	**24160.20**
Less: Repayment adjustment on account of de-capitalization	485.44	44.67	64.61	251.90	148.66
Net Repayment	22300.49	23655.67	23884.56	23717.21	24011.55
Net Closing loan	254778.50	239291.98	215503.70	192302.49	170544.64
Average loan	255021.03	247035.24	227397.84	203903.10	181423.57
Weighted Average Rate of Interest on loan	10.96%	10.46%	9.92%	8.99%	8.79%
Interest on loan	**27957.86**	**25842.46**	**22561.92**	**18331.74**	**15953.23**

126. The Petitioner has refinanced the loan which has resulted in substantial benefits to the respondents on account of lower interest rates. The costs associated

with such re-financing shall be borne by the beneficiaries and the benefits of refinancing shall be calculated and shared between the beneficiaries and petitioner in the ratio of 2:1 in terms of Regulations 26(7), 26(8) and 26(9) of the 2014 Tariff Regulations.

Depreciation

127. Regulation 27 of the 2014 Tariff Regulations provides as under:

> *"27. Depreciation:*
>
> *(1) Depreciation shall be computed from the date of commercial operation of a generating station or unit thereof or a transmission system including communication system or element thereof. In case of the tariff of all the units of a generating station or all elements of a transmission system including communication system for which a single tariff needs to be determined the depreciation shall be computed from the effective date of commercial operation of the generating station or the transmission system taking into consideration the depreciation of individual units or elements thereof.*
>
> *Provided that effective date of commercial operation shall be worked out by considering the actual date of commercial operation and installed capacity of all the units of the generating station or capital cost of all elements of the transmission system for which single tariff needs to be determined.*
>
> *(2) The value base for the purpose of depreciation shall be the capital cost of the asset admitted by the Commission. In case of multiple units of a generating station or multiple elements of transmission system weighted average life for the generating station of the transmission system shall be applied. Depreciation shall be chargeable from the first year of commercial operation. In case of commercial operation of the asset for part of the year depreciation shall be charged on pro rata basis.*
> *(3) The salvage value of the asset shall be considered as 10% and depreciation shall be allowed up to maximum of 90% of the capital cost of the asset:*
>
> *Provided that in case of hydro generating station the salvage value shall be as provided in the agreement signed by the developers with the State Government for development of the Plant:*
>
> *Provided further that the capital cost of the assets of the hydro generating station for the purpose of computation of depreciated value shall correspond to the percentage of sale of electricity under long-term power purchase agreement at regulated tariff:*
>
> *Provided also that any depreciation disallowed on account of lower availability of the generating station or generating unit or transmission system as the case may be shall not be allowed to be recovered at a later stage during the useful life and the extended life.*
>
> *(4) Land other than the land held under lease and the land for reservoir in case of hydro generating station shall not be a depreciable asset and its cost shall be excluded from the capital cost while computing depreciable value of the asset.*

(5) Depreciation shall be calculated annually based on Straight Line Method and at rates specified in Appendix-II to these regulations for the assets of the generating station and transmission system:

Provided that the remaining depreciable value as on 31st March of the year closing after a period of 12 years from the effective date of commercial operation of the station shall be spread over the balance useful life of the assets.

(6) In case of the existing projects the balance depreciable value as on 1.4.2014 shall be worked out by deducting the cumulative depreciation as admitted by the Commission up to 31.3.2014 from the gross depreciable value of the assets.

(7) The generating company or the transmission license as the case may be shall submit the details of proposed capital expenditure during the fag end of the project (five years before the useful life) along with justification and proposed life extension. The Commission based on prudence check of such submissions shall approve the depreciation on capital expenditure during the fag end of the project.

(8) In case of de-capitalization of assets in respect of generating station or unit thereof or transmission system or element thereof the cumulative depreciation shall be adjusted by taking into account the depreciation recovered in tariff by the de-capitalized asset during its useful services."

128. As regards the weighted average rate of depreciation used for the computation of the depreciation claimed, the Petitioner has submitted that the same has been considered based on the actual depreciation provided in books of accounts. The Petitioner has further submitted that as per accounting policy of the Petitioner, depreciation on fixed assets is provided on *pro rata* basis from the month in which the asset is available for use, on straight line method, at the rate and methodology notified in the 2014 Tariff Regulations, except in case of following assets, based on estimated useful life of the asset:

Asset Class	**Rate as notified by Commission**	**Rate in Books (%)**
Land under lease	3.34%	4%
Computer and accessories	15%	16.21%
Motor vehicles	9.50%	19%
Software	15%	Over the useful life or five years, whichever is lower
Assets costing Rs.5000 or less individually and mobile hand sets	5.28%	Fully depreciated in the year of acquisition

129. The Petitioner has submitted that in pursuance of Ind-AS 17 (which is applicable to Petitioner from 2016-17 with comparative period of one year viz. 2015-16), the leasehold land, which was earlier considered as part of the gross block and

thereby depreciated/ amortized, would now be treated as part of 'current assets' and amortized over the license period. In this context, adjustment to this extent is made in the books of accounts. The Petitioner has submitted that though the 2014 Tariff Regulations provide for specific depreciation rate for lease-hold land, consequent upon adoption of Ind-AS by the Petitioner, the treatment of leasehold land has changed in the books of accounts. Therefore, the Petitioner, in the present petition, has claimed depreciation against leasehold land, based on the actual amortization charged in the books of accounts.

130. The matter has been examined. It is observed that the Petitioner has claimed depreciation based on the weighted average rate of depreciation, as per the books of accounts. In terms of Regulation 27(5) of the 2014 Tariff Regulations, the rates specified in Appendix-II to the said regulations, in respect of the assets of the generating station are required to be used for arriving at the weighted average rate of depreciation. Accordingly, the weighted average rate of depreciation as claimed by the Petitioner has not been considered and the rates specified in Appendix-II of the 2014 Tariff Regulations have been considered for the computation of depreciation. Thus, the weighted average rate of depreciation claimed by the Petitioner *vis-à-vis* allowed in terms of said regulations is tabulated below:

	2014-15	**2015-16**	**2016-17**	**2017-18**	**2018-19**
Weighted Average Rate of Depreciation claimed	5.11%	5.13%	5.11%	5.08%	5.11%
Weighted Average Rate of Depreciation allowed	5.09%	5.05%	5.04%	5.04%	5.06%

131. Accordingly, depreciation allowed for the 2014-19 tariff period is as under:

(Rs. in lakh)

	2014-15	**2015-16**	**2016-17**	**2017-18**	**2018-19**
Opening Gross Block (A)	432039.88	463204.76	474874.98	475012.53	475749.68
Addition due to Additional Capitalisation (B)	31164.88	11670.22	137.54	737.15	3219.56

Closing Gross Block (C)	463204.76	474874.98	475012.53	475749.68	478969.24
Average Gross Block D=(A+C)/2	447622.32	469039.87	474943.76	475381.10	477359.46
Value of Freehold Land included in gross block (E)	8635.47	17305.94	17340.93	17341.13	17427.23
Depreciation value F= (D-E) x 90%	395088.16	406560.54	411842.55	412235.98	413939.00
Remaining depreciable value (G=F-Cumulative Depreciation (as shown under 'M') at the end of previous year)	347923.82	337095.70	318722.04	295230.91	273216.72
No. of completed years at the beginning of the year (H)	2.58	3.58	4.58	5.58	6.58
Balance Useful life at the beginning of the Year (I)	22.42	21.42	20.42	19.42	18.42
Rate of Depreciation (J) as per Annexure-I to this order	5.09%	5.05%	5.04%	5.04%	5.06%
Depreciation (K)	**22785.93**	**23700.34**	**23949.17**	**23969.12**	**24160.20**
Cumulative depreciation (at the end of the period) (L= K + Cumulative depreciation at the end of previous year*)	69950.28	93165.18	117069.68	140974.19	164882.48
Less: Depreciation adjustment on account of de-capitalization (M)	485.44	44.67	64.61	251.90	148.66
Cumulative depreciation after adjustment due to de-capitalization (at the end of the period) (N=L-M)*	69464.84	93120.51	117005.07	140722.28	164733.83

** Note: The Cumulative Depreciation at the end of 2013-14 is Rs. 47164.35 lakh.*

Unrecovered Depreciation on De-capitalisation

132. The Petitioner has submitted that in the events where de-capitalization of assets have to be carried out in the initial years of useful life of assets, there would be significant loan outstanding on account of such assets which will necessarily have to be serviced till end of loan tenure. It has stated that post de-capitalization, since neither depreciation nor interest is available on such assets, the actual loan outstanding for such assets will have to be serviced from revenue allowed for

meeting other expenses. This, according to the Petitioner, leads to financial hardship and under-recovery, as it falls short of the revenue required for meeting expenses which are already approved by the Commission. The Petitioner has also submitted that the circumstances which lead to such shortfall are entirely beyond the control of the Petitioner and for force majeure conditions. The Petitioner has further submitted that as per Ind AS 16, along with de-recognition/ de-capitalization of replaced assets, the Petitioner is required to book the gain or loss arising out of de-recognition in its accounts. The Petitioner has added that while the 2014 Tariff Regulations and the 2019 Tariff Regulations provide for de-capitalization of replaced assets, there is no corresponding regulation for considering the gain or loss due to such replacement for not recovering the normative depreciation @90%. In view of the above, the Petitioner has requested that the Commission may allow the recovery of unrecovered depreciation i.e. allowed depreciation (90% of the Asset value-Depreciation recovered till date of de-capitalization) to compensate for the losses which it may incur in books of accounts, in exercise of the 'Power to Relax' and 'Power to Remove Difficulty' under the 2014 Tariff Regulations. The Petitioner has also proposed to separately recover the losses towards unrecovered depreciation as additional depreciation, over and above the specified norms under the 2014 Tariff Regulations. The claim of the Petitioner for unrecovered depreciation during the 2014-19 tariff period is as under:

(Rs. in lakh)

2015	2016	2017	2018	2019	Total
160.00	137.00	158.00	482.00	213.00	**1150.00**

133. We have examined the matter. It is observed that the 2014 Tariff Regulations provides for servicing of the funds infused in the admitted capitalised expenditure, by way of allowing ROE and Interest on loan capital as components of the annual fixed charges for the assets put in use. The equity and loan component for this purpose

are determined in accordance with Regulation 19 of the 2014 Tariff Regulations. Thus, the said regulation provides for servicing the debt capital in the form of 'Interest on loan' on the amount of loan arrived at, by applying the debt-equity ratio on the capital cost allowed and not on the 'actual loan' being serviced through tariff. The capital cost has been allowed after necessary adjustment for the decapitalisation of the asset. Apart from deduction in the cumulative depreciation, corresponding cumulative repayment of loan is also brought down. Hence, in case of repayment of loan, instead of the 'actual loan repayment', the depreciation allowed for the corresponding year/ period is considered as repayment of loan and the same is in line with Regulation 26(3) of the 2014 Tariff Regulations, which is extracted below:

> *"26(3) The repayment for each of the year of the tariff period 2014-19 shall be deemed to be equal to the depreciation allowed for the corresponding year/ period."*

134. Accordingly, the prayer of the Petitioner to allow the recovery of unrecovered depreciation (*in respect of assets not in use*) is not allowed as the same is not in conformity with the provisions of the 2014 Tariff Regulations.

O & M Expenses

135. The total O&M expenses claimed by the Petitioner for the 2014-19 tariff period is as under:

(Rs. in lakh)

Items / Heads	2014-15	2015-16	2016-17	2017-18	2018-19
Normative O&M expenses as per Regulation 29(1)(a) of the 2014 Tariff Regulations	16800.00	17860.50	18984.00	20181.00	21451.50
Water charges as per Regulation 29(2) of the 2014 Tariff Regulations	946.18	996.05	993.31	965.52	930.54
Capital spares as per Regulation 29(2)	0.00	0.00	58.34	53.52	10.45
Rental &Conveyance expenses in lieu of 2nd township	100.35	76.08	57.61	74.98	51.19
Total O&M Expenses	**17846.53**	**18932.63**	**20093.26**	**21275.02**	**22443.68**

136. The normative O&M expenses claimed by the Petitioner under Regulation 29(1)(a) of the 2014 Tariff Regulations are the same as allowed vide order dated 26.12.2017 in Petition No.152/GT/2015. Accordingly, the normative O&M expenses claimed by the Petitioner in terms of Regulation 29(1)(a) of the 2014 Tariff Regulations is allowed.

Water Charges

137. Regulation 29(2) of the 2014 Tariff Regulations provides as under:

> *"29(2) Operation and Maintenance Expenses*
>
> *(2) The Water Charges and capital spares for thermal generating stations shall be allowed separately:*
>
> *Provided that water charges shall be allowed based on water consumption depending upon type of plant, type of cooling water system etc., subject to prudence check. The details regarding the same shall be furnished along with the petition:*
>
> *Provided that the generating station shall submit the details of year wise actual capital spares consumed at the time of truing up with appropriate justification for incurring the same and substantiating that the same is not funded through compensatory allowance or special allowance or claimed as a part of additional capitalisation or consumption of stores and spares and renovation and modernization."*

138. The Commission, in order dated 26.12.2017 in Petition No. 152/GT/2015, had allowed Water charges under Regulation 29(2) of the 2014 Tariff Regulations, based on the audited actual water charges incurred for 2014-15 as under:

(Rs. in lakh)

2014-15	2015-16	2016-17	2017-18	2018-19
946.18	946.18	946.18	946.18	946.18

139. The Petitioner, in this petition, has claimed water charges based on the audited actual water charges for the 2014-19 tariff period, in terms of Regulation 29(1)(b) of the 2014 Tariff Regulations. The Petitioner has furnished the details of actual water consumption, water charge rates and water cess for each year. The water charges claimed are as under:

(Rs. in lakh)

2014-15	2015-16	2016-17	2017-18	2018-19
946.18	996.05	993.31	965.52	930.54

140. As stated, the Water charges allowed vide order dated 26.12.2017 in Petition No.152/GT/2015 were based on the water charges incurred for 2014-15 and the same was subject to revision, at the time of truing up of tariff, based on the actual water charges paid by the Petitioner for the 2014-19 tariff period. The Petitioner has claimed water charges, duly audited, based on actual water consumption. Accordingly, on prudence check, the water charges claimed is allowed.

Capital Spares

141. As regards the claim of the Petitioner for 'capital spares' in terms of Regulation 29(2) of the 2014 Tariff Regulations, the Commission, in order dated 26.12.2017 in Petition No.152/GT/2015 had observed that the claim of the Petitioner, if any, would be considered on merits, on prudence check, at the time of truing-up of tariff. The Petitioner, in the present petition, has claimed the following capital spares, based on audited actual capital spares consumed during the 2014-19 tariff period:

(Rs. in lakh)

	2014-15	2015-16	2016-17	2017-18	2018-19
Spare Circuit Breaker for MV & LV Switchgear (BTG & main)	0.00	0.00	18.96	0.00	7.18
Spare Motors for (BTG, RWP & AHP)	0.00	0.00	39.38	16.36	0.90
TDBFP Recirculation valve	0.00	0.00	0.00	27.61	2.37
Boiler Tubes	0.00	0.00	0.00	9.55	0.00
Total	0.00	0.00	**58.34**	**53.52**	**10.45**

142. In support of the said claim, the Petitioner has submitted the following:

(a) ***Spare Circuit Breaker for MV & LV Switch gear (BTG & main)***

Spare Circuit Breaker for MV & LV switch gear was needed to be procured for running the plant without any generation loss or to minimize the duration of generation loss in case of any breakdown. Since these circuit breakers have a lead time of delivery, the same is needed to be procured and maintained as capital spares. While procurement of these spares, it was found that GE has stopped manufacturing these circuit breakers, hence, different make compatible circuit breaker was procured as spare. The capital expenditure for Spare Circuit Breaker for

MV & LV Switch gear (BTG & main) may be approved by the Commission, as capital spare in terms of the2014 Tariff Regulations.

(b) ***Spare Motors (comprising of 500 KW Motor for Raw Water Pump, 500 KW Motor for Conveying Air Compressor for Ash Handling Plant, 350 KW Motor for Auxiliary Cooling Water pump):***

As per existing configuration, 3 number of raw water pump motors, 6 number of conveying air compressor motors for ash evacuation and 4 No of auxiliary cooling water pump motors are in service. These are critical 6.6 KV motors and were not having initial spares. Hence, new spare motors were procured and are used on rotation basis to overhaul present motors in case of any breakdown. For overhauling, these motors are required to be sent to vendor facilities as overhauling within the Plant was not so effective. In view of foregoing, procurement of above motors was carried out. The capital expenditure for these Spare Motors, therefore, may kindly be approved by the Commission as Capital Spare in terms of the 2014 Tariff Regulations.

(c) ***TDBFP Re-circulation valve***

Recirculation Valve (RCV) is an integral part of the Boiler Feed Pump. This is an ON/OFF type Valve and it operates depending on the suction flow of the Boiler Feed Pump. Opening of RCV is very much critical during initial start-up for maintaining minimum flow requirement of BFP and during emergencies to avoid churning and damage of pump internals. After few years, it was observed that the RCVs are passing feed water during shut-off condition (i.e. during normal operation). The rate of passing gradually increased and reached up to 300 TPH in a Unit. Initially, the passing could be controlled by repairing the Valve internals which could sustain only 4-6 months. Repeated damage of Valve Seat, Plug & Stack caused frequent outage of BFP. Meanwhile, matter was also taken up with M/s Dresser India (OEM) for analysis and recommendation. According to manufacturer's analysis, the damage is due to high throttling pressure at the tip of the Valve Seat & Plug for which the existing Diaphragm-type Actuator is not able to shut-off 100% during normal operation of the Units and is thereby causing passing of feed water. M/s Dresser, therefore, suggested for changing the single acting Diaphragm-type Actuator to double acting Piston Actuator. Recommendation of M/s Dresser is annexed. Pursuant to above in FY 18, two RCVs were procured as Capital Spare which were subsequently consumed in Unit 1. Depending on the performance, balance valves including their spares are phased to be procured in FY 20. In view of above constraint, it is humbly prayed Commission to approve the Spare TDBFP Recirculation Valve in terms of the 2014 Tariff Regulations.

(d) ***Boiler Tubes***

It is humbly submitted that some specific portion of pressure parts like bends and joints are exposed to high ash content coal, which had damaged such pressure parts. Such damaged parts require replacement for safety and reliability of the Plant. Accordingly, some spare boilers tubes/pressure parts were procured in 2018 to refurbish the damaged pressure parts of boiler like economiser, super-heater, re-heater etc. It is, therefore, prayed to approve the Spare Boiler Tubes/pressure parts under Regulation 29(2) of the 2014 Tariff Regulations."

143. In terms of Regulation 29(2) of the 2014 Tariff Regulations, the actual expenses incurred by the Petitioner towards capital spares consumed are admissible as additional O&M expenses. The Petitioner has certified that the capital spares

claimed have not been funded through Compensatory Allowance or Special Allowance in terms of the 2014 Tariff Regulations or has been claimed as part of additional capital expenditure or by consumption of stores and spares for R&M. Moreover, the cost of the capital spares claimed by the Petitioner has been excluded from the 'gross capital cost' under the head 'exclusion' in the additional capitalization of spares. It is pertinent to mention that the term 'capital spares' has not been defined in the 2014 Tariff Regulations. The term capital spares, in our view, is a piece of equipment, or a spare part, of significant cost that is maintained in inventory for use in the event that a similar piece of critical equipment fails or must be rebuilt. Keeping in view the principle of materiality and to ensure standardised practices in respect of earmarking and treatment of capital spares, the value of capital spares exceeding Rs.1 (one) lakh, on prudence check of the details furnished by the Petitioner in Form-17 of the petition, has been considered for the purpose of tariff. Further, we are of the view that spares do have a salvage value. Accordingly, in line with the practice of considering the salvage value, presumed to be recovered by the Petitioner on sale of other capital assets, on becoming unserviceable, the salvage value of 10% has been deducted from the cost of capital spares considered above, for the 2014-19 tariff period. Therefore, on prudence check of the information furnished by the Petitioner in Form-17 and on applying the said ceiling limit along with deduction of the salvage value @10%, the net capital spares allowed in terms of Regulation 29(2) of 2014 Tariff Regulations is as follows:

(Rs. in lakh)

	2014-15	**2015-16**	**2016-17**	**2017-18**	**2018-19**
Spare Circuit Breaker for MV & LV Switchgear (BTG & main)	0.00	0.00	18.96	0.00	7.18
Spare Motors for (BTG, RWP & AHP)	0.00	0.00	39.38	16.36	0.00
TDBFP Recirculation valve	0.00	0.00	0.00	27.61	2.37
Boiler Tubes*	0.00	0.00	0.00	0.00	0.00
Total before salvage value	0.00	0.00	58.34	43.97	9.55
Less: Salvage value @10%	0.00	0.00	5.83	4.40	0.96
Total capital spares allowed	0.00	0.00	**52.51**	**39.57**	**8.59**

Expenditure against Boiler tubes has not been considered as the details of boiler tubes including numbers consumed has not been provided. Further, such expenditure is deemed to be covered under normative O&M expenses

144. Accordingly, the total O&M expenses allowed in terms of the 2014 Tariff Regulations are as under:

(Rs in lakh)

	2014-15	**2015-16**	**2016-17**	**2017-18**	**2018-19**
Normative O&M Expenses as per Regulation 29(1)(a) of the 2014 Tariff Regulations	16800.00	17860.50	18984.00	20181.00	21451.50
Water Charges as per Regulation 29(2) of the 2014 Tariff Regulations	946.18	996.05	993.31	965.52	930.54
Capital Spares as per Regulation 29(2) of the 2014 Tariff Regulations	0.00	0.00	52.51	39.57	8.59
Total O&M expenses allowed as per Regulation 29 of the 2014 Tariff Regulations	**17746.18**	**18856.55**	**20029.82**	**21186.09**	**22390.63**

Additional O&M expenses

A. In lieu of 2nd Township

145. The Petitioner has claimed the following additional O&M expenses in lieu of 2nd Township:

(Rs. in lakh)

	2014-15	**2015-16**	**2016-17**	**2017-18**	**2018-19**
Rental Charges (a)	123.40	90.88	54.27	74.15	67.52
HRA deduction from employee (b)	78.19	67.34	62.58	65.80	75.11
Conveyance Charges (c)	55.15	52.55	65.92	66.63	58.79
Total - (a-b+c)	**100.35**	**76.08**	**57.61**	**74.98**	**51.19**

146. In support of the aforesaid claims, the Petitioner has submitted the following:

(a) MPL had planned to construct the second phase of the Township to accommodate the balance employees after phase I. Due to unavailability of land in the adjoining area of the existing township, the Petitioner made efforts to locate suitable Land in nearby location to facilitate the above purpose. Through letter dated 25.11.2011, it had approached DVC for additional allocation of 30000 m^2 of land in the plot adjacent to the phase-I of the Township. However, further transfer of land from DVC was restricted by the Circular No. 93/2011-CDN dated 6.4.2011 of the Ministry of Urban Development, GOI, wherein Government undertakings like DVC have been directed to seek prior approval of the Cabinet for any transfer/alienation of Land belonging to the Government. The Petitioner approached the district administration to acquire land of approximately 30 acres. However, the land identified by the district administration for the construction of Phase II of the township is owned by the tribal community and GOJ. Accordingly, it again persuaded the district

administration for obtaining the necessary clearance for acquisition of land from the tribal community and GOJ. For past 8 years the Petitioner is struggling to find suitable land for phase-II of township in and around generating station. Therefore, in view of the non-availability of contiguous litigation free land and recommendation of the Petitioner's Management, the Board of Directors of it, in its 92nd Meeting of held on, 16.3.2019 has approved dropping of the additional capital expenditure in respect of 'Colony and Township" of ₹60.00 crore;

(b) Presently, the employees of the Petitioner are accommodated in Dhanbad and Asansol (approximately 40-50 km from the generating station) in rented accommodation and bus service is provided to employee for conveyance for both normal and shift duties. This has resulted into additional O&M cost which is not part of Normative O&M Expenses. Total cost incurred by the Petitioner in absence of phase II of "Township & Colony" is presented in table below;

(c) Had the Petitioner been able to come-up with the Phase-II of the Township and Colony at the projected capital expenditure of ₹60 crores by 31.3.2014, the total Annual Fixed Charges (AFC) recovery towards Phase-II of the Township in the remaining years of the useful life of the Station would have been ₹223 crore whereas if it pursues the current arrangement for employees as stated above it would require additional O&M expenses towards rent and conveyance of about ₹23.15 crore over the same period resulting into a net savings of ₹199.38 crore for the beneficiaries which shall ultimately rests with them. Therefore, the Petitioner is seeking these Rental and Conveyance Expenses over and above Normative O&M Expenses. Going with existing arrangement and seeking additional O&M expenses in lieu of Phase-II of the township and utilizing savings for other cost overrun is in no way causing harm to the beneficiaries and shall be a fair approach to compensate the costs incurred/to be incurred by the Petitioner. For arriving at savings, AFC has been computed as per 2014 Tariff Regulations and assuming that the additional capital expenditure was capitalized on 31.3.2014. Rent, HRA deduction and conveyance charges have been considered at actual for 2014-15 to 2018-19 and thereafter projected based on average of the previous five years with an annual escalation of 5% thereon until useful life of the generating station. Detailed workings of AFC and additional O&M expenses and net savings on account of this annexed for kind perusal of the Commission;

(d) In view of foregoing, Commission is, therefore, most humbly requested to allow the expenses incurred by the Petitioner towards the Rental expenses adjusted with HRA and conveyance charges at actuals for the period 2014-15 to 2018-19 separately as additional O&M Expenses over and above the Normative O&M expenses and thereafter for the ensuing years on the projected basis subject to truing up of tariff, based on actuals.

147. The Respondent, KSEBL has submitted that since the normative O&M expenses is allowed for the project, the claim for additional O&M expenses in lieu of 2nd Township is not in line with the 2014 Tariff Regulations and may be rejected. In response, the Petitioner has submitted that it had to drop the plan for 2nd township due to 'force majeure' conditions and was constrained to accommodate its employees in nearby cities and arrange transport facilities to office. It has also

submitted that since such expenditure is not required to be incurred with staff being accommodated in Township/ Colony as in other projects, this expenditure is not covered under the normative O&M expenses. Accordingly, the Petitioner has claimed such expenses over and above the normative O&M expenses allowed to the generating station. The Petitioner has also contended that the 2014 Tariff Regulations do not prohibit such claim of the Petitioner, arising due to force majeure conditions/ uncontrollable factors in terms of Regulation 3(25) read with Regulation 8(3) and Regulation 54 of the 2014 Tariff Regulations.

148. It is noticed that the Petitioner has claimed additional O&M expenses due to additional arrangement made for accommodation of its employees and their conveyance, in lieu of the difficulty in constructing the township due to non-availability of land. According to the Petitioner, this has resulted in savings in capital expenditure and increase in the O&M expenses, as there will be no additional burden on the consumer, as the claim of additional O&M expenses is against the savings of tariff due to non-capitalization of additional township. The Petitioner has stated that due to non-availability of the land, the idea of Township colony was dropped and thereby the projected capital expenditure of Rs.60 crore was not incurred. As per submissions of the Petitioner, the total annual fixed charges recovery towards the 2nd Township, in the remaining years of the useful life of the generating station, would have been Rs.223 crore, whereas, in terms of the existing arrangement for the employees, it would require additional O&M expenses towards Rent and Conveyance of about Rs.23.15 crore over the same period, resulting into a net savings of Rs.199.38 crore for the beneficiaries.

149. The admissibility of the claim of the Petitioner is examined in the light of the provisions of the 2014 Tariff Regulations. The O&M expense norms for the 2014

tariff period has been duly notified taking into consideration the actual O&M expenses incurred by the generating stations for the period 2008-2013 and after extensive stakeholder consultations. As the said O&M expense norms adequately captures all components as stated by the Petitioner, the prayer of the Petitioner for additional O&M expenses, if allowed, under this head, would, in our view, result in re-opening of the O&M expense norms at this stage. For these reasons, the prayer of the Petitioner for additional O&M expenses in lieu of 2nd Township is not allowed.

B. Ash Disposal expenses

150. The Commission in its order dated 25.4.2019 in Review Petition No. 16/RP/2018 (in Petition No. 152/GT/2015) had allowed the projected 'Ash disposal' expenses for the 2014-19 tariff period as under:

(Rs. in crore)

2014-15	2015-16	2016-17	2017-18	2018-19	Total
60.98	62.70	66.50	70.72	0.00	260.90

151. The Petitioner, in the present petition, has claimed audited actual 'Ash disposal' expenses for the 2014-19 tariff period as under:

(Rs. in lakh)

2014-15	2015-16	2016-17	2017-18	2018-19	Total
6098.44	3791.36	3647.73	3320.87	3340.46	20198.86

152. The Respondent, KSEBL has submitted that the claim towards ash disposal expenses over and above the normative O&M expenses is not in line with the 2014 Tariff Regulations and, therefore, the claim may be disallowed. The Petitioner in its rejoinder has submitted that issue is no more *res integra* as the Ash disposal expenses over and above the normative O&M expenses had already been approved by the Commission vide its order dated 26.12.2017 in Petition No. 152/GT/2015 and by order dated 25.4.2019 in Petition No. 16/RP/2018 read with corrigendum order dated 25.5.2019 subject to truing-up. The Petitioner has also stated that Ash

disposal expenses are statutory in nature and needs to be incurred on a regular basis due to the limited capacity of ash pond and in compliance with the MOEF&CC Notification which mandate 100% ash utilization.

153. The submissions have been considered. The Commission in its order dated 25.4.2019 in Review Petition No.16/RP/2018 (in Petition No.152/GT/2015) had allowed the 'Ash disposal' expenses, based on actuals of the year 2014-15 and projected expenses for the period 2015-19, subject to revision, based on the actual Ash disposal expenses incurred by the Petitioner, at the time of truing up of tariff. The Petitioner has claimed actual expenses towards ash disposal, after adjustment of the revenue earned and has submitted the break-up details, duly certified by Auditor. Accordingly, the audited net ash disposal expenses, after adjustment of the revenue earned, as claimed by the Petitioner is allowed as under:

(Rs. in lakh)

2014-15	2015-16	2016-17	2017-18	2018-19	Total
6098.44	3791.36	3647.73	3320.87	3340.46	20198.86

154. Considering the fact that reimbursement of the ash disposal expenses is being allowed based on special circumstances (limited ash pond storage) for the generating station, these expenses are not made part of the total O&M expenses allowed and the consequent annual fixed charges determined in this order.

Interest on Working Capital

155. Clauses (1) and (2) of Regulation 28 of the 2014 Tariff Regulations provide as under:

> *"28. Interest on Working Capital:*
>
> *(1) The working capital shall cover:*
>
> *(a) Coal-based/lignite-fired thermal generating stations:*
>
> *(i) Cost of coal or lignite and limestone towards stock if applicable for 15 days for pithead generating stations and 30 days for non-pit-head generating stations for*

generation corresponding to the normative annual plant availability factor or the maximum coal/lignite stock storage capacity whichever is lower;

(ii) Cost of coal or lignite and limestone for 30 days for generation corresponding to the normative annual plant availability factor;

(iii) Cost of secondary fuel oil for two months for generation corresponding to the normative annual plant availability factor and in case of use of more than one secondary fuel oil cost of fuel oil stock for the main secondary fuel oil;

(iv) Maintenance spares @ 20% of operation and maintenance expenses specified in regulation 29;

(v) Receivables equivalent to two months of capacity charges and energy charges for sale of electricity calculated on the normative annual plant availability factor; and

(vi) Operation and maintenance expenses for one month.

(2) The cost of fuel in cases covered under sub-clauses (a) and (b) of clause (1) of this regulation shall be based on the landed cost incurred (taking into account normative transit and handling losses) by the generating company and gross calorific value of the fuel as per actual for the three months preceding the first month for which tariff is to be determined and no fuel price escalation shall be provided during the tariff period.

Fuel cost and Energy charges in Working Capital

156. The Commission in its order dated 26.12.2017 in Petition No.152/GT/2015 had allowed interest on working capital based on 'as billed GCV' on provisional basis, as follows:

"165. ……We however direct the Petitioner to place on record the GCV of coal for the preceding three months on "as received" basis in terms of the directions contained in order dated 25.1.2016, at the time of truing-up of tariff of the generating station for 2014-19 in terms of Regulation 8 of the 2014 Tariff Regulations. The "as received GCV" furnished by the Petitioner for the few days of the month of October, 2016 for which sample is taken from the track hopper cannot be considered "as received" GCV of coal since the computation for fuel components in the working capital is undertaken based on the preceding three months i.e. for the month of January, 2014, February, 2014, and March, 2014. Also, the sample taken from track hopper is not in compliance with the Commission order dated 25.1.2016 in Petition No. 283/GT/2014, which specify that the measurement of GCV of coal on "as received" basis shall be taken from the loaded wagons at the unloading point either manually or through the Hydraulic Augur."

157. The Commission vide order dated 26.12.2017 in Petition No.152/GT/2015 allowed the fuel cost for computation of interest on working capital (IWC) based on price and GCV on 'as billed' basis with adjustment formula as Petitioner did not furnish the requisite "as received GCV". The Petitioner has not furnished the details of 'as received' GCV in the true-up petition also and has also not made any prayer

for revision of interest on working capital (IWC) with respect to GCV on 'as received' basis. In this background, we have considered the 'as billed' GCV to be 'as received' GCV, and the components of working capital i.e. the cost of coal for stock (30 days), cost of coal for generation (30 days) and Energy charges (for two months) as allowed in Commission's order dated 26.12.2017 in Petition No.152/GT/2015, has been considered for the purpose of tariff, in this order. Accordingly, the fuel components in working capital have been allowed as per order dated 26.12.2017 in Petition No.152/GT/2015 which is as follows:

(Rs. in lakh)

	2014-15	**2015-16**	**2016-17**	**2017-18**	**2018-19**
Cost of Coal towards stock - 30 days	10458.70	10487.35	10458.70	10710.71	10710.71
Cost of Coal for towards generation - 30 days	10315.43	10315.43	10315.43	10563.99	10563.99
Cost of Secondary fuel oil towards generation - 2 months	300.37	301.19	300.37	307.60	307.60

Working capital for Maintenance Spares

158. The Petitioner, in Form-13B of the petition, has claimed maintenance spares towards working capital as under:

(Rs. in lakh)

2014-15	**2015-16**	**2016-17**	**2017-18**	**2018-19**
3569.31	3786.53	4018.58	4255.10	4488.65

159. Regulation 28(1)(a)(iv) of the 2014 Tariff Regulations provides for maintenance spares @20% of the O&M expenses as specified in Regulation 29 of the 2014 Tariff Regulations. Therefore, in terms of Regulation 29(2) of the 2014 Tariff Regulations, the maintenance spares @20% of the O&M expenses, including water charges and capital spares are allowed are as under:

(Rs. in lakh)

2014-15	**2015-16**	**2016-17**	**2017-18**	**2018-19**
3549.24	3771.31	4005.96	4237.22	4478.13

Working capital for O & M Expenses

160. O&M expenses for 1 month as claimed by the Petitioner in Form-13B for the purpose of working capital are as under:

(Rs. in lakh)

2014-15	2015-16	2016-17	2017-18	2018-19
1487.21	1577.72	1674.41	1772.96	1870.27

161. Regulation 28(a)(vi) of the 2014 Tariff Regulations provides for O&M expenses for one month towards Working Capital for coal-based generating stations. Accordingly, the O&M expenses (for 1 month) are allowed as under:

(Rs. in lakh)

2014-15	2015-16	2016-17	2017-18	2018-19
1478.85	1571.38	1669.15	1765.51	1865.89

162. The difference in the O&M expenses for 1 month and the Maintenance spares allowed as above, as against those claimed by the Petitioner, is due to the fact that while the Petitioner had considered the O&M expenses in lieu of 2nd Township also for calculation under these heads, the same has not been considered (since dis-allowed in this order) in the calculations, while allowing the claims under these heads.

Working capital for Receivables

163. Receivables equivalent to two months of capacity charges and two months of energy charges towards Working Capital (as allowed in Commission's order dated 26.12.2017 in Petition No.152/GT/2015) are allowed as under:

(Rs. in lakh)

	2014-15	2015-16	2016-17	2017-18	2018-19
Fixed charges – for two months	17253.62	17484.40	17233.33	16747.94	16621.10
Energy Charges – for two months	21074.50	21103.97	21074.50	21582.30	21582.30

Rate of interest on working capital

164. Regulation 28(3) of the 2014 Tariff Regulations provides as under:

"Interest on working Capital:

(3) Rate of interest on working capital shall be on normative basis and shall be considered as the bank rate as on 1.4.2014 or as on 1st April of the year during the tariff period 2014-15 to 2018-19 in which the generating station or a unit thereof or the transmission system including communication system or element thereof, as the case may be, is declared under commercial operation, whichever is later."

165. In terms of clause (3) of Regulation 28 of the 2014 Tariff Regulations, the rate of interest on working capital has been considered as 13.50% (Bank rate 10.00 + 350 bps). Accordingly, Interest on working capital has been computed as under:

(Rs. in lakh)

	2014-15	**2015-16**	**2016-17**	**2017-18**	**2018-19**
Working Capital - Cost of coal for stock - 1 month	10458.70	10487.35	10458.70	10710.71	10710.71
Working Capital - Cost of coal for generation - 1 month	10315.43	10315.43	10315.43	10563.99	10563.99
Working Capital for O&M expenses - 1 month of O&M Expenses	1478.85	1571.38	1669.15	1765.51	1865.89
Working Capital - Cost of secondary fuel oil - 2 months	300.37	301.19	300.37	307.60	307.60
Working Capital for Maintenance spares	3549.24	3771.31	4005.96	4237.22	4478.13
Working Capital for Receivables (Fixed charges - 2 months)	17253.62	17484.40	17233.33	16747.94	16621.10
Working Capital for Receivables (Variable charges - 2 months)	21074.50	21103.97	21074.50	21582.30	21582.30
Total Working Capital	**64430.71**	**65035.02**	**65057.44**	**65915.27**	**66129.71**
Rate of Interest	13.50%	13.50%	13.50%	13.50%	13.50%
Interest on Working Capital	**8698.15**	**8779.73**	**8782.75**	**8898.56**	**8927.51**

Annual Fixed Charges

166. Accordingly, the annual fixed charges approved for the generating station for the 2014-19 tariff period is summarized as under:

(Rs. in lakh)

	2014-15	**2015-16**	**2016-17**	**2017-18**	**2018-19**
Return on Equity	26333.62	27727.29	28076.30	28102.15	28295.00
Interest on Loan	27957.86	25842.46	22561.92	18331.74	15953.23
Depreciation	22785.93	23700.34	23949.17	23969.12	24160.20
O&M Expenses	17746.18	18856.55	20029.82	21186.09	22390.63
Interest on Working Capital	8698.15	8779.73	8782.75	8898.56	8927.51
Total	**103521.74**	**104906.37**	**103399.96**	**100487.66**	**99726.57**

167. As stated in paragraph 153 above, the Ash disposal expenses allowed is as below:

(Rs. in lakh)

2014-15	2015-16	2016-17	2017-18	2018-19	Total
6098.44	3791.36	3647.73	3320.87	3340.46	20198.86

168. The annual fixed charges allowed in order dated 1.10.2019 in Petition No.152/GT/2015 and those allowed by this order are as under:

(Rs. in lakh)

Total annual fixed charges allowed in order dated 1.10.2019	99154.50	106314.26	107868.34	106552.83	111287.93
Total annual fixed charges allowed in this order	**103521.74**	**104906.37**	**103399.96**	**100487.66**	**99726.57**

169. The difference between the annual fixed charges already recovered by the Petitioner in terms of the order dated 26.12.2017 read with order dated 1.10.2019 in Petition No.152/GT/2015 and the annual fixed charges determined by this order shall be adjusted in terms of Regulation 8 of the 2014 Tariff Regulations.

DETERMINATION OF TARIFF FOR THE 2019-24 TARIFF PERIOD

170. The Petitioner has also sought determination of tariff of the generating station for the 2019-24 tariff period in terms of the Central Electricity Regulatory Commission (Terms and Conditions of Tariff) Regulations, 2019 (in short 'the 2019 Tariff Regulations'). The capital cost and the annual fixed charges claimed by the Petitioner for the 2019-24 tariff period are as under:

Capital cost claimed

(Rs. in lakh)

	2019-20	2020-21	2021-22	2022-23	2023-24
Opening Capital Cost	487912.60	495633.42	567869.17	570388.32	571685.49
Add: Addition during the year	8043.42	74677.26	4259.96	2230.40	1409.61
Less: De-capitalisation during the year	1138.34	2927.46	2110.64	1119.45	727.30
Add: Normative IDC on excess equity	735.90	446.12	337.89	185.90	158.15
Add: Normative IDC on actual loan	79.84	39.84	31.94	0.32	0.10
Net Addition during the year	7720.82	72235.75	2519.16	1297.17	840.56
Closing Capital Cost	**495633.42**	**567869.17**	**570388.32**	**571685.49**	**572526.06**

Annual Fixed Charges claimed

(Rs. in lakh)

	2019-20	2020-21	2021-22	2022-23	2023-24
Depreciation	24749.94	27550.14	28974.28	28636.91	28520.47
Interest on Loan	19930.00	20362.72	20382.68	17312.75	14126.82
Return on Equity	27697.63	29925.95	32013.23	32113.07	32170.55
Interest on Working Capital	9004.43	9141.36	9303.66	9273.90	9285.71
O & M Expenses	27212.89	28222.13	30425.80	30830.27	32146.01
Ash Disposal Expenses	3425.59	3416.23	3416.23	3416.23	3425.59
Additional Tax	38.28	38.28	0.00	0.00	0.00
Total	**112058.77**	**118656.81**	**124515.87**	**121583.13**	**119675.14**

Capital Cost

171. Regulation 19 of the 2019 Tariff Regulations provides as under:

> *"19. Capital Cost: (1) The Capital cost of the generating station or the transmission system, as the case may be, as determined by the Commission after prudence check in accordance with these regulations shall form the basis for determination of tariff for existing and new projects.*
> xxxx
> *(3) The Capital cost of an existing project shall include the following:*
>
> *(a) Capital cost admitted by the Commission prior to 1.4.2019 duly trued up by excluding liability, if any, as on 1.4.2019;*
>
> *(b) Additional capitalization and de-capitalization for the respective year of tariff as determined in accordance with these regulations;*
> *(c) Capital expenditure on account of renovation and modernisation as admitted by this Commission in accordance with these regulations;*
>
> *(d) Capital expenditure on account of ash disposal and utilization including handling and transportation facility;*
>
> *(e) Capital expenditure incurred towards railway infrastructure and its augmentation for transportation of coal up to the receiving end of generating station but does not include the transportation cost and any other appurtenant cost paid to the railway; and*
>
> *(f) Capital cost incurred or projected to be incurred by a thermal generating station, on account of implementation of the norms under Perform, Achieve and Trade (PAT) scheme of Government of India shall be considered by the Commission subject to sharing of benefits accrued under the PAT scheme with the beneficiaries."*

172. The Petitioner has claimed the opening capital cost of Rs.487912.60 lakh as on 1.4.2019. However, in accordance with Regulation 19(3) of the 2019 Tariff Regulations, the closing capital cost of Rs. 478969.24 lakh as on 31.3.2019, as approved in this order, for the 2014-19 tariff period, has been considered as the opening capital cost as on 1.4.2019, for determination of tariff for the 2019-24 tariff period.

Additional Capital Expenditure

173. Regulations 25 and 26 of the 2019 Tariff Regulations provide as under:

"25. Additional Capitalisation within the original scope and after the cut-off date:

(1) The additional capital expenditure incurred or projected to be incurred in respect of an existing project or a new project on the following counts within the original scope of work and after the cut-off date may be admitted by the Commission, subject to prudence check:

(a) Liabilities to meet award of arbitration or for compliance of the directions or order of any statutory authority, or order or decree of any court of law;

(b) Change in law or compliance of any existing law;

(c) Deferred works relating to ash pond or ash handling system in the original scope of work;

(d) Liability for works executed prior to the cut-off date;

(e) Force Majeure events;

(f) Liability for works admitted by the Commission after the cut-off date to the extent of discharge of such liabilities by actual payments; and

(g) Raising of ash dyke as a part of ash disposal system.

(2) In case of replacement of assets deployed under the original scope of the existing project after cut-off date, the additional capitalization may be admitted by the Commission, after making necessary adjustments in the gross fixed assets and the cumulative depreciation, subject to prudence check on the following grounds:

(a) The useful life of the assets is not commensurate with the useful life of the project and such assets have been fully depreciated in accordance with the provisions of these regulations;

(b) The replacement of the asset or equipment is necessary on account of change in law or Force Majeure conditions;

(c) The replacement of such asset or equipment is necessary on account of obsolescence of technology; and

(d) The replacement of such asset or equipment has otherwise been allowed by the Commission.

26. Additional Capitalisation beyond the original scope

(1) The capital expenditure, in respect of existing generating station or the transmission system including communication system, incurred or projected to be incurred on the following counts beyond the original scope, may be admitted by the Commission, subject to prudence check:

(a) Liabilities to meet award of arbitration or for compliance of order or directions of any statutory authority, or order or decree of any court of law;

(b) Change in law or compliance of any existing law;

(c) Force Majeure events;

(d) Need for higher security and safety of the plant as advised or directed by appropriate Indian Government Instrumentality or statutory authorities responsible for national or internal security;

(e) Deferred works relating to ash pond or ash handling system in additional to the original scope of work, on case to case basis:

Provided also that if any expenditure has been claimed under Renovation and Modernisation (R&M) or repairs and maintenance under O&M expenses, the same shall not be claimed under this Regulation;

(f) Usage of water from sewage treatment plant in thermal generating station.

(2) In case of de-capitalisation of assets of a generating company or the transmission licensee, as the case may be, the original cost of such asset as on the date of de-capitalisation shall be deducted from the value of gross fixed asset and corresponding loan as well as equity shall be deducted from outstanding loan and the equity respectively in the year such de-capitalisation takes place with corresponding adjustments in cumulative depreciation and cumulative repayment of loan, duly taking into consideration the year in which it was capitalised."

174. The Petitioner has claimed additional capital expenditure in respect of assets/ works which form part of the original scope of work of the project, but after the cut-off date, in terms of the provisions of Regulation 25 of the 2019 Tariff Regulations. It has also claimed additional capital expenditure in respect of assets/ works which are beyond the original scope of work of the project in terms of the provisions of Regulation 26 of the 2019 Tariff Regulations. Accordingly, the year-wise projected additional capital expenditure claimed by the Petitioner for the 2019-24 Tariff Period is summarized and examined under:

(Rs. in lakh)

Sl. No.	Head of work/Equipment	Regulations	2019-20	2020-21	2021-22	2022-23	2023-24
A	**Projected Additional Capitalisation within the original scope of work, but after the cut-off date**						
1	Cost of Land &Site	25(1)(e)	3881.64	-	-	-	-
2	General Civil Works-Boundary Wall	25(1)(e)	160.00	-	-	-	-

Projected additional capital expenditure within the original scope of work of the project under Regulation 25(1)(e) of the 2019 Tariff Regulations

175. Regulation 25(1)(e) of the 2019 Tariff Regulations provide as under:

"25. Additional Capitalization within the original scope and after the cut-off date:

(1) The additional capital expenditure incurred or projected to be incurred in respect of an existing project or a new project on the following counts within the original scope of work and after the cut-off date may be admitted by the Commission, subject to prudence check:

(a) xxx

xxxxx

(e) Force Majeure events;

176. The following additional capital expenditure has been claimed by the Petitioner in respect of assets/ works which form part of the original scope of work of the project, but after the cut-off date, under Regulation 25(1)(e) of the 2019 Tariff Regulations:

(Rs. in lakh)

Head of work / Equipment	**2019-20**	**2020-21**
a. Railway Infrastructure Package (inclusive of IDC)	-	68506.24
b. Cost of Land & Site	3881.64	-
c. General Civil Works-Boundary wall	160.00	-

177. The Petitioner has claimed projected additional capital expenditure of Rs.68506.24 lakh for 'Railway Infrastructure Package' in 2020-21 under Regulation 25(1)(e) of the 2019 Tariff Regulations and has submitted the following:

a) Petitioner envisaged Railway Infrastructure Package to facilitate the transportation of coal to the Project. The Railway Package was planned to be executed in three phases, Phase I, Phase II and Phase III. Phase-I is essential for existing Stage-I (of the generating station with the approved Railway Project cost of Rs.574 crore (earlier Rs.405 crore) with a total approved Project cost of Rs.5696 crore.

b) The land acquired for Phase I, Stage-1 by the Petitioner was 82.01 acres, which comprises of 64.23 acres of Private land, 17.78 acres of Government land (which includes 4.81 acres of Krishi land). Additionally, this Phase included Railway land of 17 acres. The Private land and Government land is spread over nine villages. The Petitioner earnestly started the work for completion of the Railway Project immediately after Board approval and tying up finance in 2008.

178. The Petitioner has submitted that the completion of Railway Infrastructure Package was delayed due to reasons beyond the control of the Petitioner. The

Petitioner has also stated that it had already submitted detailed reasons in Petition No.152/GT/2015 for the delay in the Railway Infrastructure Package. The Petitioner has further submitted that the execution of few Project packages including the Railway Infrastructure Package was delayed on account of reasons, primarily in acquisition of requisite land parcels for this package, which are beyond the control of the Petitioner and, therefore, the capitalization of these packages could not be achieved within the cut-off date i.e. 31.3.2015. The summary of the reasons for the delay in the completion of the Railway Package are as below:

i) Re-alignment of the Dedicated Freight Corridor and revision in Railway norm of elevation from 1:400 to 1:1200;

ii) Rehabilitation and Resettlement (R&R) scheme for acquisition of land required for Railways Infrastructure has taken longer time than anticipated due to irregularities in payments made by the District Land Acquisition Officer (DLAO);

iii) Denial of allotment of total quantum of land by Eastern Railways;

iv) Multiple technical issues raised and multiple revisions of approved DPR, ESP, ESSP, S&T caused by Eastern Railways;

v) Unlawful encroachments in Railway lands and inaction by the Government of Jharkhand (GoJ) and Railways;

vi) Ownership claims by local residents on GM land (Gair Majarua land) allocated to Petitioner and inaction by GoJ;

vii) Disputes raised with respect to ownership of Private land by landowners and inaction by GoJ to resolve the same;

viii) Widespread disputes &scams relating to payment of compensation to wrong persons by the Government officials;

ix) Litigation with respect to acquisition of land and compensation thereof; and

x) Delay in the appointment of DLAO to oversee disputes pertaining to acquisition of land by Petitioner.

179. The Petitioner in Annexure-P/6 of the petition has furnished the details of time and cost overrun of the Railway Infrastructure Package along with justification. The Petitioner has submitted that it made all efforts to expedite the possession of land

parcels and completed the construction in those patches of land parcels in phases as and when the possession of these parcels were obtained, which at times needed changes in design and scope due to actual site measurements being different from estimates in design, when access was available for those parcels. The Petitioner has submitted that with the present status and speed of resolution of disputes, it is expected that the entire land related issues pertaining to Railway Infrastructure Package would be resolved and possession of all land parcels would be obtained by the end of June 2020 and accordingly the Railway Infrastructure Package would be completed by 31.3.2021. It has stated that land acquisition has been categorized as an 'uncontrollable factor' under the 2019 Tariff Regulations if the delay is for reasons not attributable to the Petitioner. The Petitioner has added that the significance of completing the Railway Infrastructure Package also arises from the fact that the present arrangement of transporting coal through trucks has been seen as an environmental concern and from fuel security point of view for ensuring supply to the beneficiaries on completion of the Railway Infrastructure Package gains utmost importance. The Petitioner has submitted that the delay in commissioning of Railway Infrastructure Package is mainly due to land related issues which were totally out of control of the Petitioner and the same is a 'force majeure' condition, which is to be considered and allowed in terms of Regulation 3(25) read with Regulation 25 of the 2019 Tariff Regulations.

180. As regards cost overrun of the Railway Infrastructure Package, the Petitioner has submitted that the same was beyond the control of the Petitioner and the increase in the Railway Infrastructure Package cost forced the Petitioner's Board to re-allocate the project cost. In addition, the Petitioner has stated that the Railway Infrastructure Package contract which was initially awarded to M/s L&T had to be split into three parts, on account of the unforeseen delays and was reallocated

among the initial contractor M/s L&T, and the new contractors M/s Amex and M/s Kanwar. The Petitioner's Board in its meeting dated 16.3.2019 had approved the cost and internal allocations under the 'Railway Infrastructure cost' for Rs.574.66 crore excluding IDC. It has further stated that during the execution of the packages identified under Railway infrastructure, the cost allocation was changed and approved by the Board for revised allocation, keeping the overall cost of Railway Infrastructure package within the approved budget of Rs.574.66 crore in the Board meeting dated 16.10.2019. The Petitioner has submitted that the total IDC is Rs.152.75 crore on Railway Infrastructure Package. We note that the total Railway Infrastructure Package cost approved by the Board works out to Rs.712.14 crore (Rs.559.38 crore + Rs.152.75 crore) out of which the Petitioner has capitalized and claimed Rs.28.13 crore (Rs.24.13 crore + Rs.4.49 crore of IDC) during 2015-16 which has not been allowed (as discussed in earlier part of this order) as the Railway Package could not be put to use during 2015-16.

181. The Petitioner has claimed projected additional capital expenditure of Rs.3881.64 lakh in 2019-20 towards the cost of 'Land & Site' and additional capitalization of Rs.160.00 lakh in 2019-20 towards 'General Civil Works' under Regulation 25(1)(e) of the 2019 Tariff Regulations and has submitted the following:

(a) Land & Site

a) The Petitioner has envisaged the revised demand for 115 acres GM land as per present circle rate at Rs.35.28 crore. Also, the payment for Krishi farmland for 4.81 acres (80% of which has already been paid) for Railways corridor consisting of land in Kumthol and Poddardih village and the remaining 20% of payment demand (for Rs.0.60 crore) is envisaged in 2019-20. Similarly, 80% payment for 6.96 acres of GM land for Stage 1 and 6.01 acres of land for Stage-2 meant for the Railway corridor has been paid and the balance demand for 20% is estimated at Rs. 2.54 crore in 2019-20.

b) Even after continuous follow-up, the balance demand is yet to be received from the Govt. of Jharkhand. The same is beyond the control of the Petitioner and ought to be considered as an 'uncontrollable factor'.

c) The detailed submissions justifying the 'force majeure' delay on account of land issues had already been furnished in the truing-up of tariff in this petition and the same are not repeated here for the sake of brevity. The detailed reasons for the delay have been finished in Annexure P/5 of the petition.

(b) General Civil Works

The delay in the execution of works in General Civil Works (GCW) Package is on account of various reasons beyond the control of the Petitioner as under:

(a) The balance works to be carried out under the GCW Package is mainly on account of the un-finished portion of the boundary wall around the Ash Pond and construction of boundary wall in 226 acres land.

(b) Although the remaining work is related to Ash Pond and construction of wall, the same is included under the 'General Civil Works' owing to the nature of the balance scope of work. The completion of the boundary wall around the Ash Pond has been delayed on account of land related issues, the resolution of which has taken much longer time than envisaged earlier. Therefore, the balance work of the boundary wall is expected to be completed by 2019-20.

(c) The detailed submissions justifying the delay in execution of General Civil Works has been furnished in the truing-up of tariff petition in Annexure P/12 of the petition and the same are not repeated herein for sake of brevity.

182. The Respondent, KSEBL has mainly submitted that the Petitioner is not eligible to seek the additional capitalization of the expenditure towards cost of land & site and for Railway Infrastructure Package, after the cut-off date. It has also submitted that there has been lack of co-ordination on part of the Petitioner with the local administration for resolution of disputes, which has led to the inordinate delay in the execution of the work. Accordingly, the Respondent has prayed that the impact of cost & time overrun for the aforesaid work may not be passed on to the beneficiaries.

183. The submissions have been considered. The Petitioner, in Petition No.152/GT/2015, had furnished detailed reasons for the delay in the execution of the Railway Infrastructure Package and submitted that the execution of few project packages including Railway Infrastructure Project package was delayed primarily on account of delay due to acquisition of requisite land parcels for this package, which

are beyond the control of the Petitioner and fall under 'force majeure' conditions. It had, therefore, submitted that the capitalization of expenditure on the scheme could not be achieved within the cut-off date and, accordingly, sought for extension of the cut-off date of the project till 31.3.2019 in view of the constraints faced in the execution of few project packages including Railways. Vide order dated 26.12.2017 in Petition No.152/GT/2015, the Petitioner was granted liberty to approach the Commission for additional capitalization, based on the actual additional expenditure incurred for these assets. The Petitioner, in this petition for truing up of tariff for the 2014-19 tariff period, claimed additional capitalization of these packages (Land & Site and GCW) after the cut-off date (for 2015-19) on the ground that these packages could not be completed within the cut-off date, due to 'force majeure' conditions, which were beyond the control of the Petitioner. It was also submitted by the Petitioner that most of the project packages were completed in 2015-16, except for the Railway System, GCW and Land & Site, which were expected to be completed by 31.3.2021. It was, however, submitted that some assets in these packages were put to use and part-capitalized during the 2014-19 tariff period and the balance to be capitalised during the 2019-24 tariff period.

184. It is noticed that the Petitioner had claimed actual additional capitalization of Rs.2861.56 lakh (including IDC of Rs.448.94 lakh) in 2015-16, towards Railway Infrastructure Package, forming part of the original scope of work of the project and had submitted that the said package was yet to be completed and operationalized by the Petitioner, owing to severe land acquisition disputes as narrated therein including submissions made in Petition No.152/GT/2015. However, on prudence check, it was evident that the 'Railway Infrastructure Package' had not been completed and put to use by the Petitioner. Only certain civil assets like roads, over-bridges and under-

passes were constructed and the expenditure incurred on these was sought to be capitalized. Since the construction of these civil assets do not have any nexus with the generation of power, the Commission, in this order, had not permitted the additional capitalization of these assets, until the Railway Infrastructure Package was completed. In other words, the capitalization of expenditure on 'Railway Infrastructure Package' after the cut-off date was never considered as the same had not been completed and put to use by the Petitioner. As regards the delay in Railway Infrastructure Package, the Petitioner has made detailed submissions in Annexure P/6 of the petition, similar to those made in Petition No.152/GT/2015. It is evident from these submissions that the delay was mainly on account of 'land acquisition' issues, which also involved litigation before the Courts and payment of compensation thereof. It is pertinent to mention that the Railway Infrastructure Package could not be commissioned until all land parcels in the route were available with the Petitioner free of any encumbrance. It is noticed that Regulation 22(2) of the 2019 Tariff Regulations provides for 'land acquisition' as an 'uncontrollable factor', except where the delay is attributable to the generating company or the transmission licensee, as the case may be. The relevant portion of the said regulation is extracted hereunder:

> *"The 'uncontrollable factors' shall include but shall not be limited to the following:*
>
> *a. Force Majeure events;*
> *b. Change in law; and*
> *c. Land acquisition except where the delay is attributable to the generating company or the transmission licensee."*

185. From the submissions of the Petitioner with regard to time overrun for Railway Infrastructure Package read with the submissions in Annexures P/5 & P/12 of this petition, it is noticed that a series of events had affected the progress of resolution of land acquisition issues. The Petitioner had made various correspondences/ communication with the local administration for expediting the land acquisition

process for Railway project and had also approached the Hon'ble High Court of Jharkhand seeking directions upon the local administration. Also, the identification of the rightful owners, the correction of earlier awards in terms of the directions of the Hon'ble High Court, the submission of claims and payment of compensation and obstacles created by encroachment have all led to the delay in possession of land and the construction and final commissioning of the said package got delayed. The Petitioner has taken efforts to expedite the possession of land parcels and to complete the construction in those patches of land parcels in phases as and when the possession of these parcels was obtained. We have, in paragraph 38 to paragraph 46 of this order, examined the submissions of the Petitioner with regard to the delay in the availability of land & site and the delay in execution of the General Civil Works, consequent upon the non-availability of land, attributed to the change in policy of State Government and Order of the Hon'ble High Court, and allowed the additional capitalisation of the expenditure claimed by the Petitioner for the period 2015-19 under Regulation 14(3)(i) of the 2014 Tariff Regulations, for compliance with the orders of the Hon'ble Court. Considering the fact that these are balance works which have spilled over from 2018-19 and keeping in view that the Railway Infrastructure Package, being an interdependent activity, contingent upon the clearance of land acquisition issues, we hold, that the delay is on account of events which are not attributable to the Petitioner. In our considered view, the delay due to non-availability of land & site, which has caused the delay in the execution of the General Civil Works for the period 2015-19, holds good for the delay in the completion of Railway Infrastructure Package for the period 2019-21 also. For these reasons, the projected additional capitalization of Rs.68506.24 lakh for 'Railway Infrastructure Package' in 2020-21 and the projected additional capitalization of Rs.4041.64 lakh (Rs.3881.64 lakh for cost of Land and Site and Rs.160.00 lakh for

General Civil Works) in 2019-20 is allowed under Regulation 25(1)(a) of the 2019 Tariff Regulations. However, the total cost including cost disallowed for the year 2015-16 on Railway Package shall be considered and dealt on merits, after prudence check, at the time of truing-up.

Projected additional capital expenditure under Regulation 25(2)(b) of the 2019 Tariff Regulations

186. Regulation 25(2)(b) of the 2019 Tariff Regulations provide as under**:**

> *"25(2) In case of replacement of assets deployed under the original scope of the existing project after cut-off date, the additional capitalization may be admitted by the Commission, after making necessary adjustments in the gross fixed assets and the cumulative depreciation, subject to prudence check on the following grounds:*
>
> *(a) xxxxxx;*
>
> *(b) The replacement of the asset or equipment is necessary on account of change in law or Force Majeure conditions;*
>
> *xxxx"*

187. The following additional capital expenditure has been claimed by the Petitioner under Regulation 25(2)(b) of the 2019 Tariff Regulations:

(Rs. in lakh)

188. As regards the claim for additional capitalization on items/ assets like Coal Mill Internals, Coal Mill Journal Assembly, Economiser Coil (both Upper & Lower Bank), LTSH Coil (both Upper & Lower Bank), Refurbishment of Economiser Coil Unit 2, Refurbishment of Economiser Coil Unit1, Refurbishment of Pulverizer Internals, Re-Heater Straight Tubes & Bends, the Petitioner has submitted that due to poor quality of coal, higher quantity of ash is generated and coarse type of ash is produced in the generating station. It has also stated that due to the abrasive nature and more quantity of ash, the life of these equipment has reduced and are, therefore, required to be replaced. Accordingly, it has submitted that the replacements of these assets are necessary on account of Force majeure conditions. The Respondent, KSEBL has submitted that the amount claimed under this head mainly involves expenditure projected for replacement of assets or equipment and is covered under R&M expenses and, therefore, the claim may be rejected.

189. The matter has been considered. The 2019 Tariff Regulations do not contain any provision for correlating the life of the asset/ equipment corresponding to the quality of coal. Different generating stations use different quality of coal as per the Fuel Supply Agreements (FSA) executed by them with coal companies, depending

upon the mine from which coal is procured. The Petitioner has based its claim of replacement of assets to poor quality of coal that has led to higher generation of ash apart from ash being coarse in nature. The Petitioner has submitted that due to abrasive nature and higher quantity of ash, the life of equipment have reduced and, therefore, are required to be replaced. The Petitioner has submitted that these events (higher quantity and coarse nature of ash which being abrasive, have lowered life of equipment/ asset) are Force majeure conditions. However, we note that the Petitioner has not furnished whether the coal received at the generating station is as per the provisions of FSA and as per the design coal considered at the time of selection of the equipment/ technology. The Petitioner has also not mentioned if the quality of coal being supplied is different from the one agreed in FSA with coal companies and whether the matter has been taken up with coal companies. Moreover, reduction in the life of equipment and replacement of the same due to poor quality of coal, cannot qualify as a force majeure condition to be eligible for grant of relief under Regulation 25(2)(b) of the 2019 Tariff Regulations. In view of this, the projected additional capital expenditure claimed in this respect is not allowed.

190. As regards the claim of the Petitioner under Regulation 25(2)(b) of the 2019 Tariff Regulations for additional capitalization of expenditure on items/ works such as C.T. fan gearbox, Centrifugal compressor & motor for BTG, Centrifugal compressors for Ash Plant, Replacement of slew hydraulic motor of stacker-cum-reclaimer, Vacuum Pump, Refurbishment of U1 & U2 HP bypass system and Cooling tower internals, the justification furnished by the Petitioner is as below:

C.T. Fan Gearbox

The Gear Boxes installed in Cooling Towers are operational since COD of the units and in continuous operation over 8 years. Moreover, these gearboxes are placed inside the Cooling tower cell, so they work under highly moist

environment and probability of water ingress inside the gearbox is very high. The combined effect of ageing and operating in highly moist environment has resulted in more chances of premature failure as is also evident from past records. Consequently, the unavailability of CT fan due to breakdown of Gear Box can result in less cooling of hot circulating water from condenser, leading to less condensation of inlet steam and increase in back pressure at turbine exhaust. Higher back pressure means low vacuum which in-turn increases inlet steam consumption and deteriorates heat rate of Turbine Generator (TG) cycle. In worst case, the generation of the unit may also need to be reduced to maintain vacuum and backpressure of the turbine. In view of the above facts and to increase the availability and reliability of units for smooth, uninterrupted power supply, it has been proposed for procurement of 50% of the total installed gear boxes and internal gears to replace the existing ones. The cost of Rs.2 Crore shall be incurred in 2020-21 for the same, which will avoid any unavailability of cooling tower fans due to sudden breakdown of Gear Box in running condition.

Centrifugal Compressor and motor for Boiler Turbine Generator

It is proposed to replace the existing screw compressors of BTG with centrifugal compressors of suitable capacity. The proposal is based on the running experience of screw compressors installed at site. Majority of screw compressor manufacturers do not support site/local repairs and overhauls of the screw elements instead recommend for replacement based on running hours. As per the OEM, the expected service life is approximately 4 years (32000 operating hours) for oil free air elements. To maintain reliability and avoid unexpected failures, both the air ends are to be replaced as per schedule. For installed capacity of 06 nos. of such compressors, material cost of air ends alone works out to Rs.3 crore for every 6 years (considering Rs.50 lakh for 01 set of HP and LP screw elements). Over a remaining service period they prove to be cost effective compared to procurement of capital spares for such major overhaul of screw compressors every 4 years as recommended by the OEM. The total cost of Rs.7.5 crore is estimated to be spent in 2 years i.e. Rs.3.5 crore in 2020-21 and Rs.4 crore in 2021-22. In view of the envisaged overall cost benefits from the proposed project, the capital expenditure for installation of centrifugal compressors for BTG instrument and service air requirements may kindly be approved.

Centrifugal Compressors for Ash Plant

Both Stage-I & II compressors are screw compressors and average life of such compressors are 4-5 years or 40000 hours and require repair/replacement for reliable operation. However, manufacturers of screw compressors do not support site/local repairs and overhauls of the air elements of compressor instead recommend for replacement based on running hours. As demonstrated above, it is expected that the overall cost of such recurring replacement over

remaining plant life would be higher compared to one-time capital expenditure required for substituting screw compressors with centrifugal compressors. It is proposed to undertake phase-wise replacement of Stage-I conveying Air compressors by centrifugal compressor. The total project cost is estimated to be Rs.12 crore which will be capitalized phase-wise in 2020-21, 2021-22, 2022-23 and 2023-24.

Cooling Tower Internals

Over a period of continuous use under the highly moist environment the combined with the effect of ageing has resulted in more chances of premature failures of Cooling Tower Internals. Therefore, for reliable operation of cooling tower healthiness of all components, viz, PVC fills, drive shaft, drift eliminators, flow control butterfly valves and blades of axial flow fans of cooling tower is very much essential. In view of the above facts and to increase availability and reliability of units for smooth, uninterrupted power supply, it has been proposed for procurement of IDCT internal spares of Rs.4 crore spread over 2020-21 to 2023-24 to replace the existing ones for smooth running of plant.

Refurbishment of U1 & U2 HP Bypass system

It is submitted that due to frequent failure of various components in the servo valve, the reliability and availability of this critical system has reduced drastically. Malfunction in the servo valve has led to inadvertent opening of the HP bypass valve during normal operation of the unit leading to loss of generation. Also, on many occasions due to blocking in these servo valves, the bypass valves failed to open whenever required leading to delay in the Unit start up or Unit shut down activity. Meanwhile, the Petitioner is working out to figure out the root cause of such failures and solution for the same. After the analysis, this expenditure may be incurred during 2019-20 to 2023-24 and, therefore, it is requested to the Commission to grant liberty to the Petitioner to seek capitalization against Refurbishment of HP bypass hydraulic servo system under applicable regulations, subject to prudence check at the time of truing-up exercise.

Replacement of slew hydraulic motor of stacker-cum-reclaimer

During reclaiming, abnormal pressure and speed variation has been observed. In view of above observation, the OEM was called on-site to assess the situation and rectify the issue. On inspection, heavy wear and tear of the hydraulic system was observed and the OEM has advised to operate with 50% reduced slewing motion and replacement of the slew hydraulic motor including brakes. The observations and corrective measures as suggested by the OEM has been recorded in the minutes of the meeting dated 8.3.2019 and minutes of the meeting dated 2.7.2019. The total cost of the proposal would be of Rs.1.60 crore in 2021-22 and the same is based on the offer submitted by authorized distributor.

Vacuum Pump

The vacuum pumps have cast iron impellers which have a service life of about 5 year. The OEM (M/s Edwards ltd.) does not recommend any major welding repairs on the impeller as it compromises the safety of impeller during operation. One no spare vacuum pump available under project mandatory spares was installed during annual over-hauling in place of 01 number pump and local repair was made for the other pump. Similarly, heavy erosion was also recorded at both the impellers at Unit 2 during its AOH in May, 2019. Impeller blade and casing damage has occurred due to dislodging of the worn-out blade causing permanent damage to other blades as well as the casing. Therefore, the proposed capital expenditure of Rs.4 crore (Rs.2 crore in 2020-21 and Rs.2 crore in 2021-22) for the procurement of vacuum pump may be approved.

191. The submissions have been considered. The Petitioner, in justification of the claim for the aforesaid items/ assets, has mainly submitted that these equipment are required to be procured as 'spares' or on account of the fact that these items have 'worn out' or likely to be 'unserviceable' in due course of time. The Petitioner has also submitted that OEM has recommended their replacement in place of repair or change of the defective part. It is observed that in some of the cases, the Petitioner's claim is premised on poor quality of coal and in some cases, the claim is based on the recommendations of OEM. These factors do not, in our view, constitute change in law or a force majeure event, warranting any relief to the Petitioner. However, after examining the justifications furnished by the Petitioner, it is observed that in case of Centrifugal Compressor & motor for Boiler Turbine Generator and Centrifugal Compressors for Ash Plant, the OEM has suggested the replacement owing to the obsolescence/ unavailability of spares/ service support by OEM. In view of this, the projected additional capitalization of Rs.750.00 lakh (Rs.350.00 lakh in 2020-21 and Rs.400.00 lakh in 2021-22) for Centrifugal Compressor & motor for Boiler Turbine Generator and Rs.1200.00 lakh (Rs.300 lakh during each year from 2020-24) is allowed under Regulation 25(2)(c) of the 2019 Tariff Regulations. The Petitioner is

however, directed to furnish the recommendations of OEM at the time of truing-up of tariff.

192. However, for other items such as coal mill internals, cooling tower internals, economizer coil DM plant equipment, C.T fan gearbox etc. required to be replaced before the life of plant due to wear/ tear, we hold that the failure/ replacement of items does not fall under force majeure. However, replacement of such consumables may be met from the capital spares and may be claimed under capital spare consumption during truing up. In view of this, the additional capital expenditure claimed by the Petitioner is not allowed. Further, the prayer of the Petitioner for granting liberty to seek capitalization against 'Refurbishment of HP bypass hydraulic servo system' at the time of truing-up shall be considered as per the merit and provisions of regulations at the time of truing-up of tariff.

193. The Petitioner has also claimed additional capitalization for some minor assets/ items like Flat top freezers (2 numbers), Godrej storewell (12 numbers for guest house), office chairs, LG 230 litres fridge (5 numbers) and for replacement of township ACs. As regards flat top freezers, the Petitioner has submitted that their replacement is required as the existing units are not functioning properly due to deteriorated condition. As regards Godrej storewell, it has been submitted that the wooden setup of cupboards in DVC guest houses has deteriorated and a replacement by Godrej steel cupboards will help in damage-free arrangements. For office chairs, the Petitioner has stated that the replacement of chairs (including those in conference rooms) for officers and guests to ensure proper ergonomics and safety of individuals. In respect of LG 230 litres fridge, it has been submitted that as part of providing basic amenities at project office, gate house, CHP, switchyard and technical building pantry, the fridge, being used has completed its useful life and is

not commensurate with the useful life of the project. For replacement of township ACs, the Petitioner has stated that all ACs are more than 7 years old and, therefore, their replacement will be required by 2023-24 and will be done in a phased manner, depending on the condition of the units at various blocks in township. The Petitioner has contended that these minor items have life cycle of 7-8 years and need recurrent replacement. It has stated that the provision for Compensation Allowance that existed in the 2014 Tariff Regulations to compensate for addition of minor assets, is not there in the 2019 Tariff Regulations. Hence, the Petitioner has stated that there is no specific provision to claim the expenses for minor asset additions, which are important for the power plant and significant cost of Rs.0.81 crore is expected to be incurred during the 2019-24 tariff period. Accordingly, the Petitioner has submitted that the additional capitalization of these assets may be allowed in exercise of power vested under Regulation 76 read with Regulation 25(2)(b) of the 2019 Tariff Regulations. The submissions of the Petitioner have been considered. Since the additional capital expenditure claimed by the Petitioner do not relate to the operation of the generating station and are minor in nature, the claim for additional capitalization under Regulation 25(2)(b) of the 2014 Tariff Regulations is not allowed.

Projected additional capitalisation of the expenditure under Regulation 25(2)(c) of the 2019 Tariff Regulations

194. The following additional capital expenditure has been claimed by the Petitioner in respect of assets/ works, which are within the original scope of work of the project, but after the cut-off date, under Regulation 25(2)(c) of the 2019 Tariff Regulations:

(Rs. in lakh)

Sl. No.	**Head of work / Equipment**	**2019-20**	**2020-21**	**2021-22**	**2022-23**	**2023-24**
1	Induced Draft fan motor with Variable Frequency Drive replacement	0.00	450.00	450.00	450.00	450.00

2	Laboratory Instruments	0.00	21.94	57.08	52.90	22.11
3	Replacement of Battery	0.00	80.00	80.00	90.00	-
4	Up-gradation of CHP main PLC	0.00	60.00	0.00	0.00	0.00
5	Up-gradation of DMP PLC	0.00	50.00	0.00	0.00	0.00
6	Up-gradation of Raw water PLC	0.00	50.00	0.00	0.00	0.00

195. Regulation 25(2)(c) of the 2019 Tariff Regulations provides as under:

"25. Additional capitalization within the original scope and after the cut-off date:

(2) In case of replacement of assets deployed under the original scope of the existing project after cut-off date, the additional capitalization may be admitted by the Commission, after making necessary adjustments in the gross fixed assets and the cumulative depreciation, subject to prudence check on the following grounds:

(c) The replacement of such asset or equipment is necessary on account of obsolescence of technology; and..."

Induced Draft fan motor with Variable Frequency Drive replacement

196. The Petitioner has claimed additional capitalization of Rs.1800.00 lakh (Rs.450.00 lakh in 2020-21, Rs.450.00 lakh in 2021-22, Rs.450.00 lakh in 2022-23 and Rs.450.00 lakh in 2023-24) for Induced Draft fan motor with Variable Frequency Drive replacement under Regulation 25(2)(c) of the 2019 Tariff Regulations. The Petitioner has submitted that the said item/ asset was supplied by M/s BHEL and is in service for more than 7 years. It has submitted that there have been multiple instances of channel tripping in the past, leading to loss of generation and reliability and from past records and minutes recorded in MoM dated 3.8.2019 with M/s BHEL, a tripping of particular LCI channel continued for more than 15 days in presence of BHEL supervisory engineer and the tripping count reached to more than 40 days. In view of the technological obsolescence, the recommendation of OEM for up-gradation and to address issue of present unreliability of the system, the Petitioner has proposed to retrofit the existing system with the latest technology, having improved diagnostic features and to achieve reliable and sustainable operation of ID fan.

197. The matter has been examined. The Petitioner has submitted that there have been multiple instances of channel tripping in the past and has referred to the MoM dated 3.8.2019 with OEM. On scrutiny of various correspondences made by the Petitioner with OEM, we find that the replacement of the asset was based on the expert opinion of the OEM as recorded in the said MoM. In view of this, the claim of the Petitioner for additional capitalization of Rs.450.00 lakh in 2020-21, Rs.450.00 lakh in 2021-22, Rs.450.00 lakh in 2022-23 and Rs.450.00 lakh in 2023-24 for the said asset is allowed along with the corresponding decapitalization of Rs.284.43 lakh in 2020-21, Rs.271.56 lakh in 2021-22, Rs.259.28 lakh in 2022-23 and Rs.247.55 lakh in 2023-24. The Petitioner is, however, directed to furnish the obsolescence certificate from the competent authority at the time of truing-up of tariff.

Laboratory Instruments

198. The Petitioner has claimed projected additional capitalization of Rs.154.03 lakh (Rs.21.94 lakh in 2020-21, Rs.57.08 lakh in 2021-22, Rs.52.90 lakh in 2022-23 and Rs.22.11 lakh for 2023-24) for Laboratory Instruments under Regulation 25(2)(c) of the 2019 tariff Regulations. The Petitioner has submitted that 'laboratory instruments' are getting old i.e. more than 8 to 10 years and new instruments need to be procured. It has also stated that laboratory Instruments presently in service at site, are quite old and have outlived their service life. The Petitioner has also submitted that some of these machines are slow in response and hang quite frequently and spares and service support for old machines are restricted due to component obsolescence. The Petitioner has further stated that OEM has declared the obsolescence of most spares and that most of the instruments cannot be serviced or repaired due to non-availability of spares, change in software and technology development (as the same have become obsolete in market). The

Petitioner has submitted that in view of the said constraints i.e., obsolescence of the laboratory equipment and criticality of the system for plant operations, the Petitioner has no choice but to go for complete up-gradation of the entire system to higher version as recommended by OEM in a phased manner from 2020-21 to 2023-24. It has stated that an estimated additional expenditure of Rs 154 lakh, as per initial offer, spread over the years 2020-21 to 2023-24 is required for up-gradation of Laboratory Instruments.

199. The matter has been examined. The Petitioner has stated that the OEM has declared obsolescence of most spares and that most of the instruments cannot be serviced or repaired due to non-availability of spares, change in software and technology development. The relevant portion of the said recommendation is as under:

> *"This is to confirm that some of the instruments mentioned below from the order cannot be serviced or repaired due to non-availability of spares, change in software and technology development because they became obsolete in market, thus it makes highly impossible to keep them in working condition……..*
>
> *So we recommend you to upgrade the laboratory with new instruments in order to maintain a better performance to minimize downtime*"

200. The Petitioner has also referred to the correspondence made with M/s Orbit Technologies Limited with regard to the non-availability/ obsolescence of some of the items like PH meter, turbidity meter, conductivity meter, LPG gas cylinder &regulator, hot air oven, bomb calorimeter etc., and that the laboratory spares could not be serviced or repaired due to non-availability of spares, change in software and technology development. We, therefore, find merit in the claim of the Petitioner and accordingly allow the projected additional capitalization of Rs.154.03 lakh (Rs.21.94 lakh for 2020-21, Rs.57.08 lakh for 2021-22, Rs.52.90 lakh for 2022-23, Rs.22.11 lakh for 2023-24) for Laboratory Instruments under Regulation 25(2)(c) of the 2019 Tariff Regulations.

Replacement of Battery

201. The Petitioner has claimed projected additional capitalization of Rs.250.00 lakh (Rs.80.00 lakh for 2020-21, Rs.80.00 lakh for 2021-22 and Rs.90.00 lakh for 2022-23) towards Replacement of battery under Regulation 25(2)(a) read with Regulation 25(2)(c) of the 2019 Tariff Regulations along with the corresponding unrecovered depreciation value of the assets. The Petitioner has submitted that in case of system blackout, batteries feed the Direct Current (DC) equipment of the plant and switchyard equipment such as Emergency Oil Pump (EOP), Lube Oil Pump (LOP), Jacking Oil Pump (JOP) and Emergency lighting, thereby ensuring the safe shutdown of the plant and safe operation of the switchyard equipment. The Petitioner has submitted that as per OEM, the serviceable life of these battery sets is 8 to 10 years under normal application. It has also stated that the existing 220 V and 48 V battery banks have been supplied by M/s Exide/ M/s HBL and in view of the obsolescence, as confirmed by OEMs and to avoid criticality of the system for plant operation, it is necessary to replace the existing battery sets with new ones for improving the overall reliability of DC system. The Petitioner has, therefore, proposed to replace these battery sets as they will complete their useful life by 2020-2021 and has accordingly proposed the aforesaid additional expenditure for replacement of these battery banks.

202. The matter has been examined. It is observed that the claim of the Petitioner regarding obsolescence of these batteries has not been duly supported by OEM certificate. It is, however, noticed that OEM in its letters has confirmed the life of these batteries to be around 10-12 years and that the batteries form part of the essential safety system against tripping of the plant. As the useful life of these assets (batteries), which gets completed during the 2019-24 tariff period, are not

commensurate with the useful life of the project, the projected additional capitalization for 'Replacement of Battery' is allowed along with adjustment of de-capitalization and depreciation under Regulation 25(2)(a) of the 2014 Tariff Regulations, subject to truing-up based on actuals.

Up-gradation of Coal Handling Plant Main PLC, Up-gradation of DMP PLC, and Up-gradation of Raw Water PLC

203. The Petitioner has claimed projected additional capitalization of Rs.160.00 lakh (Rs.60.00 lakh for PLC of CHP, Rs.50.00 lakh for PLC of DMP and Rs.50.00 lakh for PLC of Raw water) in 2020-21 for Up-gradation of PLC in terms of Regulation 25(2)(c) of the 2019 Tariff Regulations and has submitted the following:

> **(a) Up-gradation of Coal Handling Plant main PLC**: The Programmable Logic Control ("PLC") system consists of Measurement and Closed Loop/ Open Loop Control system ('CLCS' and 'OLCS'), Data bus system, Operator workstations, Engineer workstation, Software including data diagnostics and data bus system with Control and Communication with the process. The workstations Human Machine Interface (HMI) supplied with PLC system is based on Microsoft Windows XP Operating platform. Microsoft has declared Windows XP as obsolete and has withdrawn the support for all XP based systems including automatic security updates. In the absence of such support from Microsoft one cannot update the critical virus definition files and, thus, makes the system vulnerable for the system security. Hence, the system needs up-gradation to higher version of Windows platform to ensure improved reliability and availability. The OEM in its life cycle report on installed PLC -HMI System at CHP has strongly recommended immediate attention on migration from Windows XP to Windows 10 Professional Operating System, owing to technological obsolescence. Accordingly, it is proposed to incur amount of Rs.0.60 crore in 2020-21.
>
> **(b) Up-gradation of DMP PLC:** The availability of this PLC system is very important for the smooth and normal operation of the generating unit. This system is based on Windows XP operating system and at that time (when the agreement was inked in with M/s BGR Energy) Windows XP operating system was the most popular and reliable Windows platform provided by all leading industrial automation companies for their control system. As Microsoft has withdrawn the support for Windows XP operating system, the Petitioner needs to upgrade the PLC to higher version of Windows. Since spares and services support for the old XP machines are restricted due to component obsolescence,

it is necessary to upgrade the XP based PLC system to higher version of Windows platform. The OEM, in its life cycle report has strongly recommended upgrading the obsolete portion of the system, retaining majority of existing hardware along with panels, etc. Since there is not going to be any major hardware or software modification, the up-gradation work can be carried out in smooth manner in normal planned shutdowns of the plant. It is, therefore, proposed to incur an amount of 0.50 crore in 2020-21 on account of technology obsolescence/non-support by the OEM.

(c) Up-gradation of Raw Water PLC: The workstations (HMI) supplied with PLC system is based on Microsoft Windows XP Operating platform. Microsoft has declared Windows XP as obsolete and has withdrawn the support for all XP based systems including automatic security updates. In the absence of such support from Microsoft, one cannot update the critical virus definition files and, thus, makes the system vulnerable for the system security. Hence, the system needs up-gradation to higher version of Windows platform to ensure improved reliability and availability. HMI systems presently in service at site are quite old and have outlived their service life. Some of these machines are slow in response and hang quite frequently. Spares and services support for the old machines are restricted due to component obsolescence. Workstations presently available in the market are with latest Windows OS and these current machines are not one to one interchangeable with the existing old machines presently in use. The OEM in its life cycle report strongly recommended to up-grade the obsolete portion of the system, retaining majority of existing hardware along with panels, etc. It is, therefore, proposed to incur an amount of Rs.0.50 crore in 2020-21 on account of technology obsolescence/non-support by OEM.

204. The submissions have been considered. It is evident from the submissions of the Petitioner that PLC installed in the Coal Handling Plant, DMP PLC, Raw Water PLC have become obsolete as Microsoft has declared Windows XP as obsolete and had withdrawn its support for all Windows XP based systems. The Petitioner has furnished the OEM recommendations in support of its claim for obsolescence of PLC. In view of this, we allow the total projected additional capitalization of Rs.160.00 lakh in 2020-21 under Regulation 25(2)(c) of 2019 Tariff Regulations.

205. In addition, the Petitioner has also claimed additional capitalization for new schemes like Augmentation of ash handing system, Max DCS version up-gradation (XP) Unit-2, Refurbishment of DM Plant Piping and Tanks, IT Equipment, Re-heater

Modification & MTM installation and Fabrication of expansion bellows, during 2019-20 and 2020-21. In justification of the same, the Petitioner has submitted that these new schemes, could not be completed within the 2014-19 tariff period due to various factors viz. (i) changes in schedule of annual maintenance plan or duration of maintenance plan of units, (ii) limited days of the annual outage and (iii) technical constraints etc. The Petitioner has submitted that such small deviations in capital investment are inevitable and there is nil or insignificant impact on the overall project cost. The Petitioner has further submitted detailed submissions in justification for the additional capitalization claimed for these new schemes during the 2014-19 tariff period. Accordingly, the Petitioner has stated that the capitalization of these schemes has been phased during 2019-20 and 2020-21 and that the same may be allowed under Regulations 25(2)(b) and 25(2)(c) read with Regulation 76 of the 2019 Tariff Regulations.

206. The Respondent, KSEBL has submitted that carry forward of schemes approved for 2014-19 period may not be allowed as there is no provision in the 2019 Tariff Regulations to claim such expenditure for the 2019-24 tariff period.

207. We have examined the matter. The Petitioner has claimed additional capitalization of the aforesaid schemes which are beyond the original scope of work of the project (apparently on the ground of force majeure condition), stating that these schemes have been carried forward from the 2014-19 tariff period on various factors. It has also relied upon the submissions made in respect of these schemes during the 2014-19 tariff period. It is noticed that the claim of the Petitioner for additional capitalization towards 'Augmentation of ash handling system' for Rs.700.13 lakh in 2017-18 and Rs.848.07 lakh in 2018-19 was allowed under Regulation 14(3)(ii) of the 2014 Tariff Regulations as the same was for safety of

environment and based on the directions of JSPCB. Since the additional capital expenditure is for compliance with existing law, we allow the same under Regulation 26(1)(a) of the 2019 Tariff Regulations. As regards the additional capitalization claimed for new scheme viz. Max DCS version up-gradation (XP) Unit-2for Rs.450.00 lakh in 2019-20, it is noticed that the Petitioner had claimed the additional capitalization of Rs.67.52 lakh in 2015-16 and Rs.438.86 lakh 2017-18 mainly on the ground that M/s BHEL had stopped extending its support after mid-2016 and had strongly recommended to upgrade to higher versions. Considering the fact that the Petitioner had incurred the said expenditure under unavoidable circumstances, the additional capital expenditure claimed has been allowed during the years 2015-16 and 2017-18 in this order. Accordingly, we allow the additional capitalization of the said expenditure for Rs.450.00 lakh in 2019-20 under Regulations 25(2)(c) and 25(2)(d) of the 2019 Tariff Regulations, as the same is in continuation of the schemes carried out and claimed during the 2014-19 tariff period.

208. However, in respect of other schemes like Refurbishment of DM Plant Piping and Tanks, IT Equipment, Re-heater Modification & MTM installation and Fabrication of expansion bellows during 2019-20 and 2020-21, it is noticed that the claim of the Petitioner had been disallowed during the 2014-19 tariff period. Also, justification furnished by the Petitioner in support of the claim that it is due to change in law or force majeure are not justifiable. In view of this, the claim of the Petitioner for additional capitalisation of these assets is not allowed.

Projected additional capital expenditure under Regulation 26(1) of the 2019 Tariff Regulations

209. The Petitioner has also claimed projected additional capital expenditure for various assets/ works which are beyond the original scope of work of the project

under sub-clauses (a), (b), (c) and (d) of clause (1) of Regulation 26 of the 2019 Tariff Regulations, which provide for the following:

> "*26. Additional Capitalisation beyond the original scope*
>
> *(1) The capital expenditure, in respect of existing generating station or the transmission system including communication system, incurred or projected to be incurred on the following counts beyond the original scope, may be admitted by the Commission, subject to prudence check:*
>
> *(a) Liabilities to meet award of arbitration or for compliance of order or directions of any statutory authority, or order or decree of any court of law;*
>
> *(b) Change in law or compliance of any existing law;*
>
> *(c) Force Majeure events;*
>
> *(d) Need for higher security and safety of the plant as advised or directed by appropriate Indian Government Instrumentality or statutory authorities responsible for national or internal security;*
>
> *(e) xxxxxx.."*

210. The following projected additional capital expenditure claimed by the Petitioner for the assets/ works under Regulation 26(1)(a) of the 2019 Tariff Regulations for the years 2019-20 and 2020-21 are examined below:

(Rs. in lakh)

Asset/Work	2019-20	2020-21
Implementation of Automatic Generation Control system	80.00	-
Soak-pit for Station Transformer in switchyard.	40.00	-
Up-gradation of ABT for RRAS & SCED	-	75.00

Implementation of Automatic Generation Control system

211. The Petitioner has claimed projected additional capitalization of Rs.80.00 lakh in 2019-20 towards implementation of Automatic Generation Control (AGC) system under Regulation 26(1)(a) of 2019 Tariff Regulations. In justification for the same, the Petitioner has pointed out that the Commission vide its order dated 28.8.2019 in Petition No.319/RC/2018 (NLDC v NTPC & Ors.) regarding Automatic Generation Control (AGC) implementation in India has issued the following directions:

> "*34 (i)All thermal ISGS stations with installed capacity of 200 MW and above and all hydro stations having capacity exceeding 25 MW excluding the Run-of-River Hydro Projects irrespective of size of the generating station and whose tariff is determined or adopted by CERC are directed to install equipment at the unit control rooms for transferring the required data for AGC as per the requirement to be notified by the*

National Load Despatch Centre (NLDC). NLDC shall notify the said requirements within one month of this order"

212. The Petitioner has submitted that pursuant to the aforesaid order dated 28.8.2019, Power System Operation Corporation Limited (POSOCO)/ NLDC vide letter dated 17.9.2019 has notified to the generating stations, the requirements for AGC connecting equipment along with the list of plants identified for monitoring by NLDC, which includes the generating station of the Petitioner. The Petitioner has further submitted that NLDC in its letter, has sought details from the Petitioner regarding the infrastructure for meeting the specified requirements and the arrangements to be completed by the power plants before 31.1.2020, so that the AGC system is put in place before 28.2.2020, in terms of the Commission's order dated 28.8.2019 in Petition No.319/RC/2018. Based on this, the Petitioner has sought the approval of the additional capital expenditure for Rs.80 lakh in 2019-20 as per initial offer (and based on pilot projects implemented in NTPC generating stations) for implementation of AGC in the generating station of the Petitioner, under Regulation 26(1)(a) of the 2019 Tariff Regulations. Since the projected additional capital expenditure claimed by the Petitioner for Rs.80 lakh in 2019-20 is in terms of the directions of NLDC, based on the Commission's order dated 28.10.2019 in Petition No.319/RC/2019, we allow the same under Regulation 26(1)(a) of the 2019 Tariff Regulations.

Soak-pit for Station Transformer in switchyard

213. The Petitioner has claimed projected additional capitalization of Rs.40.00 lakh in 2019-20 towards 'Soak Pit for Station Transformer in switchyard' under Regulation 26(1)(a) of the 2019 Tariff Regulations. The Petitioner has submitted that 'soak pit' proposed for the station transformer in switchyard is for compliance with Regulation 44 of the CEA (Measures relating to Safety and Electric Supply) Regulations, 2010.

The Petitioner has enclosed copy of CEA report dated 5.6.2018 and has submitted that since there is presently no such arrangement for Station Transformers in the generating station of the Petitioner, the Regional Inspectoral organization of the CEA, had noticed the deficiency (in sl. no. 5 of the report dated 5.6.2018) and has directed the Petitioner for compliance with the same. Therefore, in order to comply with the existing regulations of CEA, the Petitioner has projected additional capital expenditure of Rs.40 lakh in 2019-20 for Soak Pit for station transformer in switchyard under Regulations 26(1)(a) and 26(1)(b) of the 2019 Tariff Regulations.

214. The matter has been examined. Regulation 44 of the CEA (Measures relating to Safety and Electric Supply) Regulations, 2010 mandates the following:

> *"Regulation 44: Use of electricity at voltage exceeding 650 V. Provisions shall be made for suitable oil soak pit and where use of more than 9000 litres of oil in any one oil tank, receptacle or chamber is involved, provision shall be made for the draining away or removal of any oil which may leak or escape from the tank, receptacle or chamber containing the same."*

215. The Regulations of CEA mandating suitable soak oil pit for station transformer was notified during the year 2010, which is much before COD of the generating station (in 2012) and the deficiency has been pointed out by CEA in its report dated 5.6.2018. Therefore, the Petitioner should have complied with requirements of CEA Regulations at the time of COD of the generating station. However, since the claim of the Petitioner is towards compliance with existing law, we allow the projected additional capitalization for Rs.40 lakh in 2019-20 for the said asset/ work. At the time of truing-up, the Petitioner shall submit reasons for the delay/ deferment of the work.

Up-gradation of ABT system for RRAS & SCED

216. The Petitioner has claimed projected additional capitalization of Rs.75 lakh in 2020-21 for up-gradation of ABT system for RRAS & SCED under Regulation

26(1)(a) of 2019 Tariff Regulations. In justification of the same, the Petitioner has submitted that it has an online system for monitoring and controlling schedules, as advised by Eastern Region Load Despatch Centre (ERLDC) which is named as Availability Based Tariff (ABT) system. It has stated that the core of ABT System is energy meters, which are of L&T make and the software was developed by M/s CMS computer Ltd. about 8 years ago. The Petitioner has pointed out that with the implementation of Reserve Regulation and Ancillary Services (RRAS) and Security Constrained Economic Dispatch (SCED), the schedule is revised every 15 minute time-block as compared to the earlier revision after 4 time-blocks. It has stated that all revision of schedule has to be updated in the server manually and the same is then reflected in the display screen for necessary action by the operation engineers. The Petitioner has stated that with the implementation of RRAS and SCED, it has become difficult for it to maintain proper manual updating of scheduled generation in ABT system to re-align with ERLDC schedule, as the cushion time for manual entry is no more available. The Petitioner has submitted that the Commission in its order dated 16.7.2018 in Petition No 7/SM/2018, has endorsed the 5-minute scheduling, metering, accounting and settlements and has also implemented the same on a pilot basis and has also recommended that all future procurements of energy meter should have recording at 5-minute interval. In this regard, the Petitioner has stated that at present L&T meters in the generating station of the Petitioner do not have registers to capture the 5-minute data and, accordingly, it has to be replaced with new meters, in which block duration is programmable and can be adjusted from 15 minutes to 5 minutes, to be future ready and compliant with the 5-minute data requirements as may be required in near future. Accordingly, the Petitioner has projected additional capitalization of Rs 75 lakh in 2020-21, as per initial offer, in

accordance with the observations of the Commission in its order dated 16.7.2018 in Petition No. 7/SM/2018 under Regulation 26(1)(a) of the 2019 Tariff Regulations.

217. The matter has been considered. Up-gradation of the existing ABT system for RRAS & SCED is required to comply with the changing scenario, to update the revised schedules from ERLDC. As the requirement for up-gradation of the existing ABT system for RRAS and SCED is pursuant to the Commission's order dated 16.7.2018 in Petition No 7/SM/2018, the claim of the Petitioner for projected additional capitalization of Rs.75 lakh in 2020-21 is allowed under Regulation 26(1)(a) of the 2019 Tariff Regulations.

Facility creation for workmen (Rest Room, Toilet & Drinking water point), Drivers rest room, Drinking water facility and workers pathway

218. The Petitioner has claimed projected additional capitalization of Rs.19.77 lakh in 2019-20 for Drinking water facility, Rs.5.00 lakh in 2020-21 for Drivers rest room, Rs.150.00 lakh in 2020-21 for Workers pathway and Rs.150.00 lakh (Rs.37.50 lakh each from 2020-21 to 2023-24) for Facility creation for Workmen (Rest Room, Toilet & Drinking water point) under Regulation 26(1)(b) of the 2019 Tariff Regulations. In justification of the same, the Petitioner has submitted the following:

a) **Facility creation for workmen (Rest room, Toilet & Drinking water point):** As FGD and Railway system is envisaged, commensurate increase in work force is expected and the existing facilities might fall short or might be far from the construction place as per Factories Act. So, in order to ensure hygienic and safe environment for workers, more Rest rooms, Toilets and drinking water points are needed. An estimated expenditure of Rs.150 lakh as per initial offer, (Rs.37.50 lakh each spread over the years 2020-21 to 2023-24) is proposed to be incurred for development of such facilities.

b) **Workers Pathway:** For protection from heat in summer and rain during monsoon season for workers commuting from Gate house to workplace with distance ranging from 2-5 kms, two sitting sheds between Raahi bridge and Aahar-3 (CHP) are needed. Also, long sheds between Gate house-2 to BTG area and between material gate to technical building parking area are required. This would ensure proper working environment for workers. An estimated

expenditure of Rs.150 lakh is initially proposed to be incurred in 2020-21 for development of such facilities. The above requirements are for compliance with the Section 18, Section 19 and Section 47 of the Factories Act, 1948, which mandate to provide drinking water facilities, toilets, shelters, rest rooms and lunchrooms in a factory.

219. The Petitioner has referred to Section 18, Section 19 and Section 47 of the Factories Act, 1948, which mandate to provide drinking water facilities, toilets, shelters, rest rooms and lunchrooms in a factory and has claimed the projected additional capitalization of these assets/ works under Regulation 26(1)(b) of the 2019 Tariff Regulations. In our view, the additional expenditure claimed by the Petitioner is in the nature of revenue expenditure and the same can be met from the O&M expenses allowed to the generating station under the 2019 Tariff Regulations. Accordingly, the projected additional capital expenditure of Rs.19.77 lakh in 2019-20 for Drinking water facility, Rs.5.00 lakh in 2020-21 for Drivers rest room, Rs.150.00 lakh during 2020-21 for Workers pathway and Rs.150.00 lakh (Rs.37.50 lakh each for the years 2020-21 to 2023-24) for Facility creation for workmen (Rest room, Toilet & Drinking water point) is not allowed.

220. The Petitioner has also claimed projected additional capitalization for various assets/ works like BCN 7 (Yard conveyor) modification, Chute Interconnection in 4A to 6B & 4B to 6A (Rs.5 lakh in 2021-22), Common C.W. Pump for Units-1&2 (Rs.300 lakh in 2021-22), Economiser Coil Repairing Bay with Shed (Rs.600 lakh in 2020-21), Installation of Suspended Magnet (Rs.52 lakh in 2019-20), Workshop for Electrical Maintenance Department (EMD) (Rs.5 lakh in 2020-21) and certain Minor assets, under Regulation 26(1)(c) (*Force Majeure events*) of the 2019 Tariff Regulations and has submitted the following:

a) **BCN 7 (Yard Conveyor) Modification:** The Petitioner has submitted that it has observed during stacking/reclaiming from mid-zone 3 and zone 4, M2 motor trips and, thereafter, it is required to be manually unloaded before it can

be restarted, hampering the operation of Coal Handling Plant (CHP). The root cause analysis was carried out by in-house diagnostic team and it was found that inadequate tension in the belt, as the primary cause for such tripping and it was recommended to add extra counterweight to overcome the problem and structural changes to accommodate the extra counterweight. The Petitioner seeks liberty to allow the Petitioner to approach the Commission in case the capital expenditure becomes unavoidable for reliable operation of the plant.

b) **Chute Interconnection in 4A to 6B & 4B to 6A:** Normally CHP is equipped with two parallel conveyors with interconnectivity for ensuring redundancy. However, as per existing configuration, the belt conveyors, just after the crushers, have no cross interconnectivity between them leading to no interchange of coal flow from A stream to B Stream or vice versa. Therefore, presently the system reliability depends upon 3 streams, i.e., (BCN 4A/B, 6A/B & 8A/B) which are in series. It was envisaged to have 2nd reversible stacker-cum-reclaimer in the second phase of the project along the BCN 5- the Yard conveyor and discharge chutes extending up to BCN 6A/B. Since, Phase 2 of the project looks uncertain; it is now proposed to construct a new interconnecting chutes between BCN 4A/B and 6A/B to improve the overall BCN-4A/6A & 4B/6B route availability from 65% (as per 2019 data) to 85% while stacking. Accordingly, the expenditure of Rs.5 lakh is projected for year 2021-22.

c) **Common C.W. Pump for Units-1&2:** Each unit of the generating station is having three numbers of Cooling Water (CW) pumps with all of them in running configuration without any standby. So, the non-availability of CW Pump has direct consequence on the reliability of the generation unit. This standby pump will also ensure regular preventive maintenance of CW Pumps and, hence, unit reliability will increase. Accordingly, the additional capitalization projected for the standby pump is Rs.300 lakh for 2021-22.

d) **Economiser Coil Repairing Bay with Shed:** Economiser coils suffer maximum erosion loss of tubes due to coarse high ash content in coal ranging from 40% to 46%. Because of heavy erosion, the units have suffered 16 numbers of Boiler tube leakages at economizer section since the COD of both the units. During shutdowns, these coils need to be taken out from the boiler for safe and careful inspection and repair. Thus, to facilitate safe and thorough inspection of the economizer coil, a maintenance bed is required for positioning of the damaged coils for inspection, repair, testing and proper stacking in the bay, for future use, in successive overhauls. The projected additional capital expenditure is Rs.600 lakh to be incurred in 2020-21, for construction of above facility.

e) **Installation of Suspended Magnet:** As part of the CHP, there are Inline Magnetic Separators (ILMS) (1 number on each belt) installed at the discharge

point of conveyor (BCN-3A/3B) which discharges coal to the crusher (Ring Granulators). In order to control the frequent tripping of conveyor due to MDT sensing both types of metals and to eliminate the possibility of metal pieces entering the crusher, it is required to install a trolley mounted suspended electromagnet prior to the MDT. Therefore, the projected additional capital expenditure to be incurred is Rs.52 lakh in 2019-20, for the procurement and installation of suspended magnet.

f) **Workshop for Electrical Maintenance Department (EMD):** Due to space constraint at the present common workshop, there is no fixed allocated space for maintenance activities of electrical department. The availability of centralized space shall facilitate the overhauling of all types of High Tension & Low Tension motors, 400 kV breakers and other electrical equipment's at single location, which would help the Petitioner to improve the quality of work, ensure safe environment for workers and also to manage resources, ultimately leading to lower downtime. In view of the above, a workshop for EMD is proposed to be set up at a projected additional capital expenditure of Rs.5 lakh in 2020-21.

g) **Minor assets like Covered parking block at township, Industrial kitchen setup at MA-2, Modernization of gym, Rooftop cafeteria and Community hall, Six seater dining table for workers, Electric vehicle (cart) for Staff visitors movement:** Many minor items highlighted below have life cycle of 7-8 years and these items need recurrent replacement. The provision of compensation allowance which was included in the 2014 Tariff Regulations to compensate for minor asset addition, has now been removed in the 2019 Tariff Regulations and, thus, there is no specific provision to permit the expenses for minor asset additions.

221. It is observed that the projected additional capital expenditure claimed by the Petitioner in respect of these assets/ works [(a) to (g) above], mainly pertain to addition of new equipment to the existing set-up either as a standby or for incorporation of new facilities. Though the Petitioner has claimed additional capitalization of these works/ assets based on 'force majeure' conditions, it has not established the presence of any such force majeure events to consider the claims made as above. Since no case for force majeure events have been made out by the Petitioner, the claim for assets/ works like BCN 7 (Yard conveyor) modification, Chute Interconnection in 4A to 6B & 4B to 6A, Common C.W. Pump for Units-1&2,

Economiser Coil Repairing Bay with Shed, Installation of Suspended Magnet, Workshop for Electrical Maintenance Department (EMD) and certain Minor assets, claimed under Regulation 26(1)(c) of the 2019 Tariff Regulations is not allowed. Also, the prayer of the Petitioner to grant liberty to approach the Commission in case the additional capital expenditure for BCN 7 (Yard conveyor) modification becomes unavoidable is rejected.

Augmentation of store and Coal pit run-off mechanised Drainage System

222. The Petitioner has claimed projected additional capitalization of Rs.329.26 lakh for Augmentation of store and Rs.399.53 lakh for 'Coal Pit Run-off mechanized drainage system' in 2019-20 under Regulation 26(1)(c) of the 2019 Tariff Regulations. The Petitioner has submitted the following as regards augmentation of store:

> *"These are the 'carry forward schemes beyond the original scope of work'. Few schemes that were envisaged for the control period 2014-19 could not be completed within the control period due to various reasons beyond the control of the Petitioner. The capitalization towards these schemes got carried forward to control period 2019-24. The relevant regulations under which the capitalization for such schemes are Regulation 26(1)(c) read with Regulation 3(25) and Regulation 76 of the 2019 Tariff Regulations. The above mentioned items are claimed under specific provisions of the 2019 Tariff Regulations and justifications are provided in the truing-up section. In view of above, it is prayed that the Commission may approve the proposed additional capitalization for control period 2019-24 as proposed."*

223. The Petitioner has not demonstrated the existence of any force majeure condition for justifying the additional capitalization claimed in respect of this augmentation of store, which has been carried forward from the 2014-19 tariff period. It is pertinent to mention that the claim of the Petitioner for additional capitalization of this asset/ work has not been allowed under 'force majeure' in the 2014-19 tariff period. In view of this, the projected additional capital expenditure of Rs.329.26 lakh claimed for 'Augmentation of store' is not allowed.

224. As regards the claim for Coal Pit run-off mechanized drainage system during 2014-19 tariff period, the same has been allowed in paragraph 94 of this order.

225. In view of this decision, the claim of the Petitioner for projected additional capitalization of Rs.399.63 lakh in 2019-20 is allowed under Regulation 26(1)(c) of the 2019 Tariff Regulations.

Boundary wall under pass area

226. The Petitioner has claimed projected additional capitalization of Rs.100.00 lakh in 2020-21 towards "Boundary wall under pass area' under Regulation 26(1)(d) of the 2019 Tariff Regulations and has stated the following:

> *"The Intelligence Bureau (IB) conducted a security inspection at plant premises in November 2018 and submitted a report on the same to MPL. The IB report recommended that barbed wire fence on both sides of the village road passing through the middle of plant may be replaced with masonry perimeter wall on both sides with provision of concertina coil overhang. Also, concertina coil overhang may be provided all over the perimeter wall. This direction ensures safety of plant from danger of intrusion. Accordingly, additional capitalization has been proposed and the same falls within the scope of Regulation 26 (1)(d) of the 2019 Tariff Regulations. The estimated cost of Rs. 100 lakh for the work is proposed to be incurred in 2020-21 and the Commission may kindly approve the same."*

227. The Petitioner has enclosed the recommendations of IB in support of its claim for additional capital expenditure towards 'Boundary wall under pass area' in 2020-21. Since the recommendations of IB for higher security and safety of the plant, is statutory in nature, we allow the projected additional capital expenditure claimed by the Petitioner for Rs.100.00 lakh for Boundary wall for pass area in 2020-21, under Regulation 26(1)(d) of the 2019 Tariff Regulations.

Automation of Boom Barrier

228. The Petitioner has claimed projected additional capitalization of Rs.20.00 lakh in 2020-21 towards 'Automation of Boom Barrier' under Regulation 26(1)(d) of the 2019 Tariff Regulations and has submitted the following:

"*The automatic boom barrier would offer security at the exit and the entry points of the plant. Automatic barrier can be used to successfully control pedestrian and vehicle traffic. It can be used to achieve better security. In order to ensure higher security and safety of the plant 'boom barrier' is required. The cost of the proposal is Rs. 20 lakh to be incurred in 2020-21 and the Commission may kindly approve the same."*

229. Regulation 26(1)(d) of the 2019 Tariff Regulations provides for capitalization of additional expenditure (projected or incurred) required for higher security and safety of the plant as advised or directed by appropriate Indian Government Instrumentality or statutory authorities responsible for national or internal security. The Petitioner, in this case, has not established through documentary evidence that the additional capital expenditure is required to be incurred based on the advice or direction of any Indian Government Instrumentality or statutory authorities. In the absence of any justification, the claim of the Petitioner for additional capitalization of Rs.20.00 lakh in 2020-21 is not allowed.

CCTV Installation

230. The Petitioner has claimed projected additional capitalization of Rs.550.00 lakh (Rs.200.00 lakh in 2020-21 Rs.200.00 lakh in 2021-22 Rs.150.00 lakh in 2022-23) for installation of CCTV all around the generating station, under Regulation 26(1)(d) of the 2019 Tariff Regulations and has submitted as under:

"The surrounding areas of MPL plant have strongholds of CPI (maoist) cadre. Also, there is always possibility of damage to the MPL from disgruntled subverted outsourced workers/employees during strikes/agitation. There are several incidents of such disturbances in the past. So, in order to ensure safety of plant a proper monitoring of plant premises is needed. CCTV installation all over the plant may help averting any unwanted incidents and also activities of people in and around plant can easily be monitored. Accordingly, additional capitalization has been proposed for an estimated cost of Rs.550 lakh during the period 2020-23 in a phased manner and the Commission may kindly approve the same."

231. The Petitioner has not established through documentary evidence that the additional capital expenditure is required to be incurred based on the advice or direction of any Indian Government Instrumentality or statutory authorities. In the

absence of any justification, the claim of the Petitioner for additional capitalization of Rs.550.00 lakh during the period 2020-23 for this asset/ work is not allowed.

Economiser platform for both boilers

232. The Petitioner has claimed projected additional capitalization of Rs.350.00 lakh in 2020-21 towards 'Economiser platform for both boilers' under Regulation 26(1)(d) of the 2019 Tariff Regulations and has submitted as under:

> *"During annual outage most of the maintenance works are undertaken in the economizer and LTSH region due to maximum erosion of coils. Due to space and design constraints through inspection, lifting of multiple coils and carrying out repair activity becomes difficult. Moreover, due to multiple activities being carried out simultaneously, it becomes unsafe for the workers and employees. In view of above constraint and safety of the workmen, it is proposed to fabricate permanent structure to create additional space for the coil removal, inspection, immediate repair and re-placement of coil in the boiler. Additional space shall enhance safety to the workplace and thereby avoiding any unwanted eventuality. In addition, it will reduce downtime for peak, off-peak availability. This expenditure is admissible in terms of Regulations 26(1)(d) of the 2019 Tariff Regulations and the cost of the work for Rs.350 lakh is proposed to be incurred in 2020-21 and the Commission may kindly approve the same."*

233. The Petitioner has submitted that the additional capital expenditure is required for better safety/ security of plant based on the advice or direction of any Indian Government Instrumentality or statutory authorities. In view of the above, the projected additional capitalization claimed for Rs.350.00 lakh in 2020-21 for the asset/ work is allowed. The Petitioner is however directed to furnish at the time of truing up of tariff, the relevant advice or direction of any Indian Government Instrumentality or statutory authority to substantiate the said claim.

Mini Fire Tender

234. The Petitioner has claimed projected additional capitalization of Rs.25.00 lakh in 2020-21 for Mini Fire Tender under Regulation 26(1)(d) of the 2019 Tariff Regulations. Reason as submitted by the Petitioner is as under:

> *"The fire fighting system was installed as per IS 3034 and Tariff Advisory Committee TAC guidelines at MPL. During the forest fire (Both sides of boundary wall of plant) i.e.*

grass fire inside and outside of plant, it is very difficult to extinguish with heavy Fire Tender due to narrow approach. The water intake is about 1.5 km away from the main plant and the passage / bridge was made for Light Motor Vehicle LMV) only. To cater to fire in that area an LMV mounted fire tender / Mini fire tender is required. It is submitted that MPL plant is stretched over a vast area. There are many spots where large fire tender finds it difficult to reach. Therefore, a mini fire tender is required for places where large fire tender is unable to reach during emergency. Also, this is compliance to IS 3034 in respect to safety of the plants and its workers. The estimated cost of Rs.25 lakh is to be incurred in 2019-20 and the said expenditure fall within the scope and purview of Regulation 26(1)(d) of the 2019 Tariff Regulations."

235. The Petitioner has not established through documentary evidence that the additional capital expenditure is required to be incurred based on the advice or direction of any Indian Government Instrumentality or statutory authorities. However, considering the fact that the asset is required for the safe operation of the plant, we allow the projected additional capital expenditure claimed. The Petitioner is directed to furnish, at the time of truing up of tariff, the relevant advice or direction of any Indian Government Instrumentality or statutory authority to substantiate the said claim.

Road along Boundary wall

236. The Petitioner has claimed projected additional capitalization of Rs.450.00 lakh (Rs.150.00 lakh in 2020-21, Rs.150.00 lakh in 2021-22, Rs.100.00 lakh in 2022-23 and Rs.50.00 lakh in 2023-24) for 'Road along Boundary wall' under Regulation 26(1)(d) of the 2019 Tariff Regulations and has submitted as under:

"The Petitioner has submitted that Intelligence Bureau (IB) conducted security inspection at plant premises in November 2018. IB submitted its security inspection report to MPL giving some instructions for ensuring safety and security of the plant. IB perceived threat from the surrounding areas since it is having stronghold of CPI (Maoist) cadre. Further, Gate blocking/agitations by the Plant Affected People are very common features. IB in its report observed that the patrolling track along the perimeter wall is not metaled. It is away from the perimeter at several points and it is not continuous. The continuity of motorable patrolling track is essential for reaching of security personnel and fire tenders at the remotest areas. It recommended laying of metaled patrolling track all along the perimeter for seamless movement of security personnel and fire tenders. It is needed for higher security and safety of the plant as directed by Intelligence Bureau responsible for national or internal security. The copy of inspection report by IB is already enclosed. The estimated cost of Rs.450 lakh and is proposed to be incurred during the period 2021-24 covering the periphery road of 18

km. The said expenditure falls within the scope and purview of Regulation 26(1)(d) of the 2019 Tariff Regulations and hence the same may be allowed."

237. The Petitioner has enclosed the recommendations of IB in support of its claim for capitalization of the expenditure towards Road along Boundary wall during the period 2020-24. Since the recommendations of IB for higher security and safety of the plant, is statutory in nature, we allow the projected additional capital expenditure claimed by the Petitioner for Rs.450.00 lakh during 2020-24 for Road along Boundary wall under Regulation 26(1)(d) of the 2019 Tariff Regulations.

Gate House Near JNT, E-security system, Construction of high-rise safety platform and walkways

238. The Petitioner has claimed projected additional capitalization of Rs.120.70 lakh in 2019-20 for Gate house near JNT, Rs.248.99 lakh (Rs.148.99 lakh in 2019-20 and Rs.100.00 lakh in 2020-21) for E-security system and Rs.300.00 lakh in 2019-20 for Construction of high-rise safety platform and walkways under Regulation 26(1)(d) of the 2019 Tariff Regulations and has submitted the following:

"These are the 'carry forward schemes beyond the original scope of work'. It is submitted that few schemes that were envisaged for the control period 2014-19 could not be completed within the control period due to various reasons beyond the control of the Petitioner. The capitalization towards these schemes got carried forward to control period 2019-24. The relevant regulations under which the capitalization for such schemes are Regulation 26(1)(c) read with Regulation 3(25) and Regulation 76 of the 2019 Tariff Regulations. The above mentioned items are claimed under specific provisions of the 2019 Tariff Regulations and justifications are provided in the truing-up section. In view of above, it is prayed that the Commission may approve the proposed additional capitalization for control period 2019-24 as proposed."

239. The Petitioner has not established through documentary evidence that the additional capital expenditure is required to be incurred based on the advice or direction of any Indian Government Instrumentality or statutory authorities. In the absence of any justification, the claim of the Petitioner for additional capitalization of Rs.120.70 lakh in 2019-20 for Gate house near JNT, Rs.248.99 lakh (Rs.148.99 lakh

in 2019-20 and Rs.100.00 lakh in 2020-21) for E-security system and Rs.300.00 lakh in 2019-20 for Construction of high-rise safety platform and walkways is not allowed.

De-capitalization

240. The projected de-capitalization claimed by the Petitioner in Form-1(i) is as under:

(Rs. in lakh)

2019-20	2020-21	2021-22	2022-23	2023-24
1138.34	2927.46	2110.64	1119.45	727.30

241. Based on the above discussion, the projected additional capitalization and de-capitalization allowed for the purpose of tariff is summarized as under:

(Rs. in lakh)

Sl. No.	Head of work / Equipment	2019-20	2020-21	2021-22	2022-23	2023-24
1	Cost of Land & Site	3881.64	0.00	0.00	0.00	0.00
2	GCW- Boundary wall	160.00	0.00	0.00	0.00	0.00

Discharge of liabilities

242. The Petitioner has not claimed any discharge of liabilities during the 2019-24 tariff period.

Normative IDC

243. The Petitioner has claimed following amounts of normative IDC on excessive equity and on actual loan:

(Rs. in lakh)

	2019-20	2020-21	2021-22	2022-23	2023-24
Normative IDC on Excess equity	735.90	446.12	337.89	185.90	158.15
Normative IDC on actual loan	79.84	39.84	31.94	0.32	0.10

244. In terms of the discussions and decision in paragraph 105 to paragraph 112 above, the normative IDC allowed for the 2019-24 tariff period are as under:

(Rs. in lakh)

2019-20	2020-21	2021-22	2022-23	2023-24
98.26	1093.21	22.11	15.27	12.65

Capital Cost allowed for the 2019-24 tariff period

245. Based on the opening capital cost and the projected additional capital expenditure allowed in the preceding paragraphs, the capital cost allowed for the 2019-24 tariff period is as below:

(Rs. in lakh)

	2019-20	2020-21	2021-22	2022-23	2023-24
Opening Capital Cost	478969.24	484317.13	553551.06	552899.60	552788.32
Net additional capital expenditure allowed within original scope of work of the project	3353.30	66290.72	-1523.46	-526.55	-255.19

Net additional capital expenditure allowed beyond the original scope of work of the project	1896.33	1850.00	850.00	400.00	350.00
Normative IDC allowed	98.26	1093.21	22.11	15.27	12.65
Total net additional capital expenditure allowed	5347.89	69233.93	(-) 651.45	(-) 111.28	107.46
Capital Cost as on 31st March of the year	484317.13	553551.06	552899.60	552788.32	552895.78

246. Regulation 18 of the 2019 Tariff Regulations provides as under:

"18. Debt-Equity Ratio: (1) For new projects, the debt-equity ratio of 70:30 as on date of commercial operation shall be considered. If the equity actually deployed is more than 30% of the capital cost, equity in excess of 30% shall be treated as normative loan: Provided that:

i. where equity actually deployed is less than 30% of the capital cost, actual equity shall be considered for determination of tariff:
ii. the equity invested in foreign currency shall be designated in Indian rupees on the date of each investment:
iii. any grant obtained for the execution of the project shall not be considered as a part of capital structure for the purpose of debt: equity ratio."

247. Gross loan and equity amounting to ₹335278.47 lakh and ₹143690.77 lakh respectively as on 31.3.2019 as determined vide para 122 and 125 above, has been considered as the gross loan and equity as on 1.4.2019. Based on the above quoted Regulation, the debt-equity ratio of 70:30 has been applied on year wise allowed additional capital expenditure for arriving at the additions to loan and equity during each year of the tariff period 2019-24. The debt-equity ratio considered for the purpose of computation of tariff for 2019-24 tariff period is as follows:

(Rs in lakh)

	Capital cost as on 1.4.2019	**(in %)**	**Additional Capitalization during 2019-24**	**(%)**	**Capital cost as on 31.3.2024**	**(%)**
Debt	335278.47	70.00	51748.58	70.00	387027.05	70.00
Equity	143690.77	30.00	22177.96	30.00	165868.73	30.00
Total	**478969.24**	**100.00**	**73926.54**	**100.00**	**552895.78**	**100.00**

Return on Equity

248. Regulation 30 of 2019 Tariff Regulations provide as below:

"30. Return on Equity:

(1) Return on equity shall be computed in rupee terms, on the equity base determined in accordance with Regulation 18 of these regulations.

(2) Return on equity shall be computed at the base rate of 15.50% for thermal generating station, transmission system including communication system and run-of-river hydro generating station, and at the base rate of 16.50% for the storage type hydro generating stations including pumped storage hydro generating stations and run-of-river generating station with pondage:

Provided that return on equity in respect of additional capitalization after cutoff date beyond the original scope, excluding additional capitalization on account of emission control system, shall be computed at the weighted average rate of interest on actual loan portfolio of the generating station or the transmission system or in the absence of actual loan portfolio of the generating station or the transmission system, the weighted average rate of interest of the generating company or the transmission licensee, as the case may be, as a whole shall be considered, subject to ceiling of 14%;

Provided further that:

i. In case of a new project, the rate of return on equity shall be reduced by 1.00% for such period as may be decided by the Commission, if the generating station or transmission system is found to be declared under commercial operation without commissioning of any of the Restricted Governor Mode Operation (RGMO) or Free Governor Mode Operation (FGMO), data telemetry, communication system up to load dispatch centre or protection system based on the report submitted by the respective RLDC;

ii. *in case of existing generating station, as and when any of the 61 requirements under (i) above of this Regulation are found lacking based on the report submitted by the concerned RLDC, rate of return on equity shall be reduced by 1.00% for the period for which the deficiency continues*;

iii. in case of a thermal generating station, with effect from 1.4.2020:

a) rate of return on equity shall be reduced by 0.25% in case of failure to achieve the ramp rate of 1% per minute;

b) an additional rate of return on equity of 0.25% shall be allowed for every incremental ramp rate of 1% per minute achieved over and above the ramp rate of 1% per minute, subject to ceiling of additional rate of return on equity of 1.00%: Provided that the detailed guidelines in this regard shall be issued by National Load Dispatch Centre by 30.6.2019.

(3) The return on equity in respect of additional capitalization on account of emission control system shall be computed at the base rate of one year marginal cost of lending rate (MCLR) of the State Bank of India as on 1st April of the year in which the date of operation (ODe) occurs plus 350 basis point, subject to ceiling of 14%.

249. Regulation 31 of the 2019 Tariff Regulations provides as under:

"*31. Tax on Return on Equity*

1. The base rate of return on equity as allowed by the Commission under Regulation 30 of these regulations shall be grossed up with the effective tax rate of the respective financial year. For this purpose, the effective tax rate shall be considered on the basis of actual tax paid in respect of the financial year in line with the provisions of the relevant Finance Acts by the concerned generating company or the transmission licensee, as the case may be. The actual tax paid on income from

other businesses including deferred tax liability (i.e. income from business other than business of generation or transmission, as the case may be) shall be excluded for the calculation of effective tax rate.

(2) Rate of return on equity shall be rounded off to three decimal places and shall be computed as per the formula given below: Rate of pre-tax return on equity = Base rate / (1-t) Where "t" is the effective tax rate in accordance with clause (1) of this Regulation and shall be calculated at the beginning of every financial year based on the estimated profit and tax to be paid estimated in line with the provisions of the relevant Finance Act applicable for that financial year to the company on pro-rata basis by excluding the income of non-generation or non-transmission business, as the case may be, and the corresponding tax thereon. In case of generating company or transmission licensee paying Minimum Alternate Tax (MAT), "t" shall be considered as MAT rate including surcharge and cess. Illustration- (i) In case of a generating company or a transmission licensee paying Minimum Alternate Tax (MAT) @ 21.55% including surcharge and cess:

Rate of return on equity = 15.50/(1-0.2155) = 19.758% (ii) In case of a generating company or a transmission licensee paying normal corporate tax including surcharge and cess:

(a) Estimated Gross Income from generation or transmission business for FY 2019-20 is Rs 1,000 crore;

(b) Estimated Advance Tax for the year on above is Rs 240 crore;

(c) Effective Tax Rate for the year 2019-20 = Rs 240 crore/Rs 1000 crore = 24%; (d) Rate of return on equity = 15.50/ (1-0.24) = 20.395%. (3) The generating company or the transmission licensee, as the case may be, shall true up the grossed up rate of return on equity at the end of every financial year based on actual tax paid together with any additional tax demand including interest thereon, duly adjusted for any refund of tax including interest received from the income tax authorities pertaining to the tariff period 2019-24 on actual gross income of any financial year. However, penalty, if any, arising on account of delay in deposit or short deposit of tax amount shall not be claimed by the generating company or the transmission licensee, as the case may be. Any under-recovery or over-recovery of grossed up rate on return on equity after truing up, shall be recovered or refunded to beneficiaries or the long term customers, as the case may be, on year to year basis.

250. For calculation of ROE in respect of works within the original scope of work but beyond cut-off date, the Petitioner has grossed up the base rate with MAT rate of 2019-20 (17.472%) for the entire 2019-24 tariff period. The Petitioner has also grossed up the weighted average rate of interest with the same MAT rate (17.472%) for calculation of ROE in respect of the additional capitalization beyond the original scope of work.

251. As regards computation of ROE, Regulation 31 of the 2019 Tariff Regulations, as quoted above, specifically provides for grossing up of the base rate allowed under

Regulation 30 of the 2019 Tariff Regulations. The base rate for return on equity (i.e. for works within the original scope of the project) for the generating station is 15.50% as per Regulation 30 of the 2019 Tariff Regulations. The same has been allowed for grossing up with the MAT rate of 17.472% for all the years of the 2019-24 tariff period, subject to truing up.

252. Regulation 31 of the 2019 Tariff Regulations provides for grossing up of the base rate and does not provide for grossing up of weighted average rate of interest to be used for ROE for additions beyond the original scope of the project. Accordingly, in line with Regulation 31 of the 2019 Tariff Regulations, ROE has been allowed as under:

A. Return on Equity allowed at base rate for works within the original scope of project:

(Rs. in lakh)

	2019-20	**2020-21**	**2021-22**	**2022-23**	**2023-24**
Gross Notional Equity	143690.77	144715.59	164921.86	164479.80	164340.90
Addition due to additional capitalisation	1024.82	20206.27	-442.07	-138.90	-86.77
Closing Equity	144715.59	164921.86	164479.80	164340.90	164254.13
Average Equity	144203.18	154818.73	164700.83	164410.35	164297.51
Return on Equity (Base Rate)	15.500%	15.500%	15.500%	15.500%	15.500%
Tax rate for the year (MAT of 2019-20 applied for the period)	17.472%	17.472%	17.472%	17.472%	17.472%
Rate of Return on Equity	18.782%	18.782%	18.782%	18.782%	18.782%
A: Return on Equity allowed at base rate	**27083.53**	**29077.29**	**30933.29**	**30878.74**	**30857.54**

B. Return on Equity allowed at Weighted Average Rate of Interest (WARI) for additional capitalisation beyond the original scope of project:

(Rs. in lakh)

	2019-20	**2020-21**	**2021-22**	**2022-23**	**2023-24**
Net Opening Equity	0.00	579.55	1143.45	1390.08	1495.60
Add: Increase in equity due to addition during the year / period	579.55	563.90	246.63	105.52	119.01
Net closing Equity	579.55	1143.45	1390.08	1495.60	1614.61
Average Equity	289.77	861.50	1266.77	1442.84	1555.10
WARI	8.79%	8.79%	8.79%	8.79%	8.79%
B: Return on Equity allowed at WARI	25.47	75.73	111.35	126.83	136.69

253. Thus, the total ROE allowed for the generating station is as under:

(Rs. in lakh)

	2019-20	**2020-21**	**2021-22**	**2022-23**	**2023-24**
A: Return on Equity allowed at base rate	27083.53	29077.29	30933.29	30878.74	30857.54
B: Return on Equity allowed at WARI	25.47	75.73	111.35	126.83	136.69
Total Return on Equity allowed (A+B)	**27109.00**	**29153.01**	**31044.64**	**31005.56**	**30994.24**

Interest on Loan

254. Regulation 32 of the 2019 Tariff Regulations provides as under:

> ***"**32. Interest on loan capital:*
> *(1) The loans arrived at in the manner indicated in Regulation 18 of these regulations shall be considered as gross normative loan for calculation of interest on loan.*
> *(2) The normative loan outstanding as on 1.4.2019 shall be worked out by deducting the cumulative repayment as admitted by the Commission up to 31.3.2019 from the gross normative loan.*
>
> *(3) The repayment for each of the year of the tariff period 2019-24 shall be deemed to be equal to the depreciation allowed for the corresponding year/period. In case of de-capitalization of assets, the repayment shall be adjusted by taking into account cumulative repayment on a pro rata basis and the adjustment should not exceed cumulative depreciation recovered upto the date of de-capitalisation of such asset.*
>
> *(4) Notwithstanding any moratorium period availed by the generating company or the transmission licensee, as the case may be, the repayment of loan shall be considered from the first year of commercial operation of the project and shall be equal to the depreciation allowed for the year or part of the year.*
>
> *(5) The rate of interest shall be the weighted average rate of interest calculated on the basis of the actual loan portfolio after providing appropriate accounting adjustment for interest capitalized: Provided that if there is no actual loan for a particular year but normative loan is still outstanding, the last available weighted average rate of interest shall be considered: Provided further that if the generating station or the transmission system, as the case may be, does not have actual loan, then the weighted average rate of interest of the generating company or the transmission licensee as a whole shall be considered.*
>
> *(6) The interest on loan shall be calculated on the normative average loan of the year by applying the weighted average rate of interest.*
>
> *(7) The changes to the terms and conditions of the loans shall be reflected from the date of such re-financing."*

255. The salient features for computation of interest on loan are summarized below:

a) The gross normative loan amounting to Rs.335278.47 lakh has been considered as on 1.4.2019;

b) Cumulative repayment of loan amounting to Rs.164733.83 lakh as on 31.3.2019 has been considered as on 1.4.2019;

c) The repayment for the year has been considered equal to the depreciation allowed for that year;

d) Interest on loan has been calculated on the normative average loan of the year by applying the weighted average rate of interest for 2018-19, which is subject to truing-up.

256. Interest on loan has been worked out as under:

(Rs. in lakh)

	2019-20	**2020-21**	**2021-22**	**2022-23**	**2023-24**
Gross Normative Loan	335278.47	339021.99	387485.74	387029.72	386951.83
Cumulative Repayment up to Previous Year	164733.83	188876.16	214160.52	241482.36	269161.00
Net Loan-Opening	170544.64	150145.83	173325.22	145547.36	117790.83
Addition due to additional capitalisation	3743.53	48463.75	-456.02	-77.89	75.22
Repayment during the year	**24588.73**	**26492.50**	**28243.13**	**28223.66**	**28223.56**
Less: Repayment adjustment on account of de-capitalization	446.40	1208.14	921.29	545.02	390.71
Net Repayment	24142.34	25284.36	27321.84	27678.64	27832.85
Net Loan-Closing	150145.83	173325.22	145547.36	117790.83	90033.20
Average Loan	160345.23	161735.52	159436.29	131669.10	103912.02

Interest on loan	**14094.35**	**14216.55**	**14014.45**	**11573.71**	**9133.87**

Depreciation

257. Regulation 33 of the 2019 Tariff Regulations provides as under:

"33. Depreciation

(1) Depreciation shall be computed from the date of commercial operation of a generating station or unit thereof or a transmission system or element thereof including communication system. In case of the tariff of all the units of a generating station or all elements of a transmission system including communication system for which a single tariff needs to be determined, the depreciation shall be computed from the effective date of commercial operation of the generating station or the transmission system taking into consideration the depreciation of individual units: Provided that effective date of commercial operation shall be worked out by considering the actual date of commercial operation and installed capacity of all the units of the generating station or capital cost of all elements of the transmission system, for which single tariff needs to be determined.

(2) The value base for the purpose of depreciation shall be the capital cost of the asset admitted by the Commission. In case of multiple units of a generating station or multiple elements of a transmission system, weighted average life for the generating station of the transmission system shall be applied. Depreciation shall be chargeable from the first year of commercial operation. In case of commercial operation of the asset for part of the year, depreciation shall be charged on pro rata basis.

(3) The salvage value of the asset shall be considered as 10% and depreciation shall be allowed up to maximum of 90% of the capital cost of the asset:

Provided that the salvage value for IT equipment and software shall be considered as NIL and 100% value of the assets shall be considered depreciable;

Provided further that in case of hydro generating stations, the salvage value shall be as provided in the agreement, if any, signed by the developers with the State Government for development of the generating station:

Provided also that the capital cost of the assets of the hydro generating station for the purpose of computation of depreciated value shall correspond to the percentage of sale of electricity under long-term power purchase agreement at regulated tariff:

Provided also that any depreciation disallowed on account of lower availability of the generating station or unit or transmission system as the case may be, shall not be allowed to be recovered at a later stage during the useful life or the extended life.

(4) Land other than the land held under lease and the land for reservoir in case of hydro generating station shall not be a depreciable asset and its cost shall be excluded from the capital cost while computing depreciable value of the asset.

(5) Depreciation shall be calculated annually based on Straight Line Method and at rates specified in Appendix-I to these regulations for the assets of the generating station and transmission system: Provided that the remaining depreciable value as on 31st March of the year closing after a period of 12 years from the effective date of commercial operation of the station shall be spread over the balance useful life of the assets.

(6) In case of the existing projects, the balance depreciable value as on 1.4.2019 shall be worked out by deducting the cumulative depreciation as admitted by the Commission upto 31.3.2019 from the gross depreciable value of the assets.

(7) The generating company or the transmission licensee, as the case may be, shall submit the details of proposed capital expenditure five years before the completion of useful life of the project along with justification and proposed life extension. The Commission based on prudence check of such submissions shall approve the depreciation on capital expenditure.

(8) In case of de-capitalization of assets in respect of generating station or unit thereof or transmission system or element thereof, the cumulative depreciation shall be adjusted by taking into account the depreciation recovered in tariff by the de-capitalized asset during its useful services.

258. In line with Regulation 33 of the 2019 Tariff Regulations, the cumulative depreciation amounting to Rs.164733.83 lakh as on 31.3.2019 has been considered for the purpose of tariff. Further, the value of freehold land included in the average capital cost has been adjusted while calculating depreciable value for the purpose of tariff. Accordingly, depreciation has been calculated as under:

(Rs. in lakh)

	2019-20	2020-21	2021-22	2022-23	2023-24
Opening Gross Block (A)	478969.24	484317.13	553551.06	552899.60	552788.32
Addition due to Projected additional capitalisation (B)	5347.89	69233.93	(-)651.45	(-)111.28	107.46
Closing Gross Block (C)	484317.13	553551.06	552899.60	552788.32	552895.78
Average Gross Block (D) = [(A+C)/2]	481643.18	518934.09	553225.33	552843.96	552842.05
Value of Freehold land included in Gross Block (E)	17513.13	17513.13	17513.13	17513.13	17513.13
Depreciable value (F) = [(D-E) x 90%]	417717.05	451278.87	482140.98	481797.75	481796.03
Remaining depreciable value at the beginning of the year (G) = [F - 164733.83]	252983.22	262402.70	267980.46	240315.39	212635.03

Rate of Depreciation	5.1052%	5.1052%	5.1052%	5.1052%	5.1052%
Depreciation (K)	**24588.73**	**26492.50**	**28243.13**	**28223.66**	**28223.56**
Cumulative depreciation at the end of the year (before adjustment for de-capitalization) (L) = [K + Cumulative depreciation at the end of previous year*]	**189322.56**	**215815.06**	**244058.19**	**272281.85**	**300505.41**
Less: Depreciation adjustment on account of de-capitalization (M)	**446.40**	**1208.14**	**921.29**	**545.02**	**390.71**
Net Cumulative depreciation at the end of the year (N)	188876.16	214160.52	241482.36	269161.00	296993.84

** Note: The Cumulative Depreciation at the end of 2018-19 is Rs.164733.83 lakh.*

259. The depreciation allowed as above is subject to revision at the time of truing up of tariff for 2019-24 tariff period.

Unrecovered Depreciation on De-capitalisation

260. The Petitioner has claimed following amounts of unrecovered depreciation for the respective financial years of 2019-24 tariff period

(Rs. in lakh)

2020	2021	2022	2023	2024	Total
538.14	1297.37	813.33	378.54	207.54	**3234.92**

261. In line with our discussion and decision on this issue, in paragraph 133 and paragraph 134 of this order, the prayer of the Petitioner to allow the recovery of

unrecovered depreciation (in respect of asset not in use) for the 2019-24 tariff period is not allowed, as the same is not in conformity with the provisions of the 2019 Tariff Regulations.

O&M expenses

262. The O&M expenses claimed by the Petitioner for the 2019-24 tariff period are as below:

(Rs. in lakh)

	2019-20	2020-21	2021-22	2022-23	2023-24
Normative O&M Expenses as per Regulation 35(1)(i) of the 2019 Tariff Regulations	23635.50	24465.00	25326.00	26218.50	27132.00
Water Charges as per Regulation 35(1)(6) of the 2019 Tariff Regulations	1930.35	2117.58	2329.34	2562.28	2826.22
Security expenses as per Regulation 35(1)(6) of the 2019 Tariff Regulations	808.07	882.05	956.60	1037.45	1125.15
Capital spares as per Regulation 35(1)(6) of the 2019 Tariff Regulations	170.02	55.00	850.00	0.00	0.00
Rental and Conveyance Expenses in lieu of 2nd township	75.65	79.43	83.40	87.57	91.95
O&M expenses for RO Plant	593.40	623.07	880.57	924.60	970.83
Total O&M Expenses	**27212.99**	**28222.13**	**30425.91**	**30830.40**	**32146.15**

263. The Respondent KSEBL has contended that claim for additional O&M expenses in lieu of 2nd township and Ash disposal expenses is not in line with the 2019 Tariff Regulations and, therefore, may be rejected. It has further contended that there is no provision under the 2019 Tariff Regulations to claim additional O&M expenses to run the Reverse Osmosis plant and the same may also be disallowed.

264. Regulation 35(1)(i) of the 2019 Tariff Regulations provide the following Normative O&M expense norms for 500 MW series for coal based generating stations:

(Rs. lakh/MW)

2019-20	2020-21	2021-22	2022-23	2023-24
22.51	23.30	24.12	24.97	25.84

265. In terms of Regulation 35(1)(i) of the 2019 Tariff Regulations, the Petitioner has claimed the following Normative O&M expenses for the 2019-24 tariff period:

(Rs. in lakh)

2019-20	2020-21	2021-22	2022-23	2023-24
23635.50	24465.00	25326.00	26218.50	27132.00

266. The Normative O&M expenses claimed by the Petitioner is in accordance with Regulation 35(1)(i) of the 2019 Tariff Regulations and hence allowed.

Water Charges

267. Regulation 35(6) of the 2019 Tariff Regulations provide as under:

> *"(6) The Water Charges, Security Expenses and Capital Spares for thermal generating stations shall be allowed separately after prudence check:*
>
> *Provided that water charges shall be allowed based on water consumption depending upon type of plant and type of cooling water system, subject to prudence check. The details regarding the same shall be furnished along with the petition;*
>
> *xxxxx*

268. The Petitioner has claimed Water charges (on projected basis) in terms of Regulation 35(6) of the 2019 Tariff Regulations as under:

(Rs. in lakh)

2019-20	2020-21	2021-22	2022-23	2023-24
1930.35	2117.58	2329.34	2562.28	2826.22

269. In support of the projected water charges claimed, the Petitioner has furnished the following computations:

		2019-20	2020-21	2021-22	2022-23	2023-24
Gross generation	MU	7839.72	7818.30	7818.30	7818.30	7839.72
Specific Raw water Consumption for FY 2018-19	m^3/MWh	2.31	2.31	2.31	2.31	2.31
Total Raw Consumption	m^3	18142383	18092814	18092814	18092814	18142383
Rate of Raw water charges	Rs./m^3	10.64	11.70	12.87	14.16	15.58
Total Raw water Expenses	Rs. in lakh	**1930.35**	**2117.58**	**2329.34**	**2562.28**	**2826.22**

270. The Petitioner has submitted that the Water charges are based on the gross generation during the year and the estimated Specific Raw water consumption per unit. It has submitted that Specific Raw water consumption in 2018-19 is 2.31 m^3 per Megawatt hour (MWh) which is below the Ministry of Environment & Forest guidelines and the same has been projected during the 2019-24 tariff period. The Petitioner has submitted that DVC vide its Office Memorandum dated 23.7.2019 had revised the Water tariff for Industrial consumers (drawing water from reservoir/ river) including the Petitioner from Rs.5.7/kl to Rs.10.64/kl, with an annual escalation of 10% effective from 1.4.2019. Considering the revised tariff including the annual escalation and Water consumption at Specific Raw water consumption of 2.31 m^3/MWh, the Petitioner has prayed that the Commission may approve the projected Raw Water charges for the 2019-24 tariff period as claimed. The Petitioner has also furnished the copy of the DVC OM dated 23.7.2019 along with the communication made by the Petitioner with DVC.

271. Considering the fact that Water charges projected by the Petitioner for the 2019-24 tariff period is based on actual consumption of water during the year 2018-19 and the tariff rates specified by DVC for water, we allow the projected water charges claimed by the Petitioner for the 2019-24 tariff period. However, the projected water charges allowed are subject to truing-up, based on prudence check of the actual water charges paid.

Security Expenses

272. The first proviso to Regulation 35(6) of the 2019 Tariff Regulations provide as under:

"Provided further that the generating station shall submit the assessment of the security requirement and estimated expenses;

273. The actual Security expenses incurred by the Petitioner for the 2014-19 tariff period is as under:

(Rs. in crore)

	2014-15	2015-16	2016-17	2017-18	2018-19
Plant Security	5.51	6.44	6.46	6.44	6.96
Other Security related - AMC	0.00	0.02	0.12	0.15	0.35
Total Security Expenses	5.51	6.46	6.59	6.59	7.32

274. The Security Expenses projected by the Petitioner for the 2019-24 tariff period is as under:

(Rs. in lakh)

	2019-20	2020-21	2021-22	2022-23	2023-24
Plant Security	754.88	818.39	887.23	961.86	1042.78
Other Security related AMC	38.40	41.64	45.14	48.93	53.05
Total Security Expenses	793.29	860.02	932.37	1010.80	1095.83

275. In addition to the above, the Petitioner has claimed projected additional security expenses for the following:

(Rs. in lakh)

	2019-20	2020-21	2021-22	2022-23	2023-24
Issuance of smart card	5.00	5.50	6.05	6.66	7.32
Purchase of Security gadgets	8.00	8.80	9.68	10.65	11.71
AMC for Turnstile	1.58	6.93	7.62	8.39	9.22
AMC for Boom Barrier	0.20	0.80	0.88	0.97	1.06
Total	14.78	22.03	24.23	26.66	29.32

276. Accordingly, the total Security Expenses (on projection basis) claimed by the Petitioner in terms of Regulation 35(1)(6) of the 2019 Tariff Regulations is as under:

(Rs. in lakh)

	2019-20	2020-21	2021-22	2022-23	2023-24
Security Expenses	793.29	860.02	932.37	1010.80	1095.83
Additional Security Expenses	14.78	22.03	24.23	26.66	29.32
Total Security expenses	**808.07**	**882.05**	**956.60**	**1037.45**	**1125.15**

277. Considering the fact that the additional capitalization towards the Construction of Boom Barrier has not been allowed in this order, the expenditure for AMC of the said asset is not allowed as part of the security expenses. Accordingly, the projected Security expenses allowed for the 2019-24 tariff period are as under.

(Rs. in lakh)

	2019-20	2020-21	2021-22	2022-23	2023-24
Security expenses claimed as per Regulation35(1)(6) of the 2019 Tariff Regulations	808.07	882.05	956.6	1037.45	1125.15
Less Security expenses not allowed (for boom barrier)	0.20	0.80	0.88	0.97	1.06
Security Expenses allowed	**807.87**	**881.25**	**955.72**	**1036.48**	**1124.09**

Capital spares

278. The last proviso to Regulation 35(6) of the 2019 Tariff Regulations provide as under:

> *"Provided also that the generating station shall submit the details of year-wise actual capital spares consumed at the time of truing up with appropriate justification for incurring the same and substantiating that the same is not funded through compensatory allowance as per Regulation 17 of Central Electricity Regulatory Commission (Terms and Conditions of Tariff) Regulations, 2014 or Special Allowance or claimed as a part of additional capitalisation or consumption of stores and spares and renovation and modernization."*

279. The Capital spares claimed by the Petitioner in terms of Regulation 35(6) of the 2019 Tariff Regulations are as under:

(Rs. in lakh)

2019-20	2020-21	2021-22	2022-23	2023-24
170.00	55.00	850.00	0.00	0.00

280. The Petitioner has submitted that it requires several capital spares for critical equipment during the 2019-24 tariff period in order to ensure the reliability and availability of the main equipment. It has further submitted that these capital spares have not been included in the additional capitalization claims projected by the Petitioner above. Accordingly, the Petitioner has submitted that the Commission may approve the expenditure on capital spares as under:

(Rs. in lakh)

Item/Activity	2019-20	2020-21	2021-22	2022-23	2023-24
Coal Mill Gearbox	0.00	0.00	400.00	0.00	0.00
Crusher Rotor Assembly (Capital Spare -Imported)	0.00	0.00	150.00	0.00	0.00
Procurement of 400 kV Breaker	0.00	55.00	0.00	0.00	0.00
TDBFP Recirculation valve	170.00	0.00	0.00	0.00	0.00
TG Bearing Set	0.00	0.00	300.00	0.00	0.00
Total Capital Spares	170.00	55.00	850.00	0.00	0.00

281. It is evident from the last proviso to Regulation 35(6) of the 2019 Tariff Regulations that the Petitioner is required to furnish proper details and justification, the actually consumed capital spares, at the time of truing up of tariff. Therefore, the Petitioner is granted liberty to approach the Commission with details of capital spares consumed, at the time of truing-up of tariff in terms of the last proviso to the said regulation and the same will be considered in accordance with law.

Rental and Conveyance expenses in lieu of 2nd Township

282. In addition to the normative O&M expenses, the Petitioner has claimed Rental and Conveyance expenses in lieu of 2nd township, as under:

(Rs. in lakh)

2019-20	2020-21	2021-22	2022-23	2023-24
75.65	79.43	83.40	87.57	91.95

283. The Petitioner has considered the incremental rate of 5% per annum on the average of the total expenditure incurred during the 2014-19 tariff period, to claim the projected Rental and Conveyance expenses in lieu of 2nd township, as under:

(Rs.in lakh)

	2014-15	2015-16	2016-17	2017-18	2018-19
Lease Rental **(a)**	86.15	90.45	94.98	99.73	04.71
Rent deduction from employees **(b)**	73.30	76.96	80.81	84..85	89.09
Transportation cost **(c)**	62.80	65.94	69.23	72.69	76.33
Total (a-b+c)	**75.65**	**79.43**	**83.40**	**87.57**	**91.95**

284. The reasons furnished by the Petitioner in support of the claim are the same as those furnished by the Petitioner for the 2014-19 tariff period as extracted in paragraph 145 and paragraph 146 of this order. The Commission, after considering the submissions of the Petitioner had rejected the claim of the Petitioner under this head in paragraph 149 of this order. In line with the said decision, the additional O&M expenses for Rental and Conveyance Expenses in lieu of 2nd township for the 2019-24 tariff period is for 2019-24 tariff period is not allowed.

O&M Expenses for RO Plant

285. The Petitioner has also claimed additional O&M Expenses towards Reverse Osmosis Plant for the 2019-24 tariff period as under:

(Rs. in lakh)

2019-20	2020-21	2021-22	2022-23	2023-24
593.40	623.07	880.57	924.60	970.83

286. The Petitioner has submitted that in order to comply with the statutory directions, it has to run the Reverse Osmosis (RO) Plant. It has also submitted that with the commissioning of the RO Plant, the Petitioner is required to incur substantial expenditure towards O&M expenses of the RO Plant on a daily basis. While pointing out that O&M expenses mainly consist of cost towards consumables and service cost, the Petitioner has submitted that the consumable cost mainly consists of cost towards chemical consumption on daily basis, cost towards routine maintenance spares and replacement of cartridge, membrane, media etc. Accordingly, the Petitioner, as per preliminary estimates and considering the chemical cost, the rate of replacement of membranes and consumption of regular maintenance spares and an annual escalation of 5%, has projected the cost of consumables during the 2019-24 tariff period as below:

(Rs. in lakh)

	2019-20	2020-21	2021-22	2022-23	2023-24
Chemical consumables	442.44	464.56	487.79	512.18	537.79
Replacement of Cartridge & Membrane	90.36	94.88	99.62	104.60	109.83
Resin and Media top up	9.6	10.08	10.58	11.11	11.67
Maintenance Spares	51.00	53.55	56.23	59.04	61.99
Total Consumables	593.40	623.07	654.22	686.93	721.28
O&M Services	**0.00**	**0.00**	226.34	237.66	249.54
Total O&M Expenses	**593.40**	**623.07**	**880.57**	**924.60**	**970.83**

287. The O&M expense norms for the thermal generating station covers the O&M of power plants in general, including equipment's such as ETP, STP etc., which also uses the consumables/chemicals and for other plants not having RO system, which

may be treating water with other alternative technologies. Regulation 35(6) of the 2019 Tariff Regulations provide for the grant of O&M expenses towards Water charges, Security Expenses and Capital spares, separately. As the provisions of 2019 Tariff Regulations do not provide for the grant of additional O&M expenses toward RO System of plant, the claim of the Petitioner is not permissible.

288. Based on the above discussion, the O&M expenses allowed for the 2019-24 tariff period is summarized as under:

(Rs. in lakh)

	2019-20	**2020-21**	**2021-22**	**2022-23**	**2023-24**
Normative O&M expenses as per Regulation 35(1)(i) of the 2019 Tariff Regulations	23635.50	24465.00	25326.00	26218.50	27132.00
Water Charges as per Regulation 35(1)(6) of the 2019 Tariff Regulations	1930.35	2117.58	2329.34	2562.28	2826.22
Security expenses as per first proviso to Regulation 35(1)(6) of the 2019 Tariff Regulations	807.87	881.25	955.72	1036.48	1124.09
Capital spares as per last proviso to Regulation 35(1)(6) of the 2019 Tariff Regulations	0.00	0.00	0.00	0.00	0.00
Total O&M Expenses allowed	26373.72	27463.83	28611.06	29817.26	31082.31
Total O&M Expenses claimed	**27212.99**	**28222.13**	**30425.91**	**30830.40**	**32146.15**

Ash Disposal Expenses

289. The Commission in its order dated 25.4.2019 in Review Petition No 16/RP/2018 (in Petition No. 152/GT/2015) had allowed the projected 'Ash disposal' expenses for the 2014-19 tariff period based on the following observations:

> *"42. In the present case, the Petitioner is only claiming the cost incurred by it pertaining to the activity of ash disposal during the period 2014-18 periods on the same basis as was approved during 2011-14. The Additional O&M expenses for Ash Disposal claimed by the Petitioner in the impugned Order is basically due to limited ash pond capacity, which require mandatory disposal of ash from the pond, as per the statute prescribed by MoEF and not of the nature of expenses claimed by NTPC, in Petition No. 172/MP/2016. Hence, there is an error apparent on the face of the record and the expenditure of ₹260.90 lakh claimed by the Petitioner for Ash disposal during 2014-18 is allowed. However, the same will be trued up at the end of tariff period with prudence check and the Petitioner is directed to submit the relevant documents in support of the said expenditure."*

290. Accordingly, we have, in paragraph 153 of this order, allowed the audited actual 'Ash disposal' expenses for the 2014-19 tariff period as under:

(Rs. in lakh)

2014-15	2015-16	2016-17	2017-18	2018-19	Total
6098.44	3791.36	3647.73	3320.87	3340.46	20198.86

291. The Petitioner has claimed Ash disposal expenses (on projection basis) for the 2019-24 tariff period as under:

(Rs. in lakh)

2019-20	2020-21	2021-22	2022-23	2023-24
3425.52	3416.16	3416.16	3416.16	3425.52

292. The Petitioner has submitted that on account of dropping of Ash conveying pipeline, due to uncertainty in the allocation of the abandoned mines for ash disposal by ECL management, the ash disposal expenses may be allowed. It is observed that the coal received at Maithon site is of sub-optimal quality as compared to the design coal and ash content is to the tune of 43% to 46% (approx.). However, due to limited capacity of the Ash ponds, the Petitioner has considered the option of disposing unutilized ash through bulkers to sites for back filling of mines and to other approved locations for land filling, thereby incurring the cost towards excavation and transportation of pond ash. The projected ash disposal expenses claimed by the Petitioner are as follows.

Period	Consumption Plan ***(As Per 85% PLF)*** (MT)	Ash Generation (MT)	Fly Ash (gainful utilisation) (MT)	Fly Ash (stowing of mines) (MT)	Bottom Ash (MT)	Pond Ash (MT)	Ash Disposal cost ***(Rs. in lakh)***
2019-20	4598744	1868010	373602	1338016	311335	159404	3425.6
2020-21	4586180	1862906	372581	1334361	310484	158968	3416.2
2021-22	4586180	1862906	372581	1334361	310484	158968	3416.2
2022-23	4586180	1862906	372581	1334361	310484	158968	3416.2
2023-24	4598744	1868010	373602	1338016	311335	159404	3425.6

293. The Respondent KSEBL has contended that claim for additional O&M expenses for Ash disposal expenses is not in line with the 2019 Tariff Regulations and, therefore, may be rejected.

294. The matter has been considered. We observe that the Ash disposal expenses claimed by the Petitioner and allowed to this generating station since COD, is in view of limited capacity of the Ash ponds and the mandatory ash disposal in terms of the notification of MOEF&CC mandating 100% ash utilization. Considering the limited capacity of ash ponds and the fact that the Petitioner is under an obligation of meeting 100% ash utilization as per MOEF & CC notification, we, in line with our dated 25.4.2019 in Review Petition No.16/RP/2018 (in Petition No.152/GT/2015) (as quoted in paragraph 289 above), allow the expenses claimed towards Ash disposal, on projection basis, for the 2019-24 tariff period as under:

(Rs. in lakh)

2019-20	2020-21	2021-22	2022-23	2023-24
3425.52	3416.16	3416.16	3416.16	3425.52

295. This is however subject to prudence check at the time of truing-up of tariff of the generating station. The Petitioner is directed to award Ash disposal contracts based on the transparent bidding process and shall submit the details of bidding while claiming the actual ash disposal expenses during truing up of tariff for the 2019-24 tariff period. Considering the fact that the reimbursement of ash disposal expenses is allowed based on the special circumstances (limited ash pond storage) for this generating station, these expenses are not made part of the O&M expenses allowed and the consequent annual fixed charges determined in this order.

296. Accordingly, the total O&M expenses allowed to the generating station for the 2019-24 tariff period is summarised as under:

(Rs. in lakh)

	2019-20	2020-21	2021-22	2022-23	2023-24
Normative O&M expenses as per Regulation 35(1)(i) of the 2019 Tariff Regulations	23635.50	24465.00	25326.00	26218.50	27132.00
Water Charges as per Regulation 35(1)(6) of the 2019 Tariff Regulations	1930.35	2117.58	2329.34	2562.28	2826.22
security expenses as per Regulation 35(1)(6) of the 2019 Tariff Regulations	807.87	881.25	955.72	1036.48	1124.09
Capital spares as per Regulation 35(1)(6) of the 2019 Tariff Regulations	0.00	0.00	0.00	0.00	0.00
Total O&M Expenses allowed as per Regulations	**26373.72**	**27463.83**	**28611.06**	**29817.26**	**31082.31**
Total O&M Expenses claimed (excluding Ash expenses claimed)	27212.99	28222.13	30425.91	30830.4	32146.15

Operational Norms

297. The operational norms considered by the Petitioner in Form-3 of the petition, is as under:

Normative Annual Plant Availability Factor (%)	85
Station Heat Rate (kcal/kWh)	2388
Auxiliary Power Consumption (%)	6.25
Specific Oil Consumption (ml/kWh)	0.50

Normative Annual Plant Availability Factor (NAPAF)

298. In terms of Regulation 49(A)(a) of the 2019 Tariff Regulations, the NAPAF of the thermal generating station is 85%. Hence, the NAPAF of 85% as considered by the Petitioner is in order and the same has been considered for the purpose of tariff.

Station Heat Rate

299. Regulation 49(C)(b)(i) of the 2019 Tariff Regulations provides for Station Heat Rate as under:

"(b) Gross Station Heat Rate

(b) Thermal Generating Station achieving COD on or after 1.4.2009.

(i) Coal-based and lignite-fired Thermal Generating Stations

= 1.05 X Design Heat Rate (kCal/kWh)

Where the Design Heat Rate of a generating unit means the unit heat rate guaranteed by the supplier at conditions of 100% MCR, zero percent make up, design coal and design cooling water temperature/back pressure.

Provided that the design heat rate shall not exceed the following maximum design unit heat rates depending upon the pressure and temperature ratings of the units:

Pressure Rating (Kg/cm2)	*150*	*170*	*170*
SHT/RHT (0C)	*535/535*	*537/537*	*537/565*
Type of BFP	*Electrical Driven*	*Turbine Driven*	*Turbine Driven*
Max Turbine Heat Rate (kCal/kWh)	*1955*	*1950*	*1935*
Min. Boiler Efficiency			
Sub-Bituminous Indian Coal	*0.86*	*0.86*	*0.86*
Bituminous Imported Coal	*0.89*	*0.89*	*0.89*
Sub-Bituminous Indian Coal	*2273*	*2267*	*2250*
Bituminous Imported Coal	*2197*	*2191*	*2174*

Provided further that in case pressure and temperature parameters of a unit are different from above ratings, the maximum design unit heat rate of the nearest class shall be taken:

Provided also that where unit heat rate has not been guaranteed but turbine cycle heat rate and boiler efficiency are guaranteed separately by the same supplier or different suppliers, the unit design heat rate shall be arrived at by using guaranteed turbine cycle heat rate and boiler efficiency:

Provided also that where the boiler efficiency is below 86% for Sub-bituminous Indian coal and 89% for bituminous imported coal, the same shall be considered as 86% and 89% respectively for Sub-bituminous Indian coal and bituminous imported coal for computation of station heat rate:

Provided also that maximum turbine cycle heat rate shall be adjusted for type of dry cooling system:

Provided also that if one or more generating units were declared under commercial operation prior to 1.4.2019, the heat rate norms for those generating units as well as generating units declared under commercial operation on or after 1.4.2019 shall be lowest of the heat rate norms considered by the Commission during tariff period 2014-19 or those arrived at by above methodology or the norms as per the sub-clause (C)(a)(i) of this Regulation:):"

300. The Petitioner in Form-2 of the petition has furnished the Boiler Efficiency as 87.80% and the Turbine Heat Rate as 1945 kCal/kWh. Considering the operating margin of 5% as specified in Regulation 49(C)(b)(i), the Gross Station Heat Rate of the generating station works out as 2326.03 kCal/kWh (1945x1.05)/0.878). Against this, the Petitioner in Form-3 of the petition has considered the SHR of 2388 kCal/kWh for the 2019-24 tariff period, seeking relaxation in the Station Heat Rate on the following grounds:

(a) The Commission in its order dated 26.12.2017 in Petition No.152/GT/2015, had approved the Station Heat Rate of 2375 kCal/kWh for the 2014-19 tariff period at level of Gross Station Heat Rate of the existing thermal generating station i.e. 2375 kCal/kWh in terms of the 2014 Tariff Regulations. The Gross Station Heat Rate of the Petitioner's station was 2377 kCal/kWh (1.045x1945/0.855) considering the boiler efficiency of 85.5% and Turbine Heat Rate of 1945kCal/kWh in terms of Regulation 36 (C) (c) of the 2014 Tariff Regulations. Considering the submissions of the Petitioner and noting the poor quality of coal received at the plant, the Commission had approved the boiler efficiency of 85.5% obtained during the PG test with actual coal compared to 87.80% as guaranteed by OEM (M/s BHEL) using design coal. The relevant para of the order dated 26.12.2017 is extracted below:

"152. We have examined the matter. The issue of deviation in the design boiler efficiency and the actual boiler efficiency was raised by the Petitioner in Petition No. 274/2010 and the Commission after considering the submissions of Petitioner and the actual values of the PG test vide had relaxed the norms of the station heat rate vide order dated 19.11.2014……
Xxxxx

153. The Commission in 2009-14 tariff allowed the GSHR of 2425 kCal/kWh with a rider that up to 2360.47 kCal/kWh should be passed on to the beneficiaries in full and the benefit of heat rate achieved below 2360.47 kCal/ kWh, may be retained by the Petitioner. The Petitioner has submitted that Boiler Efficiency is 85.5% by using actual coal received by the Petitioner as the quality of coal received remains the same. By considering the boiler efficiency of 85.5% and Turbine cycle heat rate of 1945 Kcal/kWh, the Gross Station Heat Rate of the generating station works out as 2377 kCal/kWh (1.045x1945/0.855) for the period 2014-19. However, the Petitioner has considered the Gross Station Heat Rate of 2375 kCal/kWh. The GSHR claimed by the Petitioner during 2014-19 is less than the GSHR allowed during 2009-14 period. In view of this, the Gross Station Heat Rate of 2375 Kcal/ kWh for the period 2014-19 has been allowed." (emphasis supplied)

301. The Petitioner has submitted that due to availability of sub-optimal quality of coal in the region, the quality of the actual coal received at the plant has not improved and, therefore, the condition remains the same till date. Accordingly, the Petitioner has prayed that the Commission may approve the boiler efficiency at 85.5% as obtained during the PG test with the actual coal for the 2019-24 tariff period, in exercise of the power vested under Regulation 3(25) read with Regulation 54 of the 2019 Tariff Regulations. According to the Petitioner, by considering the Boiler Efficiency of 85.5% as the quality of coal received remain suboptimal and with the Turbine Heat Rate of 1945 kCal/kWh, the Gross Station Heat Rate works out as 2388 kCal/kWh (1.05x1945/0.855) for the 2019-24Tariff Period.

302. The Commission vide ROP of the hearing dated 2.6.2020 had directed the Petitioner to furnish the actual coal quality (GCV, proximate and ultimate analysis)

received in generating station during the year 2019-20 and the coal quality of worst coal, design coal and best coal envisaged by the OEM for guaranteed parameter of boiler efficiency. In response, the Petitioner vide affidavit dated 20.6.2020 has furnished the details and submitted as under:

a) Since the current coal quality has not improved vis-à-vis the coal quality that was there at the time of PG test, the Petitioner has proposed to consider the Boiler efficiency as 85.5% in the 2019-24 tariff period as well.

b) The proximate and ultimate analysis data submitted by the Petitioner for the entire period of 2019-20 is not a correct representative of the coal that will be fired in the balance period of the control period. The same is on account of the fact that imported coal of high quality (which was initiated during H2 of 2018-19 due to coal scarcity at that time) was used along with domestic coal for first 5 months. Approximately 1.98 lakh MT of Imported coal was received in H2 of 2018-19 with opening stock of ~32000 MT in April 2020 and ~28000 MT received in Q1 of 2019-20.

c) Since coal supplies from domestic sources have improved after the said period, albeit the quality has not improved. It is most likely that only domestic coal shall be fired in the balance control period as well. Further, the coal quality is likely to be the same as in the latest 9 months when only domestic coal was fired. Accordingly, for the purposes of comparing the coal quality during PG test and the present/future coal quality of domestic coal, the Petitioner proposes to discard the data for first two months of 2019-20 and consider the coal characteristics for the last 9 months i.e. September 2019 to May 2020.

d) With respect to coal quality during the PG test, the ash content has reduced slightly by 2.11% from 42.98% to 40.87% (against design of 36.19%), which has resulted in small increase in GCV by 109 kCal/kg, which should theoretically improve the boiler efficiency. Simultaneously, the moisture content in the coal has also increased by 0.59%, which causes some more heat loss due to evaporation and hence causes decrease in efficiency. The correction to be applied for variation in GCV and moisture may be done by linear approximation of the correction curves for GCV and moisture variation supplied by the OEM. A copy of the correction curves for GCV and Moisture is annexed herewith.

e) The GCV correction curve shows that for an improvement of GCV of 240 kCal/kg (from 4431 to 4671), the efficiency improves by 0.28%. Similarly, for an increase in moisture by 0.4% (from 7.11 to 7.61), the efficiency drops by 0.05%. Applying these corrections to the PG test result of 85.5%, the theoretical net improvement in efficiency comes to only 0.049% (109x0.28/240 – 0.59x0.05/0.5) i.e. 85.5% improves to 85.55% only. Thus, the current coal quality should theoretically yield approximately the same efficiency as was measured during PG test i.e. 85.5%.

303. The Respondent KSEBL has objected to the prayer of the Petitioner and has submitted that the claim of the Petitioner may not be allowed.

304. The matter has been considered. The Commission in its orders relating to the 2009-14 and 2014-19 tariff periods had considered the Boiler Efficiency as 85.5% against the Design Efficiency of 87.8% for the generating station, in relaxation of the Tariff Regulations, based on the lower boiler efficiency achieved during PG test due to poor quality of coal having more ash content and more moisture. The details of the coal quality (domestic coal) furnished by the Petitioner, in response to the ROP dated 2.6.2020, indicate that there is slight improvement in the GCV of coal and also some increase in moisture is observed, as compared to the coal burnt at the time of PG test. It is also observed that the variation in quality of coal from PG test quality to the quality of coal received during the year 2019-20 has improved the efficiency by 0.05% only. The COD of the generating station is 24.7.2012. The Petitioner was granted relaxation in Boiler Efficiency due to poor quality of coal received during the previous tariff periods, as stated above. The question for consideration is 'whether the relaxation granted to the Petitioner during the previous tariff periods is required to be continued on a perpetual basis, during the entire contract period.

305. The Petitioner has considered PG Test performance based on the quality of coal permissible to the Boiler and Plant characteristics. Also, the PPA was executed by the Petitioner based on demonstrable plant characteristics. The Boiler efficiency had undergone changes due to receipt of poor quality of coal in comparison to the quality envisaged at the time of PG test. The deterioration of coal quality is temporary and cannot alter the plant characteristics on a perpetual basis**.** Coal is being procured by the Petitioner after execution of the Fuel Supply Agreement with the coal supplier. It was the obligation of the Petitioner, while entering into FSA, to

ensure the desired quality of coal, by enforcing the provisions of FSA or by exploring any other alternate sources of coal. The Petitioner, having not been prevented from exploring alternate source of coal, cannot, on a perpetual basis, be permitted to pass on the burden on the beneficiaries on this count, more so when the Petitioner has not fulfilled the said obligations. It is further noticed that the Petitioner has not furnished any documentary evidence substantiating the efforts taken by it to ensure the good quality of coal. In our view, the relaxation of SHR of the generating station, in perpetuity, based on coal quality, will render the operational parameters specified under the 2019-24 Tariff Regulations for all generators redundant, as more often than not, the coal quality may no match with design coal. In view of this, there is no merit in the prayer of the Petitioner for relaxation of SHR on grounds of deterioration in quality of coal. The Petitioner is directed to ensure the required quality of coal as envisaged during the PG test. Accordingly, considering the operating margin of 5% as specified in Regulation 49(C)(b)(i) of the 2019 Tariff Regulations, the GSHR of the generating station works out as 2326.03 kcal/kWh [1945*1.05)/0.878] and the same is considered and allowed.

306. Regulation 49(E)(a)(ii) of the 2019 Tariff Regulations provides for Auxiliary power Consumption (APC) as under:

"(E) Auxiliary Energy Consumption

(a) Coal-based generating stations except at (b) below:

	With Natural Draft cooling tower or without cooling tower
(i) 200 MW series	*8.5%*
(ii) 300 MW and above	
Steam driven boiler feed pumps	*5.75%*
Electrically driven boiler feed pumps	*8.0%*

Provided that for thermal generating stations with induced draft cooling towers and where tube type coal mill is used, the norms shall be further increased by 0.5% and 0.8% respectively:…"

307. Both the units of the generating station of the Petitioner, with capacity of 300 MW and above have Steam-driven Boiler Feed Pumps & Induced Draft Cooling Tower. Therefore, both the units qualify for a normative APC of 6.25% (5.75% for Units having Steam-driven BFP and additional 0.50% for having Induced Draft Cooling Tower). In view of the above, the normative APC of 6.25% as considered by the Petitioner is in order and therefore allowed.

Specific Oil Consumption

308. Regulation 49(D)(a) of the 2019 Tariff Regulations provides for the Secondary fuel oil consumption of 0.50 ml/kWh for Coal based generating stations. Hence, the Secondary fuel oil consumption considered by the Petitioner in terms of the said regulation is allowed.

Interest on Working Capital

309. Sub-section (a) of clause (1) of Regulation 34 of the 2019 Tariff Regulations provides as under:

> *"34 (1) the working capital shall cover:*
>
> *(a) Coal-based/lignite-fired thermal generating stations*
>
> *(i) Cost of coal or lignite and limestone towards stock, if applicable, for 10 days for pit-head generating stations and 20 days for non-pit-head generating stations for generation corresponding to the normative annual plant availability factor or the maximum coal/lignite stock storage capacity whichever is lower;*
>
> *(ii) Cost of coal or lignite and limestone for 30 days for generation corresponding to the normative annual plant availability factor;*
>
> *(iii) Cost of secondary fuel oil for two months for generation corresponding to the normative annual plant availability factor, and in case of use of more than one secondary fuel oil, cost of fuel oil stock for the main secondary fuel oil;*
>
> *(iv) Maintenance spares @ 20% of operation and maintenance expenses including water charges and security expenses;*
>
> *(v) Receivables equivalent to 45 days of capacity charges and energy charges for sale of electricity calculated on the normative annual plant availability factor; and*
>
> *(v) Operation and maintenance expenses, including water charges and security expenses for one month."*

Fuel Cost and Energy Charges in Working Capital

310. The Petitioner has claimed the cost for fuel component in working capital based on price and on 'as received' GCV of coal procured and burnt for the months of October 2018, November 2018, and December 2018 and Secondary fuel oil for months of October 2018, November 2018, and December 2018 as under:

(Rs. in lakh)

Year	**2019-20**	**2020-21**	**2021-22**	**2022-23**	**2023-24**
Cost of coal for 50 days	28573.30	28573.30	28573.30	28573.30	28573.30
Cost of Secondary fuel oil 2 months	279.86	279.09	279.09	279.09	279.86

311. The computation of Energy Charges and Fuel component (coal cost) in working capital during the 2019-24 tariff period is based on "as received GCV" of coal. The Petitioner has claimed Energy Charge Rate (ECR) of 281.01 paise/kWh, based on the Weighted Average Price, GCV of coal (on 'as received' basis) and Oil procured and burnt for the three months (October, 2018 to December, 2018). The cost for fuel components in working capital has been computed deducting the 85 kCal per Kg from the Weighted Average Gross Calorific Value of coal 'as received' on account of the variation during storage, as specified under Regulation 43(2) (b) of the 2019 Tariff Regulations and considering the GCV and cost of coal procured and GCV and cost of Secondary fuel oil procured for the three months (October, 2018 to December, 2018) as given below:

(Rs. in lakh)

Year	**2019-20 & 2023-24**	**2020-21 to 2022-23**
Working Capital towards Cost of Coal for stock (20 days of generation at NAPAF)	11266.15	11266.15
Working Capital towards Cost of Coal for Generation (30 days of generation at NAPAF)	16899.22	16899.22
Coal cost for 50 days of generation at NAPAF	28165.37	28165.37
Cost of Secondary fuel oil (2 months of generation at NAPAF)	315.50	314.64

Maintenance Spares

312. The Petitioner has claimed maintenance spares in working capital as under:

(Rs. in lakh)

2019-20	2020-21	2021-22	2022-23	2023-24
5443.00	5644.00	6085.00	6166.00	6429.00

313. Regulation 34(1)(a)(iv) of the 2019 Tariff Regulations provide for maintenance spares @ 20% of the O&M expenses, including water charges and security expenses. Accordingly, maintenance spares towards Working Capital are allowed as under:

(Rs. in lakh)

2019-20	2020-21	2021-22	2022-23	2023-24
5274.74	5492.77	5722.21	5963.45	6216.46

Receivables

314. Regulation 34(1)(a)(iv) of the 2019 Tariff Regulations provide for Working Capital towards Receivables equivalent to 45 days of capacity charges and energy charges for sale of electricity calculated on the normative annual plant availability factor. Accordingly, Receivables equivalent to 45 days of capacity charges and energy charges is worked out as under:

(Rs. in lakh)

	2019-20	2020-21	2021-22	2022-23	2023-24
Receivables equivalent to 45 days of capacity charges	12427.67	13037.68	13544.78	13387.75	13244.30
Receivables equivalent to 45 days of energy charge	25582.51	25582.51	25582.51	25582.51	25582.51

O & M Expenses (1 month)

315. O&M expenses for 1 month as claimed by the Petitioner for the purpose of working capital ise as under:

(Rs. in lakh)

2019-20	2020-2021	2021-22	2022-23	2023-24
2267.70	2351.80	2535.50	2569.20	2678.80

316. Regulation 34(a)(vi) of the 2019 Tariff Regulations provides for Working Capital towards O&M expenses including water charges and security expenses for

one month of O&M expenses for coal-based generating station. Accordingly, O&M expenses (1 month) is allowed as under:

(Rs. in lakh)

2019-20	2020-21	2021-22	2022-23	2023-24
2197.81	2288.65	2384.26	2484.77	2590.19

Rate of Interest on Working Capital

317. Regulation 34(3) of 2019 Tariff Regulations provides as below:

> *"(3) Rate of interest on working capital shall be on normative basis and shall be considered as the bank rate as on 1.4.2019 or as on 1st April of the year during the tariff period 2019-24 in which the generating station or a unit thereof or the transmission system including communication system or element thereof, as the case may be, is declared under commercial operation, whichever is later:*
>
> *Provided that in case of truing-up, the rate of interest on working capital shall be considered at bank rate as on 1st April of each of the financial year during the tariff period 2019-24."*

318. In line with the Regulation 34(3) of the 2019 Tariff Regulations, the rate of interest on working capital for 2019-20 is 12.05% (i.e. 1 year SBI MCLR of 8.55% as on 1.4.2019 + 350 bps) and for 2020-21 is 11.25% (i.e. 1 year SBI MCLR of 7.75% as on 1.4.2020 + 350 bps). However, since tariff of the generating station is being determined by this order during the year 2021-22, the SBI MCLR as on 1.4.2021 (7.00%) is also available, which is lower in comparison to the same as on 1.4.2020 (7.75%). Since, the rate of interest on working capital is subject to truing-up, based on the bank rate as on 1st April of each financial year, we consider it prudent to allow the rate of interest as on 1.4.2021 for the subsequent financial years. Accordingly, the rate of interest considered is 12.05% for 2019-20, 11.25% for 2020-21 and for the subsequent years of the tariff period, the rate of interest of 10.50% (i.e. 1 year SBI MCLR of 7.00% as on 1.4.2021 + 350 bps) has been considered. Necessary computations in support of interest on working capital are as below:

(Rs. in lakh)

	2019-20	2020-21	2021-22	2022-23	2023-24
Working Capital for Cost of coal towards stock (20 days of generation at NAPAF)	11266.15	11266.15	11266.15	11266.15	11266.15

Working Capital for cost of coal towards generation (30 days of generation at NAPAF)	16899.22	16899.22	16899.22	16899.22	16899.22
Working Capital for Cost of secondary fuel oil for two months	315.50	314.64	314.64	314.64	315.50
Working Capital for Maintenance spares @ 20% of O&M expenses	5274.74	5492.77	5722.21	5963.45	6216.46
Working Capital for Receivables equivalent to 45 days of capacity charges on the NAPAF	12427.67	13037.68	13544.78	13387.75	13244.30
Working Capital for Receivables equivalent to 45 days of energy charges on the NAPAF	25582.51	25582.51	25582.51	25582.51	25582.51
Working Capital for O&M expenses (one month of O&M expenses)	2197.81	2288.65	2384.26	2484.77	2590.19
Total Working Capital	73963.61	74881.62	75713.77	75898.49	76114.33
Rate of Interest on Working Capital	12.05%	11.25%	10.50%	10.50%	10.50%
Interest on Working Capital	**8912.61**	**8424.18**	**7949.95**	**7969.34**	**7992.01**

Additional Tax on Income due to adoption of Indian Accounting Standards ('Ind AS')

319. In addition to the components of the annual fixed charges allowed under the regulations, viz; Return on equity, Interest on normative loan, Depreciation, interest on working capital and O&M expenses, the petitioner has also claimed additional tax arisen on account of amendments in the Finance Act, 2017 to be recovered separately over and above the annual fixed charges as per the change in law provisions. The additional tax amount claimed by the Petitioner is Rs.38.28 lakh each for the years 2019-20 and 2020-21 respectively.

320. The matter has been examined. As regards the recovery of additional tax liability due to implementation of Ind AS, it is observed that the 2019 Tariff Regulations provide for tax recovery by way of grossing up of Return on Equity (ROE) with effective tax rate; or the Minimum Alternate Tax (MAT) in case of a generating company or transmission licensee, as the case may be, paying MAT, of

the respective financial year. Further, no income, other than generation/ transmission activities, is considered for the purpose of tax recovery. In the present case, ROE is allowed for grossing up with MAT rate, as envisaged under the 2019 Tariff Regulations. It is further observed that the implementation of Ind AS has an accounting treatment implication and does not result in income from generation business activity. Similar claim of the Petitioner for the 2014-19 tariff period has been disallowed in this order. Accordingly, the prayer of the Petitioner for the 2019-24 tariff period, to allow the recovery of additional tax liability on increased income due to implementation of Ind AS is not allowed.

Annual Fixed Charges

321. Accordingly, the annual fixed charges approved for the generating station for the 2019-24 tariff period are summarized as under:

(Rs. in lakh)

	2019-20	**2020-21**	**2021-22**	**2022-23**	**2023-24**
Return on Equity	27109.00	29153.01	31044.64	31005.56	30994.24
Interest on Loan	14094.35	14216.55	14014.45	11573.71	9133.87
Depreciation	24588.73	26492.50	28243.13	28223.66	28223.56
O & M Expenses	26373.72	27463.83	28611.06	29817.26	31082.31
Interest on Working Capital	8912.61	8424.18	7949.95	7969.34	7992.01
Annual Fixed Charges	**101078.41**	**105750.08**	**109863.23**	**108589.54**	**107425.98**

Note: (1) All figures are on annualised basis. (2) All figures under each head have been rounded. The figure in total column in each year is also rounded. As such the sum of individual items may not be equal to the arithmetic total of the column.

322. As stated in paragraph 294 above, the Ash disposal expenses allowed are as below:

(Rs. in lakh)

2019-20	**2020-21**	**2021-22**	**2022-23**	**2023-24**	**Total**
3425.52	3416.16	3416.16	3416.16	3425.52	17099.52

323. The annual fixed charges determined as above are subject to truing-up in terms of Regulation 13 of the 2019 Tariff Regulations.

Energy Charge Rate (ECR)

324. As stated above, the Petitioner has claimed Energy Charge Rate (ECR) of 281.01 paise/kWh based on the weighted average price, GCV of coal & Oil procured and burnt for the preceding three months i.e. October 2018 to December 2018. The Petitioner did not subtract 85 kCal/kg from Weighted Average Gross calorific value of coal as received, on account of variation during storage at generating station, provided in Regulation 43(2)(b) of the 2019 Tariff Regulations, while computing the IWC and the energy charge rate. The Commission has adjusted the same in accordance with the Regulation 43(2)(b) of 2019 tariff regulations. ECR worked out, based on the operational norms specified under the 2019 Tariff Regulations and on 'as received' GCV of coal for the preceding 3 months i.e. October 2018 to December 2018, is given below:

Description	Unit	2019-24
Capacity	MW	1050
Gross Station Heat Rate	Kcal/kWh	2326.03
Aux. Energy Consumption	%	6.25
Weighted average GCV of oil	Kcal/lit	9100
Weighted average GCV of Coal *	Kcal/kg	**3999.16** (4084.16 - 85)
Weighted average price of oil	Rs/KL	48292.22
Weighted average price of Coal	Rs/MT	**4530.33**
Rate of energy charge ex-bus	Rs/kWh	2.831

325. The Fuel component and Energy charges allowed in working capital are as under:

(Rs. in lakh)

Year	2019-20 and 2023-24	2020-21 to 2022-23
Cost of Coal for stock (20 days)	11266.15	11266.15
Cost of Coal for Generation (30 days)	16899.22	16899.22
Cost of Secondary fuel oil 2 months	315.50	314.64
Energy charges for 45 days	25582.51	25582.51

326. There is variation between the Coal cost, Secondary fuel oil cost and Energy charges considered and allowed as above towards Interest on Working Capital as against those claimed by the Petitioner. This is attributable to the variation between the values of SHR, GCV and the Cost of coal and Secondary fuel claimed by the

Petitioner and considered and allowed by the Commission. As regards the variation in the Secondary fuel oil, the price and GCV of HFO only (as per consistent methodology adopted) has been considered after excluding the quantity in stock, while the Petitioner had considered the combined cost and GCV of LDO and HFO, including the stock. Similarly, the GCV and landed price of coal, has been arrived at after excluding the stock of coal, whereas, the Petitioner had included the stock of coal. The fuel quantity in stock has been excluded to arrive at the exact value of landed price and GCV of fuel procured during the three months from October 2018 to December 2018, as stipulated under the 2019 Tariff Regulations.

327. The Petitioner, on a month to month basis, shall compute and claim Energy Charges from the beneficiaries based on the formulae given under Regulation 43 of the 2019 Tariff Regulations.

Application Filing Fees and Publication Expenses

328. The Petitioner has also sought reimbursement of fees paid by it for the 2019-24 tariff period for filing the tariff petition and the publication expenses incurred for the same. The Petitioner shall be entitled for reimbursement of the filing fees and publication expenses in connection with the present petition, directly from the beneficiaries on pro-rata basis in accordance with Regulation 70(1) of the 2019 Tariff Regulations.

Summary

329. The annual fixed charges allowed for the 2014-19 tariff period (after truing-up) is as under:

(Rs. in lakh)

2014-15	2015-16	2016-17	2017-18	2018-19
103521.74	104906.37	103399.96	100487.66	99726.57

330. The annual fixed charges approved for the 2019-24 tariff period is as under:

(Rs. in lakh)

2019-20	2020-21	2021-22	2022-23	2023-24
101078.41	105750.08	109863.23	108589.54	107425.98

331. Petition No. 408/GT/2020 is disposed of in terms of the above.

ORDER

Petition No. 408/GT/2020 was filed by the Review Petitioner, Maithon Power Limited for truing-up of tariff of Maithon Right Bank Thermal Power Project (1050 MW) (in short 'the generating station') for the 2014-19 tariff period in terms of the 2014 Tariff Regulations and for determination of tariff of the generating station for the 2019-24 tariff period in terms of the 2019 Tariff Regulations and the Commission vide its order dated 8.1.2022 (in short 'the impugned order') disposed of the said petition. Aggrieved by the impugned order dated 8.1.2022, the Review Petitioner has filed this Review Petition seeking review on the ground that there are errors apparent on the face of record, on the following issues:

(A) Disallowance of the following expenditure incurred/ proposed to be incurred for the enhancement of security at the generating station:

(i) Expenditure incurred for construction of Gate House/Security Infra/E-Security for the period 2014-19 and proposed to be incurred for the period 2019-24;

(ii) Expenditure to be incurred for the installation of CCTV camera for 2020-21 to 2022-23;

(iii) Expenditure to be incurred for automation of Boom Barrier for 2020-21;

(B) Wrongful disallowance of relaxation of Station Heat Rate for the period 2019-24; and

(C) Disallowance of Normative IDC on Capital Works in Progress.

Hearing dated 29.3.2022

2. The Review Petition was heard on 'admission' through 'video conferencing' on 29.3.2022. During the hearing, the learned counsel for the Review Petitioner made detailed oral submissions in the matter and prayed that the Review Petition may be allowed on the grounds raised in paragraph 1 above. The Commission, after hearing the learned counsel for the Review Petitioner, reserved its order on 'admissibility' of the Review Petition. Thereafter, by interim order dated 23.5.2022, the Review Petition was 'admitted' on the grounds [A(i) to A(iii)] in paragraph 1 above, and the prayers with regard to issues (B) and (C) above, were rejected. However, in the said order, liberty was granted to the Review Petitioner, to raise issues with regard to certain computational errors pertaining to the approval of additional capitalization schemes and segregation of approved schemes under the head 'within the original scope or beyond original scope' for determination of 'return on equity' as per the 2019 Tariff Regulations, with proper justification, at the time of truing-up of tariff of the generating station for the 2019-24 tariff period. The parties were accordingly granted time to complete their pleadings, prior to the next date of hearing.

Hearing dated 12.8.2022

3. During the hearing, the learned counsel for the Review Petitioner referred to the IB report and made detailed oral submissions with regard to the additional capital expenditure proposed/incurred towards the (i) Construction of gate house/security infra/e-security for the periods 2014-19 and 2019-24; (ii) Automation of Boom Barrier for 2020-21 and for (iii) Installation of CCTV camera during 2020-21 to 2022-23, which was disallowed by order dated 8.1.2022. He further submitted that since the additional capital expenditure proposed/incurred was based on the report of IB, Ministry of Home Affairs, which was enclosed to the main petition, the claim of the Review Petitioner

may be allowed. None appeared on behalf of the Respondents. Accordingly, the Commission reserved its order in the matter.

4. Thus, the following issues are being examined in the present case.

> *(A) Expenditure incurred for construction of Gate House/Security Infra/E-Security for the period 2014-19 and proposed to be incurred for the period 2019-24;*
>
> *(B) Expenditure to be incurred for the installation of CCTV camera for 2020-21 to 2022-23*
>
> *(C) Expenditure to be incurred for automation of Boom Barrier for 2020-21;*

5. Since the aforesaid issues relate to the additional capitalization of expenditure incurred/ projected to be incurred, on account of enhancement of safety at the generating station, the same are clubbed and examined below, based on the submissions and documents available on record.

A. Expenditure incurred for construction of Gate House/Security Infra/E-Security for the period 2014-19 and proposed to be incurred for the period 2019-24:

6. The Commission in the impugned order dated 8.1.2022 has observed the following:

> *"82……. Admittedly, the additional capital expenditures claimed by the Petitioner is beyond the original scope of work of the project and is after the cut-off date. The Petitioner's submission that the additional capitalization has been incurred is on account of Force Majeure events and the same may be allowed in exercise of the power to relax is not acceptable, as the submissions made by the Petitioner do not demonstrate the existence of any force majeure events. Alternatively, the prayer of the Petitioner to allow the said claim under Regulation 14(3)(iii) of the 2014 Tariff Regulations is also not acceptable, as the Petitioner has not furnished any documentary evidence indicating that the expenditure incurred is for higher security or safety of plant as advised or is based on the directions of the Appropriate Governmental agencies or Statutory authorities responsible for national/ internal security. In view of this, the additional capitalization claimed by the Petitioner under this head is not allowed*
>
> *xxx*
>
> *239. The Petitioner has not established through documentary evidence that the additional capital expenditure is required to be incurred based on the advice or direction of any Indian Government Instrumentality or statutory authorities. In the absence of any justification, the claim of the Petitioner for additional capitalization of Rs.120.70 lakh in 2019-20 for Gate house near JNT, Rs.248.99 lakh (Rs.148.99 lakh in 2019-20 and Rs.100.00 lakh in 2020-21) for E-security system and Rs.300.00 lakh in 2019-20 for Construction of high-rise safety platform and walkways is not allowed."*

7. The Review Petitioner has submitted the following:

(a) An additional Gate house near JNT equipped with turnstile gates and the strengthening of the E- security system for the main gate, labor gate, and the plant premises became imminent. These turnstiles have dual authentication, the first being an access card and the second being biometric. Two boom barriers, one for the entry road and the other for the exit road, have been built. For automated gate operation, a RFID system has also been installed.

(b) The construction of this gate complex has facilitated streamlined entry and exit of workers in and around the plant area, avoiding villagers trespassing; defined two-wheeler parking slot with arrangement of frisking, scanning of workmen's belongings, clearly defined route map for entry and exit.

(c) Therefore, in view of the above, ACE of Rs. 4.01 crores for the period of 2016-19 was incurred under Regulation 14 (3) (iii) of the 2014 Tariff Regulations and ACE of Rs 3.69 crore was proposed for the period of 2019-20 and 2020-21 under Regulation 26 (1) (d) of the 2019 Tariff Regulations for JNT/Gate house/E-security.

B. Expenditure to be incurred for the installation of CCTV camera for 2020-21 to 2022-23

8. The Commission in the impugned order dated 8.1.2022 has observed the following:

> *"231. The Petitioner has not established through documentary evidence that the additional capital expenditure is required to be incurred based on the advice or direction of any Indian Government Instrumentality or statutory authorities. In the absence of any justification, the claim of the Petitioner for additional capitalization of Rs.550.00 lakh during the period 2020-23 for this asset / work is not allowed."*

Submissions of the Review Petitioner

9. The Review Petitioner has submitted the following:

(a) There are 48 CCTV cameras installed for the monitoring of the premises of the generating station, the same has also been mentioned in the IB report dated 10.01.2019. Though there is no specific recommendation on installing additional CCTV, but it did not bar the Review Petitioner from reviewing the sufficiency of CCTV cameras in its generating station in the light of threat perception indicated in the IB report.

(b) There were less than 300 security guards for a huge premise extending over more than 1100 acres. Therefore, installation of additional CCTV cameras all over the generating station was necessary to avert any unwanted incidents and to monitor the activities of people in and around plant.

(c) The Commission in its various orders/ judgements have allowed the expenses incurred due to installation of CCTV based on the recommendations of IB. (Ref.

order dated 8.8.2016 in 219/GT/2014 – NTPC vs APCCC and order dated 4.2.2014 in Petition No. 137/GT/2013 (NTPC vs APPTCL)

(d) Therefore, the Review Petitioner has proposed the expense of Rs. 5.50 crores (Rs 2 crores in 2020-21, Rs 2 crores in 2021-22 and Rs 1.5. crores in 2022-23) towards installation of CCTV cameras to be incurred in a phased manner under the Regulation 26(1)(d) of the 2019 Tariff Regulations.

C. Expenditure to be incurred for automation of Boom Barrier for 2020-21*;*

10. The Commission in the impugned order dated 8.1.2022 had observed the following:

"229. Regulation 26(1)(d) of the 2019 Tariff Regulations provides for capitalization of additional expenditure (projected or incurred) required for higher security and safety of the plant as advised or directed by appropriate Indian Government Instrumentality or statutory authorities responsible for national or internal security. The Petitioner, in this case, has not established through documentary evidence that the additional capital expenditure is required to be incurred based on the advice or direction of any Indian Government Instrumentality or statutory authorities. In the absence of any justification, the claim of the Petitioner for additional capitalization of Rs.20.00 lakh in 2020-21 is not allowed."

Submissions of the Review Petitioner

11. The Review Petitioner has submitted the following:

(a) The automatic Boom Barrier can be used to successfully control pedestrian and vehicle traffic and achieve better security.

(b) The same is required to effectively manage and address the security concerns raised by the IB. Therefore, the additional capital expenditure of Rs. 0.2. crore was proposed for 2020-21 under Regulation 26(1)(d) of the Tariff Regulations 2019 for 'automation of Boom Barrier'.

Analysis and decision

12. We have examined the matter and perused the IB report. The Review Petitioner had claimed total additional capital expenditure towards Gate house near JNT/ Security infra/ E-security for Rs. 4.01 crore during the period 2016-19, under Regulation 14(3)(iii) of the 2014 Tariff Regulations and total additional capital expenditure for Rs. 3.69 crore during the period 2019-21, under Regulation 26(1)(d) of the 2019 Tariff Regulations. Similarly, the Review Petitioner had also claimed the projected additional capital expenditure of Rs. 5.50 crore towards Installation of CCTV

cameras during the period 2020-22, under Regulation 26(1)(d) of the 2019 Tariff Regulations and Rs.20.00 lakh towards Automatic Boom Barrier in 2020-21 under Regulation 26(1)(d) of the 2019 Tariff Regulations. The Review Petitioner is mainly aggrieved with the disallowance of the aforesaid additional capital expenditure which were incurred during the period 2016-19 and proposed to be incurred during the period 2019-24, towards enhancement of security measures based on the IB report dated 10.1. 2019.

13. On perusal of the IB report, we notice that several recommendations have been made with regard to physical security, access control, cyber security etc., related to the plant premises. Also, certain specific recommendations have been made in the said report, with directions to the Review Petitioner to initiate and implement the same. The report also captures the threat assessment to the premises/plant of the Review Petitioner. It is also noticed that there has been a security audit of the generating station of the Review Petitioner, during November, 2018. It is in this background, that the Review Petitioner, in order to enhance the security of the premises /plant, had sought the additional capitalization of the aforesaid items/assets. Even otherwise, the Review Petitioner has not been barred from reviewing and enhancing the security related aspects of its generating station, mainly, in the light of the threat perception, indicated in the IB report. In our view, the additional capital expenditure claimed in respect of the aforesaid assets is only a culmination of preliminary instructions given to officers of the Review Petitioner (security audit), during November, 2018, by the IB and its report dated 10.1.2019. Moreover, the installation of these assets is essential for surveillance and safety of the generating station particularly considering its location and the threat assessment to the premises/plant. These aspects, were inadvertently not considered at the time of

passing the impugned order 8.1.2022. The non-consideration of the same, according to us, is an error apparent on the face of the record and review on this count is maintainable. Accordingly, the additional capitalization claimed by the Review Petitioner, in respect of the items/assets (as mentioned in para 12 above) for the period 2016-19 and for the period 2019-24, are admissible and accordingly allowed. Issues (A), (B) and (C) are disposed of as above.

14. Consequent upon the additional capital expenditure towards Gate house near JNT/ Security infra/ E-security for Rs. 4.01 crore during the period 2016-19, being allowed in this order, as above, under Regulation 14(3)(iii) of the 2014 Tariff Regulations, the tariff in respect of the generating station for the period 2014-19 is required to be corrected/modified, as stated in the subsequent paragraphs:

Revision of tariff for the 2014-19 tariff period

15. The tariff of this generating station, which was trued-up for the period 2014-19 vide impugned order dated 8.1.2022, stands revised, as under:

Additional capital expenditure allowed

16. The additional capital expenditure allowed in the table under paragraph 101 of the order dated 8.1.2022 is modified as under:

(Rs in lakh)

** Note: The Cumulative Depreciation at the end of 2013-14 is Rs. 47164.35 lakh.*

Interest on Working Capital

Working capital for Receivables

24. The Receivables equivalent to two months of capacity charges and two months of energy charges towards working capital in the table under paragraph 163 of order dated 8.1.2022 stands revised as under:

(Rs in lakh)

	2014-15	2015-16	2016-17	2017-18	2018-19
Fixed charges-for two months	17253.62	17484.40	17234.02	16750.71	16628.99
Energy Charges-for two months	21074.50	21103.97	21074.50	21582.30	21582.30

25. Accordingly, the interest on working capital as computed in the table under paragraph 165 of the order dated 8.1.2022 stands revised as under:

(Rs in lakh)

	2014-15	2015-16	2016-17	2017-18	2018-19
Cost of coal for stock- 1 month	10458.70	10487.35	10458.70	10710.71	10710.71
Cost of coal for generation- 1 month	10315.43	10315.43	10315.43	10563.99	10563.99
O&M expenses – 1 month	1478.85	1571.38	1669.15	1765.51	1865.89
Cost of secondary fuel oil – 2 months	300.37	301.19	300.37	307.60	307.60
Maintenance spares	3549.24	3771.31	4005.96	4237.22	4478.13
Receivables (Fixed charges -2 months)	17253.62	17484.40	17234.02	16750.71	16628.99
Receivables (Variable charges -2 months)	21074.50	21103.97	21074.50	21582.30	21582.30
Total	**64430.71**	**65035.02**	**65058.13**	**65918.04**	**66137.60**
Rate of Interest	13.50%	13.50%	13.50%	13.50%	13.50%
Interest on Working Capital	**8698.15**	**8779.73**	**8782.85**	**8898.93**	**8928.58**

Annual Fixed Charges

26. Based on the above, the annual fixed charges approved for the generating station for the period 2014-19 in the table under paragraph 166 stands modified/ revised as under:

(Rs in lakh)

	2014-15	2015-16	2016-17	2017-18	2018-19
Return on Equity	26333.62	27727.29	28077.66	28107.82	28311.41
Interest on Loan	27957.86	25842.46	22563.45	18337.45	15969.11
Depreciation	22785.93	23700.34	23950.33	23973.95	24174.21
O&M Expenses	17746.18	18856.55	20029.82	21186.09	22390.63
Interest on Working Capital	8698.15	8779.73	8782.85	8898.93	8928.58
Total	**103521.74**	**104906.37**	**103404.10**	**100504.25**	**99773.94**

27. The annual fixed charges allowed in order dated 1.10.2019 in Petition No.152/GT/2015 and those allowed by this order (as in paragraph 168 of order date 8.1.2022) is revised as under:

(Rs in lakh)

Total annual fixed charges allowed in order dated 1.10.2019	99154.50	106314.26	107868.34	106552.83	111287.93
Total annual fixed charges allowed in this order	103521.74	104906.37	103404.10	100504.25	99773.94

Revision of tariff for the 2019-24 tariff period

28. The closing capital cost of Rs.479376.83 lakh as on 31.3.2019 as allowed in this order, will be considered as the opening capital cost as on 1.4.2019 for the period 2019-24 at the time of truing up. Further, the projected additional capital expenditure of Rs. 5.50 crore towards Installation of CCTV cameras during the period 2020-22, under Regulation 26(1)(d) of the 2019 Tariff Regulations and Rs.20.00 lakh towards Automatic Boom Barrier in 2020-21 under Regulation 26(1)(d) of the 2019 Tariff Regulations, as allowed in paragraph 13 of this order, shall however be considered, at the time of truing up of tariff for the period 2019-24, subject to the Review Petitioner furnishing all relevant details/documents, in support of the actual expenditure incurred.

29. Review Petition No. 4/RP/2022 in Petition No. 408/GT/2020 is disposed of in terms of the above.

Amount of Gross Loan drawn upto 31.03.2019/COD 3,4,5,13,15						
Interest Type6						
Fixed Interest Rate, if applicable						
Base Rate, if Floating Interest7						
Margin, if Floating Interest8						
Are there any Caps/Floor9						
If above is yes, specify caps/floor						
Moratorium Period10						
Moratorium effective from						
Repayment Period11						
Repayment effective from						
Repayment Frequency12						
Repayment Instalment13,14						
Base Exchange Rate16						
Are foreign currency loan hedged?						
If above is yes, specify details17						
Name of the Projects						
Project 1						
Project 2						
Project 3 and so on						

NOT APPLICABLE

Note:

1. Source of loan means the agency from whom the loan has been taken such as WB, ADB, WMB, PNB, SBI, ICICI, IFC, PFC etc.
2. Currency refers to currency of loan such as US$, DM, Yen, Indian Rupee etc.
3. Details are to be submitted as on 31.03.2019 for existing assets and as on COD for the remaining assets.
4. Where the loan has been refinanced, details in the Form is to be given for the loan refinanced. However, the details of the original loan is to be given separately in the same form.
5. If the Tariff in the petition is claimed separately for various units, details in the Form is to be given separately for all the units in the same form.
6. Interest type means whether the interest is fixed or floating.
7. Base rate means the base as PLR, MCLR, LIBOR etc. over which the margin is to be added. Applicable base rate on different dates from the date of drawl may also be enclosed.
8. Margin means the points over and above the floating rate.
9. At times caps/floor are put at which the floating rates are frozen. If such a condition exists, specify the limits.
10. Moratorium period refers to the period during which loan servicing liability is not required.
11. Repayment period means the repayment of loan such as 7 years, 10 years, 25 years etc.

MAITHON POWER LIMITED

Details of Allocation of corporate loans to various projects

Name of the Petitioner	**Maithon Power Limited**	**FORM- 8**
Name of the Generating Station	**1050 MW Maithon Project**	

Particulars	Package1	Package2	Package3	Package4	Package5	Remarks
1	2	3	4	5	6	7

12. Repayment frequency means the interval at which the debt servicing is to be done such as monthly, quarterly, half-yearly, annual, etc.

13. Where there is more than one drawl/repayment for a loan, the date & amount of each drawl/repayment may also be given separately

14. If the repayment installment amount and repayment date cannot be worked out from the data furnished above, the repayment schedule to be furnished separately.

15. In case of Foreign loan, date of each drawl & repayment along with exchange rate at that date may be given.

16. Base Exchange Rate means the exchange rate prevailing as on 31.03.2019 or COD, whichever is later

17. In case of hedging, specify details like type of hedging, period of hedging, cost of hedging, etc.

18. In case of foreign loans, provide details of exchange rate considered on date of each repayment of principal and date of interest payment.

19. At the time of truing up rate of interest with relevant reset date (if any) to be furnished separately

20. At the time of truing up provide details of refinancing of loans considered earlier. Details such as date on which refinancing done, amount of refinanced loan, terms and conditions of refinanced loan, financing and other charges incurred for refinancing etc.

Name of the Petitioner: Maithon Power Limited
Name of the Generating Station: 1050 MW Maithon Project
For Financial year: 2022 -23

Amount in Rs Lakhs

Sl. No.	Details of Capital Spares and Expenses Name of Spare	2022-23 Amount	Claimed as a part of additional	Funded through Compensatory	Funded through Special Allowance (If Applicable)	Claimed as a part of stores and spares	Justification
163	2000001776_IDCT FAN GEAR BOX ITEM NAME: SHAFT, TYPE/USED: OUTPUT, GENERAL NOTE: PREMIUM, EQUIPMENT NOTE: GEARBOX IDCT	7.04	No	No	No	No	IDCT Gearbox are in continuous operation since commissioning of both the units i.e. from last 11 years. It's overhauling was planned in phased manner. During overhauling, output shaft of Gearbox was found damaged due to ageing. That's why, it was replaced with a spare one in Capital stock.
164	2000006141_BOILER WATER WALLS ITEM NAME: PANEL, TYPE, USED: FRONT; GENERAL NOTE: WITH WALL SLEEVE BEND TUBE, RIFLED, PASS I	6.33	No	No	No	No	Erosion in water walls are always on higher side due to flue gas erosion. That's why, these panels were replaced after inspection during last annual overhauling.
165	2000009353_AIR PRE HEATER GEAR BOX ITEM NAME: PIN, TYPE/USED: RACK, EQUIPMENT: AIR PREHEATER	4.13	No	No	No	No	Air Pre-Heater are in continuous operation since commissioning of both the units i.e. from last 11 years. Pin rack was dound damaged due to ageing. That's why, it was replaced with a spare one in Capital stock.
166	2000009561_FD FAN LUBE OIL PUMP ITEM NAME: VALVE, TYPE/USED: PRESSURE RELIEF, EQUIPMENT: FORCED DRAFT FAN	1.13	No	No	No	No	FD Fan Pressure Relief Valve are installed for more than 11 years. During overhauling, it was tested and it was not working properly. Since, it's a risk to plant, machinery and manpower.That's why, it was replaced with a spare one in Capital stock.
167	2000010004_MDBFP VOITH COUPLING ITEM NAME: BEARING, PART NO: 0071/0010, SUB EQUIPMENT: HYDRAULIC COUPLING, MODEL: R18KGS	2.93	No	No	No	No	These bearings are in continuous operation since commissioning of the Units i.e for more than 11 years. Due to gaeing, these bearings failed & was immediately replaced with a spare one in stock.
168	2000010005_MDBFP VOITH COUPLING ITEM NAME: BEARING, TYPE/USED: FOUR LOBE, PART NO: 0071/0020, EQUIPMENT: HYDRAULIC COUPLING, EQUIPMENT MODEL: R18KGS	3.69	No	No	No	No	MDBFP and it's auxiliaries are in continuous operation since commissioning of both the units i.e. from last 11 years. MDBFP Voith Coupling overhauling was done for the first time. During inspection, it was obserbed that lobes, thrust bearing assembly & it's pump assembly need to be replaced due to ageing. That's why, these spares were replaced with spare ones in Capital stock.
169	2000010009_MDBFP VOITH COUPLING ITEM NAME: BEARING, TYPE/USED: FOUR LOBE, PART NO: 0071/0030, EQUIPMENT: HYDRAULIC COUPLING, EQUIPMENT MODEL: R18KGS	3.02	No	No	No	No	MDBFP and it's auxiliaries are in continuous operation since commissioning of both the units i.e. from last 11 years. MDBFP Voith Coupling overhauling was done for the first time. During inspection, it was obserbed that lobes, thrust bearing assembly & it's pump assembly need to be replaced due to ageing. That's why, these spares were replaced with spare ones in Capital stock.
170	2000010010_MDBFP VOITH COUPLING ITEM NAME: SHELL BEARING, PART NO: 0071/0040, EQUIPMENT: HYDRAULIC COUPLING, EQUIPMENT MODEL: R18KGS	2.87	No	No	No	No	These bearings are in continuous operation since commissioning of the Units i.e for more than 11 years. Due to gaeing, these bearings failed & was immediately replaced with a spare one in stock.
171	2000010011_MDBFP VOITH COUPLING ITEM NAME: BEARING, TYPE/USED: THRUST, PART NO: 0071/0050, EQUIPMENT: HYDRAULIC COUPLING, EQUIPMENT MODEL: R18KGS	4.32	No	No	No	No	MDBFP and it's auxiliaries are in continuous operation since commissioning of both the units i.e. from last 11 years. MDBFP Voith Coupling overhauling was done for the first time. During inspection, it was obserbed that lobes, thrust bearing assembly & it's pump assembly need to be replaced due to ageing. That's why, these spares were replaced with spare ones in Capital stock.
172	2000010099_MDBFP VOITH COUPLING ITEM NAME: PUMP, TYPE/USED: START LUBE, PART NO: 500/0010, EQUIPMENT: HYDRAULIC COUPLING, EQUIPMENT MODEL: R18KGS	8.49	No	No	No	No	MDBFP and it's auxiliaries are in continuous operation since commissioning of both the units i.e. from last 11 years. MDBFP Voith Coupling overhauling was done for the first time. During inspection, it was obserbed that lobes, thrust bearing assembly & it's pump assembly need to be replaced due to ageing. That's why, these spares were replaced with spare ones in Capital stock.

265	2000187319_BTG INSTRUMENT AIR COMPRESSOR GEAR PINION SET,NH265,P.N.A410077,	3.08	No	No	No	No	6 nos of BTG Instrument Air & Service Air Compressors are in continuous operation since commissioning of both the units i.e. from last 11 years. During overhauling of compressor, it was observed that teeths of gear pinion set are not properly aligning due toi erosion of gear teeth. This happened due to ageing. That's why, it was replaced with a spare one in Capital stock
266	2000187321_MILL REJECT COMPRESSOR GEAR_PINION,SET GROUP,NE 135,P.N.-A990146,	1.86	No	No	No	No	2 nos of Mill Reject Compressors are in continuous operation since commissioning of both the units i.e. from last 11 years. During overhauling of compressor, it was observed that teeths of gear pinion set are not properly aligning due toi erosion of gear teeth. This happened due to ageing. That's why, it was replaced with a spare one in Capital stock
267	2000188310_PRIMARY WATER FILTER FILTER ELEMENT FOR PRIMARY WATER SYSTEM,TYPE- 1.53.1.270.750 DN100,FABNO-3884423/4P,MAKE-BOLL <(>&<)> KIRCH FILTERBAU GMBH D50170 KE	11.89	No	No	No	No	Primary Water Filters were getting chocked frequently. After cleaning also, results were not upto the mark. That's why, both PW filters were replaced with a spare ones in Capital stock.
268	2000188311_TDBFP (MAIN PMP) FLEXIBLE COUPLING BETWEEN TURBINE REAR BFP. TYPE-8GBH-200-S,MAKE-EUROFLEX-DRAWING NO: 08287-00, BHEL DRAWING NO: 2-303-02-00	18.68	No	No	No	No	4 nos of TDBFPs are in continuous operation since commissioning of both the units i.e. from last 11 years. That's why, their phased wose overhauling was planned. During inspection of TDBFP Drive Turbine, Main Pump & Booster Pump in last Annual Overhauling of Unit#2, couling between Main Pump & Drive turbine was found damaged due to ageing. That's why, it was replaced with a spare one in Capital stock.
269	2000190288_ESP PASS#A,B,C,D Inlet GD screen-Primary,MOC-IS 2062 (2mm Sheet)	3.45	No	No	No	No	ESP and it's auxiliaries are in continuous operation since commissioning of both the units i.e. from last 11 years. Spares of ESP are getting older day by day & fly as erosion is also increasing day by day. That's why in every overhauling, their thorough inspection is being done. During last overhauling, it was observed that Gas Distributor scren have eroded beyond repair and needs replacement due to flue gas erosion. That's why, these spares were replaced with a spare one in Capital stock.
270	2000193554_INTERMEDIATE SILO#2 K PUMP#3 DISPENSING VESSEL TANK,K PUMP,MB8411D,70/110/250	6.70	No	No	No	No	Intermediate Silos are used to store Fly Ash from ESP. Thenafter, through K Pump Fly Ash is transferred from IM Silo to Main silo. Internals of Tranfer Vessel & Dispensing vessel were eroded, that's why these were replaced with new one available in Capital stock due to fly ash erosion.
271	2000193555_INTERMEDIATE SILO#2 K PUMP#3 TRANSFER VESSEL TANK,MB8410D,K PUMP,70/110/250	4.49	No	No	No	No	Intermediate Silos are used to store Fly Ash from ESP. Thenafter, through K Pump Fly Ash is transferred from IM Silo to Main silo. Internals of Tranfer Vessel & Dispensing vessel were eroded, that's why these were replaced with new one available in Capital stock due to fly ash erosion.
272	2000194713_HP Control Fluid Oil Vapour Exhaust Fan CONTROL FLUID VAPOUR EXHAUSTER WITH MOTOR.Make: Air Link Engineering Pvt Ltd. Type: AMSL, Size: 10, Sl. No:01210 024, Mfg. Date:	1.19	No	No	No	No	HP Control Fluid Oil Vapour Exhaust Fan are in continuous operation since commissioning of both the units i.e. from last 11 years. During it's overhauling, it was observed that fan, casing , shaft and bearings are damaged due to ageing. That's why, it was replaced with a spare one in Capital stock.

Name of the Generating Station: 1050 MW Maithon Project
For Financial year: 2023 -24

Amount in Rs Lakhs

Sl. No.	Details of Capital Spares and Expenses Name of Spare	2023-24 Amount	Claimed as a part of additional	Funded through Compensatory	Funded through Special Allowance (If Applicable)	Claimed as a part of stores and spares	Justification
21	3000018372_BTG SERVICE AIR COMPRESSOR FDR CABLE, ARMOURED; MATERIAL, CONDUCTOR: ALUMINIUM, VOLTAGE RATING: 1.1 KV, CORE: 3 C, CORE CROSS SECTION: 240 MM2, MATERIAL, INSUL	9.68	No	No	No	No	BTG Service Air Compressors and their electrical systems are in continuous operation since commissioning of both the units i.e. from last 11 years. 1.1KV cable and auxiliary cable strated failing due to overheat & ageing. That's why, it was replaced with a spare one in Capital stock.
22	3000018376_BTG INSTRUMENT AIR COMPRESSOR FDR CABLE, ARMOURED; MATERIAL, CONDUCTOR: ALUMINIUM, VOLTAGE RATING: 1.1 KV,CORE: 3 C, CORE CROSS SECTION: 35 MM2, MATERIAL, OUTER S	4.38	No	No	No	No	BTG Instrument Air Compressors and their electrical systems are in continuous operation since commissioning of both the units i.e. from last 11 years. 1.1KV cable strated failing due to overheat & ageing. That's why, it was replaced with a spare one in Capital stock.
23	3000018856_BTG SERVICE AIR COMPRESSOR FDR CABLE, ARMOURED; TYPE: INSTRUMENT, MATERIAL, CONDUCTOR: COPPER, CORE: 6 P, CORE CROSS SECTION: 0.5 MM2, MATERIAL, INSULATION: PV	4.13	No	No	No	No	BTG Service Air Compressors and their electrical systems are in continuous operation since commissioning of both the units i.e. from last 11 years. 1.1KV cable and auxiliary cable strated failing due to overheat & ageing. That's why, it was replaced with a spare one in Capital stock.
24	2000122211_IMPELLER OF COOLING WATER PUMP REF. NO.#B060, SL. NO.(PART NO.)# 10, MOC# CF8, DRAWING NO.# SK-7438-C, REV.# 01, WPIL REF. NO.# IBE-3456-61(I)	81.84	No	No	No	No	CW Pumps are in service since commissioning of both the units i.e. for more than 11 years. While inspection CW Pump during it's overhauling, it was observed that impeller & suction bells were having pitting & dents marks. Impeller & suction bell were replaced with the spare ones available in Capital Stock.
25	2000129092_SERVOMOTOR ASSEMBLY FOR PA FAN, MAKE- BHEL	56.23	No	No	No	No	PA Fans are operational since commissioning of both the Units i.e for more than 11 years. Due to ageing, servomotors detoriated. We have also faced generation loss due to PA Fan Servomotor assembly link connecting rod and connecting piece failure. That's why, during last overhauling, servomotors of PA Fan were replaced with spare one available in Capital Stock.
26	2000129177_ELECTRONIC CARD FOR ID FAN LCI SYSTEM-MDL 660HPTKA DS3800HPTK	5.31	No	No	No	No	Electronic Card of ID fan LCI Drive is most important part of LCI System. We faced back to back failure of electronic cards due to malfuction of internal components like resistor/transistor. Unavailability of Electronic Cards may lead to partial generation loss. So, their immediate replacement was planned to avoid generation loass. Electronic Card was replaced with the spare card available in Capital Stock.

MAITHON POWER LIMITED

Details/Information to be Submitted in respect of Capital Spares

Name of the Petitioner: Maithon Power Limited
Name of the Generating Station: 1050 MW Maithon Project
For Financial year: 2023 -24

Amount in Rs Lakhs

Sl. No.	Details of Capital Spares and Expenses Name of Spare	2023-24 Amount	Claimed as a part of additional	Funded through Compensatory	Funded through Special Allowance (If Applicable)	Claimed as a part of stores and spares	Justification
27	2000161432_COOLER,RADIATOR FOR MAIN SILO COMPRESSORS, P.N.-1903031311, MAKE-CHICAGO PNEUMATICS	1.90	No	No	No	No	Chicago Pneumatics make Reciproicating Compressor of Main silo Compressed Air System are in continuous operation since commissioning of the Units i.e for more than 11 years. These compressors are for conveying & unlaoding ash from main silo. Compressor was tripping on higher air exit temperature. During inspection, it was observed thatthere is leak from raditor of compressor. Radiator cools down the cooling water of compressor & due to it's internal tube leakage, compressor was not available. This confirmed that radiator needs to be replaced. So, radiator was replaced withspare one available in Capital Stock.
28	2000161435_COOLER,AIR FOR MAIN SILO COMPRESSORS, P.N.-1903618311, MAKE-CHICAGO PNEUMATICS	3.07	No	No	No	No	Chicago Pneumatics make Reciproicating Compressor of Main silo Compressed Air System are in continuous operation since commissioning of the Units i.e for more than 11 years. These compressors are for conveying & unlaoding ash from main silo. Compressor was tripping on higher air exit temperature. During inspection, it was observed that there is leakfrom air cooler of compressor. Air cooler cools down the compressed air & due to it's internal tube leakage, compressor was not available. This confirmed that air cooler needs to be replaced. So, air cooler was replaced with spare one available in Capital Stock.
29	2000161451_CYLINDER ASSEMBLY, HP SIDE FOR MAIN SILO COMPRESSORS,P.N.-1903909395, MAKE-CHICAGO PNEUMATICS	2.60	No	No	No	No	Chicago Pneumatics make Reciproicating Compressor of Main silo Compressed Air System are in continuous operation since commissioning of the Units i.e for more than 11 years. These compressors are for conveying & unlaoding ash from main silo. Compressor discharge pressure was low & abnormal sound was also observed from HP side. During inspection, it was observed HP Cylinder linings have eroded. This confirmed that HP Cylinder Assembly needs to be replaced. So, HP Cylinder was replaced with spare one available in Capital Stock.
30	2000012763_VARIABLE DISPLACEMENT PUMP FOR PADDLE FEEDER, MAKE: BRUEININ-GHAUS, MODEL: DCINA 4VG56, EP2DM1/32 R-NZC02 F006D	8.35	No	No	No	No	Variable Displacement Pump is that main equipment of Paddle Feeder Hydraulic Power Rack System. Paddle feeder is operational since commissioning of the Units i.e for more than 11 years. Due to the fatigue load of Paddle Feeder, this pump failed & immediate replacement was required or else we would have to bear geneartion loss. So, Pump was replaced with new Pump assembly in Capital Stock.

Ring Granulators are prone to erosion & failures. During inspection of RG#1, it was observed that breaker plates have erorded & needs replacement. So, Breaker Plate was replaced with new gearbox assembly in Capital Stock.
37	2000001705_SUCTION BELL OF CW PUMP, REF. NO.#B150, SR. NO.(PART NO.)-06,MOC-.CI. FG260, MAKE: WORTHINGTON PUMPS, EQUIPMENT: CW PUMP, EQUIPMENT MODEL: 72HMT, SINGLE STAGE VERTICAL TURBINE PUMP, DRAWING NO.#SK-7438-C, REV.-01, WPIL REF. NO. IBE-3456-61(I)	50.28	No	No	No	No	CW Pumps are in service since commissioning of both the units i.e. for more than 11 years. While inspection CW Pump during it's overhauling, it was observed that impeller & suction bells were having pitting & dents marks. Impeller & suction bell were replaced with the spare ones available in Capital Stock.
38	2000009971_MDBFP SCOOP CONTROLLER, ELECTRONIC; POWER SUPPLY: 50/160 W, MOUNTING: VERTICAL; MODEL: EAS822, MAKE: ABB; GENERAL NOTE: CONTRAC, YEAR2009, ELECTRONIK/ELECTRONICS, VOLTAGE: 94-130 V, FREQUENCY: 50HZ	19.63	No	No	No	No	MDBFP Scoop Controller is very critical in its application, which is used to control the speed of MDBFP motor by regulating scoop tube position in voith tank through scoop actuator. This scoop controller is installed in MDBFP and it is operational since commissioning of both the units. During FY'23 Unit#1 Annual Overhauling, spare electronics unit controller was consumed.
39	1000017677_ANALYSER DUST/OPACITY MONITOR, TRANSMISSOMETER MODEL- LAND 4500 MKIII UK,MAKE- LAND AMETAK,4-20 MA & RS-485 PORT OUTPUT	4.90	No	No	No	No	Analyser is installed in the SPM Analyser at Stack of the units as a statutory requirement. Analyser started malfunctioning due to it's ageing. Since, it is a statutory requirement. Analyser was replaced with the spare one in Capital Stock.
40	2000129607_SOLENOID COILS & VALVES FOR MAIN TURBINE & TDBFP, MAKE:IMI-NORGREN	16.58	No	No	No	No	Critical control circuit like ESV reset and operation, ATT system and protection circuits uses solenoid operation. It is very crucial to ensure the availability of these SOVs for equipment protection and failure of these SOVs will impact equipment safety as well as lead to generation loss. Most of the SOVs which are now in service are in operation since commissioning period and exceeded over 12 years of service. But as per OEM (IMI-Norgren), the service life of these SOVs isforalteast 5 years and recommended to replace them after 5 years to safeguard the equipment and plant operation. The installed SOVs already exceeded double the service life. That's why, it was replaced with new one.

TARIFF FILING FORMS (THERMAL)

FOR DETERMINATION OF TARIFF

FOR

Maithon Power Limited

(From 01.04.2024 to 31.03.2029)

Check list

Form No.	Title of Tariff Filing Forms (Thermal)	Tick
FORM- 1	Summary of Tariff	√
FORM -1 (I)	Statement showing claimed capital cost	√
FORM -1 (II)	Statement showing Return on Equity	√
FORM-2	Plant Characteristics	√
FORM-3	Normative parameters considered for tariff computations	√
FORM- 4	Details of Foreign loans	NA
FORM- 4A	Details of Foreign Equity	NA
FORM-5	Abstract of Admitted Capital Cost for the existing Projects	NA
FORM- 6	Financial Package upto COD	NA
FORM- 7	Details of Project Specific Loans	NA
FORM- 8	Details of Allocation of corporate loans to various projects	NA
FORM-9	Statement of Additional Capitalisation after COD	√
FORM- 10	Financing of Additional Capitalisation	√
FORM- 11	Calculation of Depreciation on original project cost	NA
FORM- 12	Statement of Depreciation	√
FORM- 13	Calculation of Weighted Average Rate of Interest on Actual Loans	NA
FORM- 14	Draw Down Schedule for Calculation of IDC & Financing Charges	NA
FORM- 15	Details of Fuel for Computation of Energy Charges	√
FORM- 16	Details of Limestone for Computation of Energy Charge Rate	NA
FORM-17	Details of Capital Spares	√
FORM- 18	Non-Tariff Income	NA
FORM-19	Details of Water Charges	√
FORM-20	Details of Statutory Charges	NA

PART-I

List of Supporting Forms / documents for tariff filing for Thermal Stations

Form No.	Title of Tariff Filing Forms (Thermal)	Tick
FORM-A	Abstract of Capital Cost Estimates	**NA**
FORM-B	Break-up of Capital Cost for Coal/Lignite based projects	**NA**
FORM-C	Break-up of Capital Cost for Gas/Liquid fuel based Projects	**NA**
FORM-D	Break-up of Construction/Supply/Service packages	**NA**
FORM-E	Details of variables , parameters , optional package etc. for New Project	**NA**
FORM-F	Details of cost over run	**NA**
FORM-G	Details of time over run	**NA**
FORM –H	Statement of Additional Capitalisation during end of the useful life	**NA**
FORM –I	Details of Assets De-capitalised during the period	√
FORM –J	Reconciliation of Capitalisation claimed vis-à-vis books of accounts	**NA**
FORM –K	Statement showing details of items/assets/works claimed under Exclusions	**NA**
FORM-L	Statement of Capital cost	**NA**
FORM-M	Statement of Capital Woks in Progress	**NA**
FORM-N	Calculation of Interest on Normative Loan	√
FORM-O	Calculation of Interest on Working Capital	√
FORM-P	Incidental Expenditure up to SCOD and up to Actual COD	**NA**
FORM-Q	Expenditure under different packages up to SCOD and up to Actual COD	**NA**
FORM-R	Actual cash expenditure	**NA**
FORM-S	Statement of Liability flow	**NA**
FORM-T	Summary of issues involved in the petition	**NA**

Summary of Tariff **Form-1**

Name of the Petitioner	Maithon Power Limited
Name of the Generating Station	1050 MW Maithon Project
Place	Dhanbad

Sr No.	Particulars	Unit	Existing 2023-24	2024-25	2025-26	2026-27	2027-28	2028-29

1.2	Interest on Loan	Rs. Lakh		8855.54	7916.25	6801.23	5899.73	4841.27
1.3	Return of Equity	Rs. Lakh		31993.97	32412.00	32731.28	33235.97	33712.01
1.4	Interest on Working Capital	Rs. Lakh		9218.15	9287.65	9395.49	9514.17	9601.97
1.5	O&M Expenses	Rs. Lakh		42445.27	42486.26	45181.79	46832.09	47368.09
1.6	Special Allowance (if applicable)	Rs. Lakh						
	Total	**Rs. Lakh**		**109020.79**	**109292.10**	**111907.45**	**114355.67**	**115590.26**
2	Primary Fuel							
2.1	Landed Fuel Cost (coal/gas/RLNG/liquid) as per FSA approved by the beneficiaries	Rs./Ton		NA				
	(%) of Fuel Quantity	(%)						
2.2	Landed Fuel Cost (coal from Integrated mine) as per FSA, if any, approved by benficiaries or as per allocation of coal quantity	Rs./Ton		NA				
	(%) of Fuel Quantity	(%)						
2.3	Landed Fuel Cost Imported Coal as per FSA approved by beneficiaries	Rs./Ton		NA				
	(%) of Fuel Quantity	(%)						
2.4	Landed Fuel Cost (coal/gas/RLNG/liquid) other than FSA	Rs./Ton		NA				
	(%) of Fuel Quantity	(%)						
2.5	Landed Fuel Cost Imported Coal other tha	Rs./Ton		NA				
	(%) of Fuel Quantity	(%)						
3	Secondary Fuel							
3.1	Secondary Fuel Cost	Rs./Unit		0.03	0.03	0.03	0.03	0.03
	Energy Charge Rate ex-bus (Paise/kWh)	Rs./Unit		2.847	2.847	2.847	2.847	2.847

Note:

1. Details of calculations, considering equity as per regulation to be furnished.

2A. If multi fuel is used simultaneously, give 2 in respect of every fuel individually

2B. The rate of energy charge shall be computed for open cycle operation and combined cycle operation separately in case of gas/liquid fuel fired plants.

2C. The total energy charge shall be worked out based on ex-bus energy scheduled to be sent out.

2D. The Energy Charge rate for the month shall be based on fuel cost(s) and GCV(s) for the month as per Regulation 43.

2E. In case breakup is not available for 2.1 to 2.5, consolidated statement needs to be submitted.

Type of Cooling Tower	Induced Draught Type	Induced Draught Type
Type of cooling system[5]	Re-circulation type	Re-circulation type
Type of Boiler Feed Pump[6]	Two Turbine-driven BFP & One Motor-driven BFP	Two Turbine-driven BFP & One Motor-driven BFP
Fuel Details[7]		
-Primary Fuel	Coal	Coal
-Secondary Fuel	Light Diesel Oil & Heavy Furnace Oil	Light Diesel Oil & Heavy Furnace Oil
-Alternate Fuels		
Types of SOX control system		
Types of NOX control system		
Details of SPM control system		
Special Features/Site Specific Features[8]		
Special Technological Features[9]		
Environmental Regulation related features[10]		
Any other special features		

1. At Turbine MCR condition.
2: with 0% (Nil) make up and design Cooling water temperature
3: at TMCR output based on gross generation, 0% (Nil) makeup and design Cooling water temperature.
4: With Performance coal based on Higher Heating Value (HHV) of fuel and at BMCR) out put
5: Closed circuit cooling, once through cooling, sea cooling, natural draft cooling, induced draft cooling etc.
6: Motor driven, Steam turbine driven etc.
7: Coal or natural gas or Naptha or lignite etc.
8: Any site specific feature such as Merry-Go-Round, Vicinity to sea, Intake /makeup water systems etc. scrubbers etc. Specify all such features
9: Any Special Technological feature like Advanced class FA technology in Gas Turbines, etc.
10: Environmental Regulation related features like FGD, ESP etc.,
Note 1: In case of deviation from specified conditions in Regulation, correction curve of manufacturer may also be submitted.
Note 2: Heat Balance Diagram has to be submitted along with above information in case of new stations.
Note 3: The Terms – MCR, BMCR, HHV, Performance coal, are as defined in CEA Technical Standards for Construction of Electric Plants and Electric Lines Regulations – 2010 notified by the Central Electricity Authority
Note 4: The copy of Certificate shall be submitted in terms of Regulation 4 as per Appendix-VI

Note:

1. Illustration: Say Rs. 80 Cr. + US$ 200 m or Rs. 1680 Cr. including US$ 200 m at an exchange rate of US$=Rs 80
2. Provide details on commercial operation as on COD of each Unit
3. For example: US $ 200m, etc.

Details of Project Specific loans

Form-7

Name of the Petitioner	Maithon Power Limited
Name of the Generating Station	1050 MW Maithon Project

Particulars	Package1	Package2	Package3	Package4	Package5	Package6
1	2	3	4	5	6	7
Source of Loan	NOT APPLICABLE					
Currency						
Amount of Loan sanctioned						
Amount of Gross Loan drawn upto 31.03.2024/COD						
Interest Type						
Fixed Interest Rate, if applicable						
Base Rate, if Floating Interest						
Margin, if Floating Interest						
Are there any Caps/Floor						
If above is yes, specify caps/floor						
Moratorium Period						
Moratorium effective from						
Repayment Period						
Repayment effective from						
Repayment Frequency						
Repayment Instalment						
Base Exchange Rate						
Are foreign currency loan hedged?						
If above is yes, specify details						

Note:

1. Source of loan means the agency from whom the loan has been taken such as WB, ADB, WMB, PNB, SBI, ICICI, IFC, PFC etc.
2. Currency refers to currency of loan such as US$, DM, Yen, Indian Rupee etc.
3. Details are to be submitted as on 31.03.2024 for existing assets and as on COD for the remaining assets.
4. Where the loan has been refinanced, details in the Form is to be given for the loan refinanced. However, the details of the original loan is to be given separately in the same form.
5. If the Tariff in the petition is claimed separately for various units, details in the Form is to be given separately for all the units in the same form.
6. Interest type means whether the interest is fixed or floating.
7. Base rate means the base as PLR, MCLR, LIBOR etc. over which the margin is to be added. Applicable base rate on different dates from the date of drawl may also be enclosed.
8. Margin means the points over and above the floating rate.
9. At times caps/floor are put at which the floating rates are frozen. If such a condition exists, specify the limits.
10. Moratorium period refers to the period during which loan servicing liability is not required.
11. Repayment period means the repayment of loan such as 7 years, 10 years, 25 years etc.
12. Repayment frequency means the interval at which the debt servicing is to be done such as monthly, quarterly, half yearly, annual, etc.
13. Where there is more than one drawl/repayment for a loan, the date & amount of each drawl/repayment may also be given separately
14. If the repayment installment amount and repayment date cannot be worked out from the data furnished above, the repayment schedule to be furnished separately.
15. In case of Foreign loan, date of each drawl& repayment along with exchange rate at that date may be given.
16. Base exchange rate means the exchange rate prevailing as on 31.03.2024 or COD, whichever is later
17. In case of hedging, specify details like type of hedging, period of hedging, cost of hedging, etc.
18. In case of foreign loans, provide details of exchange rate considered on date of each repayment of principal and date of interest payment.
19. At the time of truing up rate of interest with relevant reset date (if any) to be furnished separately
20. At the time of truing up provide details of refinancing of loans considered earlier. Details such as date on which refinancing done, amount of refinanced loan, terms and conditions of refinanced loan, financing and other charges incurred for refinancing, etc.

1. In case the project has been completed and cost has already been admitted under any tariff notification(s) in the past, fill column 9 giving the cost as admitted for the purpose of tariff notification already issued by (Name of the authority) (Enclose copy of the Tariff Order).

2. The above information needs to be furnished separately for each year / period of tariff period 2024-29.

3. In case of de-capitalisation of assets separate details to be furnished at column 1, 2, 3 and 4. Further, the original book value and year of capitalisation of such asset to be furnished at column 8. Where de-caps are on estimated basis the same to be shown separately.

4. Where any asset is rendered unserviceable the same shall be treated as de-capitalised during that year and original value of such asset to be shown at col. 3. and impaired value if any, year of its capitalisation to be mentioned at column 8.

5. Justification against each asset of capitalization should be specific to regulations under which claim has been made and the necessity of capitalization of that particular asset.

6. The Petitioner to submit the list of individual items along with quantum and individual costs claimed as ACE.

Note:

1. Fill the form in chronological order year wise along with detailed justification clearly bringing out the necessity and the benefits accruing to the beneficiaries.

2. In case initial spares are purchased along with any equipment, then the cost of such spares should be indicated separately. e.g. Rotor - 50 Crs. Initial spares- 5 Crs

Not Applicable

Note:

1. Drawl of debt and equity shall be on pari-passu basis quarter wise to meet the commissioning schedule. Drawl of higher equity in the beginning is permissible. IDC on normative loan corresponding to excess equity over 30% of funds deployed shall be allowed only in case the actual infusion of equity on a pari-passu basis is more than 30% of total funds deployed and shall be computed on quarterly basis.
2. Applicable interest rates including reset dates used for above computation may be furnished separately

3. In case of multi unit project details of capitalization ratio used to be furnished.

4. In case IDC on normative loan is to be allowed prior to infusion of actual loan, rate of interest for computing such IDC shall be equal to 1-year SBI MCLR as prevailing on 1st April of the respective year. IDC on normative loan, post infusion of actual loan shall be computed based on WAROI for that respective quarter.

MAITHON POWER LIMITED

Details of Capital Spares **Form-17**

Name of the Petitioner	Maithon Power Limited
Name of the Generating Station	1050 MW Maithon Project

S. No.	Deatails of Capital Spares and Expenses	2024-25	Claimed a s a part of additional Capitalization	Funded through compensatory allowance (If Applicable)	Funded through Special Allowance	Claimed as a part of stores and spares
	Name of Spare	**Amount in Rs. Lakh**				
1	400 KV Switchyard	25				
2	Crusher Rotor Assembly	0				
3	Procurement of Condensate Extraction Pump Rotor Assembly	0				
4	Procurement of Standby CW Pump and Motor	0				
5	FD Fan Rotor Assembly	0				
6	ID Fan Rotor Assembly	0				
7	Cooling Tower Internals	200				
8	IP Turbine Blades Replacement	900				
9	PA Fan Rotor Assembly	0				
10	Procurement of TDBFP Drive Turbine Rotor Assembly	0				
11	Boiler Circulating Water Pump Assembly	800				
12	Procurement of L T Breaker & Relays	100				
13	Turbine Bearing set procurement	261.01				
14	LTSH Coil Assembly	950				
15	Procurement of Upgraded Coal burner Tip & Nozzle	0				
16	Procurement of Sky Climber components and spares	0				
17	ID Fan and VFD Transformer	50				
18	Replenishment of Capital Spares	675.61				
	Total	**3961.62**				

1) No Spares individually costing upto Rs. 10 lakh shall be claimed.
2) Spares that have been procured in the past through compensatory allowance to be provided.

MAITHON POWER LIMITED

Details of Capital Spares

Form-17

Name of the Petitioner	Maithon Power Limited
Name of the Generating Station	1050 MW Maithon Project

S. No.	Deatails of Capital Spares and Expenses	2025-26	Claimed as a part of additional Capitalization	Funded through compensatory allowance (If Applicable)	Funded through Special Allowance	Claimed as a part of stores and spares
	Name of Spare	**Amount in Rs. Lakh**				
1	400 KV Switchyard	25.00				
2	Crusher Rotor Assembly	200.00				
3	Procurement of Condensate Extraction Pump Rotor Assembly	0.00				
4	Procurement of Standby CW Pump and Motor	0.00				
5	FD Fan Rotor Assembly	300.00				
6	ID Fan Rotor Assembly	0.00				
7	Cooling Tower Internals	200.00				
8	IP Turbine Blades Replacement	0.00				
9	PA Fan Rotor Assembly	0.00				
10	Procurement of TDBFP Drive Turbine Rotor Assembly	0.00				
11	Boiler Circulating Water Pump Assembly	0.00				
12	Procurement of LT Breaker & Relays	100.00				
13	Turbine Bearing set procurement	0.00				
14	LTSH Coil Assembly	550.00				
15	Procurement of Upgraded Coal burner Tip & Nozzle	0.00				
16	Procurement of Sky Climber components and spares	0.00				
17	ID Fan and VFD Transformer	50.00				
18	Replenishment of Capital Spares	0.00				
	Total	**1425.00**				

1) No Spares individually costing upto Rs. 10 lakh shall be claimed.
2) Spares that have been procured in the past through compensatory allowance to be provided.

Details of Capital Spares **Form-17**

Name of the Petitioner	Maithon Power Limited
Name of the Generating Station	1050 MW Maithon Project

S. No.	Deatails of Capital Spares and Expenses	2026-27	Claimed as a part of additional Capitalization	Funded through compensatory allowance (If Applicable)	Funded through Special Allowance	Claimed as a part of stores and spares

1) No Spares individually costing upto Rs. 10 lakh shall be claimed.
2) Spares that have been procured in the past through compensatory allowance to be provided.

Details of Water Charges

Form-19

Name of the Petitioner	Maithon Power Limited
Name of the Generating Station	1050 MW Maithon Project

S. No.	Details of Water charges (excluding water cess)		Quantity Allocated	Projected Water Consumption			Normative Consumption at 85% PLF	Rate specified (as per govt. notification or agreement	Spillage of water (in percentage)	Amount Claimed
	Name of Source and quantity	Amount	Unit	Plant		Total	m3	Rs/m3		Rs Lakhs
FY 25	DVC			19486825			27364050	17.14		3339.22
FY 26	DVC			19486825			27364050	18.85		3673.15
FY 27	DVC			19486825			27364050	20.73		4040.46
FY 28	DVC			19540214			27439020	22.81		4456.68
FY 29	DVC			19486825			27364050	25.09		4888.96

Note-1: The water charges shall include only the expenditure paid to the third party/Govt. entity for water consumed for the generation of electricity only, exclusive of expenses associated with the owner i.e. manpower, pumping charges etc.

Note-2: The supporting documents with regard to the rate specified by the Govt. entity shall be submitted

MAITHON POWER LIMITED

Details of Assets De-capitalised during the period

Assumptions :

1) Ash Generation Considered at 85% PLF.
2) Ash production is based on 41.35% of coal consumption
3) Ash % in coal has been assumed as 41.35% as an average of FY 20 to FY 24
4) Cost effective Utilization has been taken as below considering the additional capitalisation of Ash Wharf in FY 24-25 and Ash Silos in FY29:

	Of 80% Fly Ash	Bottom Ash
FY 25	56%	21%
FY 26	60%	25%
FY 27	60%	25%
FY 28	60%	25%
FY 29	65%	30%

Balance of Fly Ash and Bottom Ash is being disposed off for filling Void mines and low lying areas to meet 100% ash utilisation target

5) Moisture % included in the quantity as Fly Ash -8%, Bottom Ash -33% and Pond Ash -27% based on past data
6) Ash Disposal Rate (Rs/MT) Considered is as per prevailing Rate for FY 24-25 for disposable distance of about 41 km as below:

Ash Disposal rate for Fly Ash - 353, Bottom Ash - 353 and Pond Ash -362 as per prevailing rate for FY 24-25 and with price escallation of 5% at every 2 year starting from FY 25-26.

7) Opening Pond Ash stock as on 1.4.2024 = 238884/0.73=327238 MT
8) Rake Handling Charges is considered at rate of Rs 168.93/Mt for pond Ash and Rs. 153/Mt for FLY Ash as per prevailing rate for FY 24-25 and with price escallation of 5% at every 2 year starting from FY 25-26

9) Subsidy of Rs. 100/Mt and Revenue of Rs. 110/Mt has been considered for offtake of Pond Ash and Fly Ash respectively in Rake mode as per prevailing rate for FY 24-25.

10)With commissioning of Ash Silos for loading, the net rate of disposal of FLY Ash in Rake mode has been considered as -Rs 50/Mt from FY 2028-29 onwards

INDEPENDENT AUDITOR'S REPORT

To the Members of Maithon Power Limited

Report on the Audit of the Ind AS Financial Statements

Opinion

We have audited the accompanying Ind AS financial statements of Maithon Power Limited ("the Company"), which comprise the Balance sheet as at March 31 2020, the Statement of Profit and Loss, including the statement of Other Comprehensive Income, the Cash Flow Statement and the Statement of Changes in Equity for the year then ended, and notes to the Ind AS financial statements, including a summary of significant accounting policies and other explanatory information.

In our opinion and to the best of our information and according to the explanations given to us, the aforesaid Ind AS financial statements give the information required by the Companies Act, 2013, as amended ("the Act") in the manner so required and give a true and fair view in conformity with the accounting principles generally accepted in India, of the state of affairs of the Company as at March 31, 2020, its profit including other comprehensive income, its cash flows and the changes in equity for the year ended on that date.

Basis for Opinion

We conducted our audit of the Ind AS financial statements in accordance with the Standards on Auditing (SAs), as specified under section 143(10) of the Act. Our responsibilities under those Standards are further described in the 'Auditor's Responsibilities for the Audit of the Ind AS Financial Statements' section of our report. We are independent of the Company in accordance with the 'Code of Ethics' issued by the Institute of Chartered Accountants of India together with the ethical requirements that are relevant to our audit of the financial statements under the provisions of the Act and the Rules thereunder, and we have fulfilled our other ethical responsibilities in accordance with these requirements and the Code of Ethics. We believe that the audit evidence we have obtained is sufficient and appropriate to provide a basis for our audit opinion on the Ind AS financial statements.

Key Audit Matters

Key audit matters are those matters that, in our professional judgment, were of most significance in our audit of the Ind AS financial statements for the financial year ended March 31, 2020. These matters were addressed in the context of our audit of the Ind AS financial statements as a whole, and in forming our opinion thereon, and we do not provide a separate opinion on these matters. For each matter below, our description of how our audit addressed the matter is provided in that context.

We have determined the matters described below to be the key audit matters to be communicated in our report. We have fulfilled the responsibilities described in the Auditor's responsibilities for the audit of the Ind AS financial statements section of our report, including in relation to these matters. Accordingly, our audit included the performance of procedures designed to respond to our assessment of the risks of material misstatement of the Ind AS financial statements. The results of our audit procedures, including the procedures performed to address the matters below, provide the basis for our audit opinion on the accompanying Ind AS financial statements.

S.R. Batliboi & Co. LLP Kolkata

Key audit matters	How our audit addressed the key audit matter
Accrual of Recoverable from Beneficiaries/Payable to Beneficiaries for items which are subject matter of true up in tariff orders *(as described in note 10 and note 21 of the Ind AS financial statements)*	
The Company's revenue recognition is guided by the tariff norms prescribed by the Central Electricity Regulatory Commission (CERC) guidelines and the tariff orders passed based on these regulations. Consequently, Recoverable from Beneficiaries/Payable to Beneficiaries is recognized for items which are subject matter of true up in tariff orders to be notified in future years. Judgement is exercised by management in estimating recoverability / payability of such other assets and liabilities in the books. As on 31st March 2020, the Company is carrying an amount of Rs. 135.20 crores as Payable to Beneficiaries (Net of Recoverable from Beneficiaries of Rs 200.06 crores) which is material to the financial statements of the Company. Considering the judgements involved in the estimates of various elements of capital and operational costs used in the computation of revenue as per applicable regulations and the amount involved we have determined this to be a key audit matter.	Following procedures have been performed to address this key audit matter:- 1. We have tested the design and operating effectiveness of key controls related to the valuation and recoverability of such Recoverable from Beneficiaries/Payable to Beneficiaries. 2. We have evaluated the estimation by management of recognition of these Recoverable from Beneficiaries/Payable to Beneficiaries with reference to Tariff Regulations and the tariff orders of earlier years on similar matters and also the underlying records of the Company. 3. We also evaluated the True-up orders passed by CERC during the year on certain balances of Recoverable from Beneficiaries/Payable to Beneficiaries to determine the consistency and appropriateness of principles applied by the Company in determining and measuring these Other assets and liabilities. 4. We discussed with management to understand their assessment on each of the qualitative factors and ensured consistency of the management's explanation with the underlying documentation, rules and regulations. 5. We have re-calculated the workings obtained from the management to check the arithmetical accuracy of the calculations. 6. We have also checked the adequacy of the disclosure on these matters in the financial statements of the Company.
Recoverability of MAT Credit Entitlement in future *(as described in note 20d of the Ind AS financial statements)*	
The Company does not have taxable income owing to unabsorbed depreciation and benefits of section 80IA of Income Tax Act, 1961 and therefore it has been paying. Minimum Alternate Tax (MAT) under the relevant provisions of the Income Tax Act, 1961. The Act also provides that	Following procedures have been performed to address this key audit matter:- 1. We have tested the design and operating effectiveness of key controls related to the computation and recognition of such MAT credit. 2. We have assessed the methodology applied by the Company with current accounting standards and

S.R. Batliboi & Co. LLP Kolkata

Key audit matters	How our audit addressed the key audit matter
such MAT paid can be carried forward (MAT credit entitlement) for set off against regular tax payable in subsequent fifteen years period. Such MAT credit entitlements are recognized when it is probable that normal taxable profit will be available against which these MAT credits can be utilized. The Company's ability to recognize these MAT credit assets is assessed by management at the end of each reporting period, taking into account forecasts of future taxable profits and the law and jurisdiction of the land in force. The assumptions on these projections are determined by management. At March 31, 2020, MAT credit entitlement recognized in the Company's financial statements amounts to Rs. 369.39 crores. Given the degree of judgment involved in making a forecast of the profitability of the Company and the materiality of the amounts involved, we considered this to be a key audit matter.	applicable taxation laws along with the future business forecast of taxable profits. 3. We have assessed the likelihood of the Company to utilize the available MAT credit entitlements in the future with underlying projections and assumptions relating to future estimated profits, future capitalization and depreciation allowance thereon and future estimates of taxable income. 4. We have tested the arithmetical accuracy of the future taxability workings prepared by the management. We have also checked the adequacy of the disclosure on these matters in the financial statements of the Company.

We have determined that there are no other key audit matters to communicate in our report.

Information Other than the Financial Statements and Auditor's Report Thereon

The Company's Board of Directors is responsible for the other information. The other information comprises the information included in the Annual report, but does not include the Ind AS financial statements and our auditor's report thereon.

Our opinion on the Ind AS financial statements does not cover the other information and we do not express any form of assurance conclusion thereon.

In connection with our audit of the Ind AS financial statements, our responsibility is to read the other information and, in doing so, consider whether such other information is materially inconsistent with the financial statements or our knowledge obtained in the audit or otherwise appears to be materially misstated. If, based on the work we have performed, we conclude that there is a material misstatement of this other information, we are required to report that fact. We have nothing to report in this regard.

S R Batliboi & Co. LLP Kolkata

Responsibilities of Management for the Ind AS Financial Statements

The Company's Board of Directors is responsible for the matters stated in section 134(5) of the Act with respect to the preparation of these Ind AS financial statements that give a true and fair view of the financial position, financial performance including other comprehensive income, cash flows and changes in equity of the Company in accordance with the accounting principles generally accepted in India, including the Indian Accounting Standards (Ind AS) specified under section 133 of the Act read with the Companies (Indian Accounting Standards) Rules, 2015, as amended. This responsibility also includes maintenance of adequate accounting records in accordance with the provisions of the Act for safeguarding of the assets of the Company and for preventing and detecting frauds and other irregularities; selection and application of appropriate accounting policies; making judgments and estimates that are reasonable and prudent; and the design, implementation and maintenance of adequate internal financial controls, that were operating effectively for ensuring the accuracy and completeness of the accounting records, relevant to the preparation and presentation of the Ind AS financial statements that give a true and fair view and are free from material misstatement, whether due to fraud or error.

In preparing the Ind AS financial statements, management is responsible for assessing the Company's ability to continue as a going concern, disclosing, as applicable, matters related to going concern and using the going concern basis of accounting unless management either intends to liquidate the Company or to cease operations, or has no realistic alternative but to do so.

Those Board of Directors are also responsible for overseeing the Company's financial reporting process.

Auditor's Responsibilities for the Audit of the Ind AS Financial Statements

Our objectives are to obtain reasonable assurance about whether the Ind AS financial statements as a whole are free from material misstatement, whether due to fraud or error, and to issue an auditor's report that includes our opinion. Reasonable assurance is a high level of assurance, but is not a guarantee that an audit conducted in accordance with SAs will always detect a material misstatement when it exists. Misstatements can arise from fraud or error and are considered material if, individually or in the aggregate, they could reasonably be expected to influence the economic decisions of users taken on the basis of these Ind AS financial statements.

As part of an audit in accordance with SAs, we exercise professional judgment and maintain professional skepticism throughout the audit. We also:

- Identify and assess the risks of material misstatement of the Ind AS financial statements, whether due to fraud or error, design and perform audit procedures responsive to those risks, and obtain audit evidence that is sufficient and appropriate to provide a basis for our opinion. The risk of not detecting a material misstatement resulting from fraud is higher than for one resulting from error, as fraud may involve collusion, forgery, intentional omissions, misrepresentations, or the override of internal control.
- Obtain an understanding of internal control relevant to the audit in order to design audit procedures that are appropriate in the circumstances. Under section 143(3)(i) of the Act, we are also responsible for expressing our opinion on whether the Company has adequate internal financial controls with reference to financial statements in place and the operating effectiveness of such controls.
- Evaluate the appropriateness of accounting policies used and the reasonableness of accounting estimates and related disclosures made by management.

S R Batliboi & Co. LLP Kolkata

- Conclude on the appropriateness of management's use of the going concern basis of accounting and, based on the audit evidence obtained, whether a material uncertainty exists related to events or conditions that may cast significant doubt on the Company's ability to continue as a going concern. If we conclude that a material uncertainty exists, we are required to draw attention in our auditor's report to the related disclosures in the financial statements or, if such disclosures are inadequate, to modify our opinion. Our conclusions are based on the audit evidence obtained up to the date of our auditor's report. However, future events or conditions may cause the Company to cease to continue as a going concern.
- Evaluate the overall presentation, structure and content of the Ind AS financial statements, including the disclosures, and whether the Ind AS financial statements represent the underlying transactions and events in a manner that achieves fair presentation.

We communicate with those charged with governance regarding, among other matters, the planned scope and timing of the audit and significant audit findings, including any significant deficiencies in internal control that we identify during our audit.

We also provide those charged with governance with a statement that we have complied with relevant ethical requirements regarding independence, and to communicate with them all relationships and other matters that may reasonably be thought to bear on our independence, and where applicable, related safeguards.

From the matters communicated with those charged with governance, we determine those matters that were of most significance in the audit of the Ind AS financial statements for the financial year ended March 31, 2020 and are therefore the key audit matters. We describe these matters in our auditor's report unless law or regulation precludes public disclosure about the matter or when, in extremely rare circumstances, we determine that a matter should not be communicated in our report because the adverse consequences of doing so would reasonably be expected to outweigh the public interest benefits of such communication.

Report on Other Legal and Regulatory Requirements

1. As required by the Companies (Auditor's Report) Order, 2016 ("the Order"), issued by the Central Government of India in terms of sub-section (11) of section 143 of the Act, we give in the "Annexure 1" a statement on the matters specified in paragraphs 3 and 4 of the Order.
2. As required by Section 143(3) of the Act, we report that:

   (a) We have sought and obtained all the information and explanations which to the best of our knowledge and belief were necessary for the purposes of our audit;

   (b) In our opinion, proper books of account as required by law have been kept by the Company so far as it appears from our examination of those books;

   (c) The Balance Sheet, the Statement of Profit and Loss including the Statement of Other Comprehensive Income, the Cash Flow Statement and Statement of Changes in Equity dealt with by this Report are in agreement with the books of account;

   (d) In our opinion, the aforesaid Ind AS financial statements comply with the Accounting Standards specified under Section 133 of the Act, read with Companies (Indian Accounting Standards) Rules, 2015, as amended;

S.R. Batliboi & Co. LLP Kolkata

(e) On the basis of the written representations received from the directors as on March 31, 2020 taken on record by the Board of Directors, none of the directors is disqualified as on March 31, 2020 from being appointed as a director in terms of Section 164 (2) of the Act;

(f) With respect to the adequacy of the internal financial controls over financial reporting of the Company with reference to these Ind AS financial statements and the operating effectiveness of such controls, refer to our separate Report in "Annexure 2" to this report;

(g) In our opinion, the managerial remuneration for the year ended March 31, 2020 has been paid / provided by the Company to its directors in accordance with the provisions of section 197 read with Schedule V to the Act;

(h) With respect to the other matters to be included in the Auditor's Report in accordance with Rule 11 of the Companies (Audit and Auditors) Rules, 2014, as amended in our opinion and to the best of our information and according to the explanations given to us:

i. The Company has disclosed the impact of pending litigations on its financial position in its Ind AS financial statements - Refer Note 32 to the Ind AS financial statements;

ii. The Company did not have any long-term contracts including derivative contracts for which there were any material foreseeable losses;

iii. There were no amounts which were required to be transferred to the Investor Education and Protection Fund by the Company.

"ANNEXURE 1" TO THE INDEPENDENT AUDITOR'S REPORT OF EVEN DATE ON THE FINANCIAL STATEMENTS OF MAITHON POWER LIMTED

(i)

(a) The Company has maintained proper records showing full particulars, including quantitative details and situation of fixed assets.

(b) All fixed assets have not been physically verified by the management during the year but there is a regular programme of verification which, in our opinion, is reasonable having regard to the size of the Company and the nature of its assets. No material discrepancies were noticed on such verification.

(c) According to the information and explanation given to us and the records examined by us and based on the examination of the registered sale deed/transfer deed/conveyance deed provided to us, we report that, the title deeds, comprising of all the immovable properties of land which are freehold, are in the name of the Company as at the balance sheet date, except the following:

Type of Land	Area	Amount in crores	Remarks
Raiyati Land (Free hold) located at Maithon, Jharkhand.	564.67 acres	159.80	The title deed to the Private land is in the name of Damodar Valley Corporation (DVC). Pending transfer of title as per the shareholders agreement, the Company had entered into an Indenture deed with DVC on 5 December, 2008, which provided inter-alia, lease of private land for a period of 35 years (and extendable for another 35 years at the option of the Company).
Railway Land (Freehold Land) located at Maithon, Jharkhand.	66.74 acres	137.12	The title deed to the Private land is in the name of Damodar Valley Corporation (DVC). As required by the shareholders agreement, DVC is in the process of transferring title in these lands in favour of the Company as per applicable laws of the State of Jharkhand.

Further, the Company is also in possession of leasehold land amounting to Rs. 69.09 crores, the original title deeds whereof could not be verified by us in view of nationwide lockdown consequent to the Coronavirus pandemic, and hence we are unable to comment upon the same.

(ii) The management has conducted physical verification of inventory at reasonable intervals during the year and no material discrepancies were noticed on such physical verification.

S.R. Batliboi & Co. LLP Kolkata

(iii) According to the information and explanations given to us, the Company has not granted any loans, secured or unsecured to Companies, firms, Limited Liability Partnerships or other parties covered in the register maintained under section 189 of the Companies Act, 2013. Accordingly, the provisions of clause 3(iii)(a), (b) and (c) of the Order are not applicable to the Company and hence not commented upon.

(iv) In our opinion and according to the information and explanations given to us, there are no loans, investments, guarantees, and securities given in respect of which provisions of section 185 and 186 of the Companies Act 2013 are applicable and hence not commented upon.

(v) According to the information and explanation given to us the Company has not accepted any deposits within the meaning of Sections 73 to 76 of the Act and the Companies (Acceptance of Deposits) Rules, 2014 (as amended). Accordingly, the provisions of clause 3(v) of the Order are not applicable.

(vi) We have broadly reviewed the books of account maintained by the Company pursuant to the rules made by the Central Government for the maintenance of cost records under section 148(1) of the Companies Act, 2013, related to the generation of electricity, and are of the opinion that prima facie, the specified accounts and records have been made and maintained. We have not, however, made a detailed examination of the same.

(vii)

(a) The Company is regular in depositing with appropriate authorities undisputed statutory dues including provident fund, employees' state insurance, income-tax, sales-tax, service tax, duty of custom, duty of excise, value added tax, goods and service tax, cess and other statutory dues applicable to it.

(b) According to the information and explanations given to us, no undisputed amounts payable in respect of provident fund, employees' state insurance, income-tax, service tax, sales-tax, duty of custom, duty of excise, value added tax, goods and service tax, cess and other statutory dues were outstanding, at the year end, for a period of more than six months from the date they became payable.

(c) According to the information and explanations given to us, there are no dues of income tax, sales-tax, service tax, customs duty, excise duty, value added tax , goods and service tax and cess which have not been deposited on account of any dispute.

(viii) In our opinion and according to the information and explanations given to us by the management, the Company has not defaulted in repayment of loans or borrowing to a financial institution, bank or government or dues to debenture holders. The Company did not have any outstanding loans or borrowing in respect of financial institution and government.

(ix) According to the information and explanations given by the management, the Company has not raised any money by way of initial public offer / further public offer / debt instruments. The term loan have been applied for the purpose for which they were raised.

(x) Based upon the audit procedures performed for the purpose of reporting the true and fair view of the financial statements and according to the information and explanations given by

S.R. Batliboi & Co. LLP Kolkata

the management, we report that no fraud by the company or no fraud / material fraud on the Company by the officers and employees of the Company has been noticed or reported during the year.

(xi) According to the information and explanations given by the management, the managerial remuneration has been paid / provided in accordance with the requisite approvals mandated by the provisions of section 197 read with Schedule V to the Companies Act, 2013.

(xii) In our opinion, the Company is not a Nidhi company. Therefore, the provisions of clause 3(xii) of the order are not applicable to the Company and hence not commented upon.

(xiii) According to the information and explanations given by the management, transactions with the related parties are in compliance with section 177 and 188 of Companies Act, 2013 where applicable and the details have been disclosed in the notes to the financial statements, as required by the applicable accounting standards.

(xiv) According to the information and explanations given to us and on an overall examination of the balance sheet, the Company has not made any preferential allotment or private placement of shares or fully or partly convertible debentures during the year under review and hence, reporting requirements under clause 3(xiv) are not applicable to the company and, not commented upon.

(xv) According to the information and explanations given by the management, the Company has not entered into any non-cash transactions with directors or persons connected with him as referred to in section 192 of Companies Act, 2013.

(xvi) According to the information and explanations given to us, the provisions of section 45-IA of the Reserve Bank of India Act, 1934 are not applicable to the Company.

ANNEXURE 2 TO THE INDEPENDENT AUDITOR'S REPORT OF EVEN DATE ON THE IND AS FINANCIAL STATEMENTS OF MAITHON POWER LIMTED

Report on the Internal Financial Controls under Clause (i) of Sub-section 3 of Section 143 of the Companies Act, 2013 ("the Act")

We have audited the internal financial controls over financial reporting of Maithon Power Limited ("the Company") as of March 31, 2020 in conjunction with our audit of the Ind AS financial statements of the Company for the year ended on that date.

Management's Responsibility for Internal Financial Controls

The Company's Management is responsible for establishing and maintaining internal financial controls based on the internal control over financial reporting criteria established by the Company considering the essential components of internal control stated in the Guidance Note on Audit of Internal Financial Controls Over Financial Reporting issued by the Institute of Chartered Accountants of India. These responsibilities include the design, implementation and maintenance of adequate internal financial controls that were operating effectively for ensuring the orderly and efficient conduct of its business, including adherence to the Company's policies, the safeguarding of its assets, the prevention and detection of frauds and errors, the accuracy and completeness of the accounting records, and the timely preparation of reliable financial information, as required under the Companies Act, 2013.

Auditor's Responsibility

Our responsibility is to express an opinion on the Company's internal financial controls over financial reporting with reference to these Ind AS financial statements based on our audit. We conducted our audit in accordance with the Guidance Note on Audit of Internal Financial Controls Over Financial Reporting (the "Guidance Note") and the Standards on Auditing as specified under section 143(10) of the Companies Act, 2013, to the extent applicable to an audit of internal financial controls and, both issued by the Institute of Chartered Accountants of India. Those Standards and the Guidance Note require that we comply with ethical requirements and plan and perform the audit to obtain reasonable assurance about whether adequate internal financial controls over financial reporting with reference to these Ind AS financial statements was established and maintained and if such controls operated effectively in all material respects.

Our audit involves performing procedures to obtain audit evidence about the adequacy of the internal financial controls over financial reporting with reference to these Ind AS financial statements and their operating effectiveness. Our audit of internal financial controls over financial reporting included obtaining an understanding of internal financial controls over financial reporting with reference to these Ind AS financial statements, assessing the risk that a material weakness exists, and testing and evaluating the design and operating effectiveness of internal control based on the assessed risk. The procedures selected depend on the auditor's judgement, including the assessment of the risks of material misstatement of the financial statements, whether due to fraud or error.

We believe that the audit evidence we have obtained is sufficient and appropriate to provide a basis for our audit opinion on the internal financial controls over financial reporting with reference to these Ind AS financial statements.

S R Batliboi & Co. LLP Kolkata

Meaning of Internal Financial Controls Over Financial Reporting With Reference to these Financial Statements

A Company's internal financial control over financial reporting with reference to these Ind AS financial statements is a process designed to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles. A company's internal financial control over financial reporting with reference to these Ind AS financial statements includes those policies and procedures that (1) pertain to the maintenance of records that, in reasonable detail, accurately and fairly reflect the transactions and dispositions of the assets of the company; (2) provide reasonable assurance that transactions are recorded as necessary to permit preparation of financial statements in accordance with generally accepted accounting principles, and that receipts and expenditures of the company are being made only in accordance with authorisations of management and directors of the company; and (3) provide reasonable assurance regarding prevention or timely detection of unauthorised acquisition, use, or disposition of the company's assets that could have a material effect on the financial statements.

Inherent Limitations of Internal Financial Controls Over Financial Reporting With Reference to these Ind AS Financial Statements

Because of the inherent limitations of internal financial controls over financial reporting with reference to these Ind AS financial statements, including the possibility of collusion or improper management override of controls, material misstatements due to error or fraud may occur and not be detected. Also, projections of any evaluation of the internal financial controls over financial reporting with reference to these Ind AS financial statements to future periods are subject to the risk that the internal financial control over financial reporting with reference to these Ind AS financial statements may become inadequate because of changes in conditions, or that the degree of compliance with the policies or procedures may deteriorate.

Opinion

In our opinion, the Company has, in all material respects, adequate internal financial controls over financial reporting with reference to these Ind AS financial statements and such internal financial controls over financial reporting with reference to these Ind AS financial statements were operating effectively as at March 31, 2020, based on the internal control over financial reporting criteria established by the Company considering the essential components of internal control stated in the Guidance Note on Audit of Internal Financial Controls Over Financial Reporting issued by the Institute of Chartered Accountants of India.

MAITHON POWER LTD. MAITHON

MAITHON POWER LIMITED
Notes to the Financial Statements for the year ended 31st March,2020

1. Corporate Information

MAITHON POWER LIMITED ('the Company'), has been set up pursuant to an agreement entered into between The Tata Power Company Limited (TPCL) and Damodar Valley Corporation (DVC) with 74% and 26% shareholding respectively, to operate and maintain Electric power generating stations. The Company has set up a thermal power generation plant (comprising of two units of 525 MW each namely 'Unit I and Unit II') at Maithon, Jharkhand with a total capacity of 1050 MW. Unit I and Unit II of the project were commissioned on 1 September, 2011 and 24 July, 2012 respectively. The registered office of the Company is Corporate Center, 34 Sant Tukaram Road, Carnac Bunder, Mumbai 400009, Maharashtra, India.

The financial statements have been approved for issue in accordance with a resolution of the directors on 27th April, 2020

2. Significant Accounting Policies

2.1 Basis of preparation and presentation

The financial statements of the Company have been prepared in accordance with Indian Accounting Standards (Ind AS) notified under the Companies (Indian Accounting Standards) Rules, 2015 (as amended from time to time) and presentation requirements of Division II of Schedule III to the Companies Act, 2013, (Ind AS compliant Schedule III).

The financial statements have been prepared on a historical cost basis except for certain financial assets and liabilities measured at fair value (refer accounting policy regarding financial instruments)

Accounting Policy are consistent with earlier years unless stated otherwise.

3. Summary of Significant Accounting Policies

3.1 Leases

At inception of contract, the Company assesses whether the Contract is, or contains, a lease. A contract is, or contains, a lease if the contract conveys the right to control the use of an identified asset for a period of time in exchange for consideration. At inception or on reassessment of a contract that contains a lease component, the Company allocates consideration in the contract to each lease component on the basis of their relative stand alone price.

Company as a lessee

i) Right - of - use - assets

The Company recognizes right-of-use assets at the commencement date of the lease (i.e., the date the underlying asset is available for use). Right-of-use assets are measured at cost, less any accumulated depreciation and impairment losses, and adjusted for any remeasurement of lease liabilities. The cost of right-of-use assets includes the amount of lease liabilities recognized, initial direct costs incurred, lease payments made at or before the commencement date less any lease incentives received and estimate of costs to dismantle. Right-of-use assets are depreciated on a straight-line basis over the shorter of the lease term and the estimated useful lives of the assets, as follows:

- Land: 05 to 35 years

The right-of-use assets are also subject to impairment in accordance with Ind AS 36 "Impairment of assets". The Company presents right-of-use assets that do not meet the definition of investment property in 'Property, plant and equipment'.

ii) Lease Liabilities

At the commencement date of the lease, the Company recognizes lease liabilities measured at the present value of lease payments to be made over the lease term. In calculating the present value of lease payments, the Company uses its incremental borrowing rate at the lease commencement date because the interest rate implicit in the lease is not readily determinable.

After the commencement date , the amount of lease liabilities is increased to reflect the accretion of interest and reduced for the lease payments made. The carrying amount is remeasured when there is a change in future lease payments arising from a change in index or rate. In addition, the carrying amount of lease liabilities is remeasured if there is a modification, a change in the lease term, a change in the lease payments or a change in the assessment of an option to purchase the underlying asset. The Company's lease liabilities are included in Interest-bearing loans and borrowings.

iii) Short term leases and leases of low value of assets

The Company applies the short-term lease recognition exemption to its short-term leases (i.e., those leases that have a lease term of 12 months or less from the commencement date and do not contain a purchase option). It also applies the lease of low-value assets recognition exemption that are considered to be low value. Lease payments on short-term leases and leases of low value assets are recognised as expense on a straight-line basis over the lease term.

As a lessor

Leases in which the company does not transfer substantially all the risks and rewards incidental to ownership of an asset are classified as operating leases. Rental income arising is accounted for on a straight-line basis over the lease terms. Contingent rents are recognised as revenue in the period in which they are earned.

3.2 Foreign Currencies

The functional currency of the Company is Indian rupee (₹)

Income and expenses in foreign currencies are recorded at exchange rates prevailing on the date of the transaction. Foreign currency denominated monetary assets and liabilities are translated at the exchange rate prevailing on the balance sheet date and exchange gains and losses arising on settlement and restatement are recognized in the statement of profit and loss.

Non-monetary items that are measured in terms of historical cost in a foreign currency are translated using the exchange rates at the dates of the initial transactions. Non-monetary items measured at fair value in a foreign currency are translated using the exchange rates at the date when the fair value is determined. The gain or loss arising on translation of non-monetary items measured at fair value is treated in line with the recognition of the gain or loss on the change in fair value of the item (i.e., translation differences on items whose fair value gain or loss is recognised in OCI or profit or loss are also recognised in OCI or profit or loss, respectively).

Exchange differences on monetary items are recognized in profit or loss in the period in which they arise except for exchange differences on foreign currency borrowings relating to assets under construction for future productive use, which are included in the cost of those assets when they are regarded as an adjustment to interest costs on those foreign currency borrowings.

S R Batliboi & Co. LLP Kolkata

MAITHON POWER LTD. MAITHON

3.3 Current Vs Non Current

The Company presents assets and liabilities in the balance sheet based on current/ non-current classification. An asset is treated as current when it is:

- Expected to be realised or intended to be sold or consumed in normal operating cycle
- Held primarily for the purpose of trading
- Expected to be realised within twelve months after the reporting period, or
- Cash or cash equivalent unless restricted from being exchanged or used to settle a liability for at least twelve months after the reporting period

All other assets are classified as non-current.

A liability is treated as current when :

- it is expected to be settled in normal operating cycle,
- it is held primarily for the purpose of trading,
- it is due to be settled within twelve months after the reporting period, or
- there is no unconditional right to defer the settlement of the liability for at least twelve months after the reporting period.

All other liabilities are classified as non-current.

Deferred tax assets and liabilities are classified as non-current assets and liabilities.

The operating cycle is the time between the acquisition of assets for processing and their realisation in cash and cash equivalents. The Company has identified twelve months as its operating cycle.

3.4 Financial Instruments

A financial instrument is any contract that gives rise to a financial asset of one entity and a financial liability or equity instrument of another entity.

Financial assets and financial liabilities are recognized when the Company becomes a party to the contractual provisions of the instruments.

Financial assets and financial liabilities are initially measured at fair value. Transaction costs that are directly attributable to the acquisition or issue of financial assets and financial liabilities (other than financial assets and financial liabilities at fair value through profit or loss) are added to or deducted from the fair value of the financial assets or financial liabilities, as appropriate, on initial recognition. Transaction costs directly attributable to the acquisition of financial assets or financial liabilities at fair value through profit or loss are recognized immediately in statement of profit and loss.

3.5 Financial Assets

All regular way purchases or sales of financial assets are recognized and derecognized on a trade date basis. Regular way purchases or sales are purchases or sales of financial assets that require delivery of assets within the time frame established by regulation or convention in the marketplace. Financial assets are classified, at initial recognition, as subsequently measured at amortised cost, fair value through other comprehensive income (OCI), and fair value through profit or loss. The classification of financial assets at initial recognition depends on the financial asset's contractual cash flow characteristics and the Company's business model for managing them.

3.5.1 Financial assets at amortised cost

A 'financial asset' is measured at the amortised cost if both the following conditions are met:

a) The asset is held within a business model whose objective is to hold assets for collecting contractual cash flows, and

b) Contractual terms of the asset give rise on specified dates to cash flows that are solely payments of principal and interest (SPPI) on the principal amount outstanding.

After initial measurement, such financial assets are subsequently measured at amortised cost using the effective interest rate (EIR) method. The EIR amortisation is included in finance income in the profit or loss.

3.5.2 Financial assets at fair value through other comprehensive income(FVTOCI)

A 'financial asset' is classified as at the FVTOCI if both of the following criteria are met:

a) The objective of the business model is achieved both by collecting contractual cash flows and selling the financial assets, and
b) The asset's contractual cash flows represent SPPI.

On initial recognition, the Company makes an irrevocable election on an instrument-by-instrument basis to present the subsequent changes in fair value in other comprehensive income pertaining to investments in equity instruments, other than equity instruments which are held for trading. Subsequently, they are measured at fair value with gains and losses arising from changes in fair value recognised in other comprehensive income and accumulated in the 'Reserve for equity instruments through other comprehensive income'. The cumulative gain or loss is not reclassified to profit or loss on sale of the investments.

3.5.3 Financial assets at fair value through profit or loss (FVTPL)

Investments in equity instruments are classified as at FVTPL, unless the Company irrevocably elects on initial recognition to present subsequent changes in fair value in other comprehensive income for investments in equity instruments which are not held for trading.

Other financial assets are measured at fair value through profit or loss unless it is measured at amortised cost or at fair value through other comprehensive income on initial recognition. The transaction costs directly attributable to the acquisition of financial assets and liabilities at fair value through profit or loss are immediately recognized in statement of profit or loss.

S R Batliboi & Co. LLP Kolkata

MAITHON POWER LTD. MAITHON

3.5.4 Derecognition of Financial Assets

A financial asset (or, where applicable, a part of a financial asset or part of a group of similar financial assets) is primarily derecognised (i.e. removed from the Company's balance sheet) when:

i) the right to receive cash flows from the asset have expired, or
ii) the Company has transferred its right to receive cash flows from the asset or has assumed an obligation to pay the received cash flows in full without material delay to a third party under a 'pass-through' arrangement; and either (a) the Company has transferred substantially all the risks and rewards of the asset, or (b) the Company has neither transferred nor retained substantially all the risks and rewards of the asset, but has transferred control of the asset.

When the Company has transferred its right to receive cash flows from an asset or has entered into a pass-through arrangement, it evaluates if and to what extent it has retained the risks and rewards of ownership. When it has neither transferred nor retained substantially all of the risks and rewards of the asset, nor transferred control of the asset, the Company continues to recognise the transferred asset to the extent of the Company's continuing involvement. In that case, the Company also recognises an associated liability. The transferred asset and the associated liability are measured on a basis that reflects the rights and obligations that the Company has retained.

3.5.5 Impairment of financial assets

The Company assesses at each date of balance sheet whether a financial asset or a group of financial assets is impaired. Ind AS 109 requires expected credit losses to be measured through a loss allowance. The Company recognises lifetime expected losses for all contract assets and / or all trade receivables that do not constitute a financing transaction. For all other financial assets, expected credit losses are measured at an amount equal to the 12 month expected credit losses or at an amount equal to the life time expected credit losses if the credit risk on the financial asset has increased significantly since initial recognition.

3.6 Financial Liabilities

All financial liabilities are recognised initially at fair value and in case of loans and borrowings and payables, net of directly attributable transaction cost.
For purposes of subsequent measurement, financial liabilities are classified in two categories:
a) Financial liabilities at fair value through profit or loss
b) Financial liabilities at amortised cost (loans and borrowings)

3.6.1 Financial liabilities at fair value through profit or loss

Financial liabilities at fair value through profit or loss include financial liabilities held for trading and financial liabilities designated upon initial recognition as at fair value through profit or loss. Gains or losses on liabilities held for trading are recognised in the profit or loss. The Company has not designated any financial liability as at fair value through profit or loss.

3.6.2 Financial liabilities at amortised cost (Loans and borrowings)

After initial recognition, interest-bearing loans and borrowings are subsequently measured at amortised cost using the EIR method. Gains and losses are recognised in profit or loss when the liabilities are derecognised as well as through the EIR amortisation process. The EIR amortisation is included as finance costs in the statement of profit and loss.

3.6.3 Derecognition of Financial Liabilities

A Financial liability is derecognised when the obligation under the liability is discharged or cancelled or expires. When an existing financial liability is replaced by another from the same lender on substantially different terms, or the terms of an existing liability are substantially modified , such an exchange or modification is treated as the derecognition of the original liability and the recognition of a new liability . The difference in the respective carrying amounts is recognised in the statement of profit and loss.

3.7 Offsetting of financial instruments

Financial assets and financial liabilities are offset and the net amount is reported in the balance sheet if there is a currently enforceable legal right to offset the recognised amounts and there is an intention to settle on a net basis, to realise the assets and settle the liabilities simultaneously.

3.8 Dividend Distribution to equity shareholders of the Company

The Company recognises a liability to make dividend distributions to its equity holders when the distribution is authorised and the distribution is no longer at the discretion of the Company . As per the corporate laws in India, a distribution is authorised when it is approved by the shareholders. A corresponding amount is recognised directly in equity.
In case of Interim Dividend, the liability is recognised on its declaration by the Board of Directors.

3.9 Critical accounting estimates and judgements

In the application of the Company's accounting policies, the management of the Company is required to make judgements, estimates and assumptions about the carrying amounts of assets and liabilities that are not readily apparent from other sources. The estimates and associated assumptions are based on historical experience and other factors that are considered to be relevant. Actual results may differ from these estimates.

The estimates and underlying assumptions are reviewed on an ongoing basis. Revisions to accounting estimates are recognized in the period in which the estimate is revised if the revision affects only that period, or in the period of the revision and future periods if the revision affects both current and future periods. Detailed information about each of these estimates and judgements is included in relevant notes together with information about the basis of calculation for each affected line item in the financial statements.
The areas involving critical estimates or judgements are:

a) Estimation of current tax and deferred tax expense (including Minimum alternate tax credit) - Note 20 and Note 30
b) Recoverable from Beneficiaries / Payable to Beneficiaries - Note 10 and Note 21
c) Estimation on recoverability of Late Payment Surcharge (LPS) – Note 252
d) Estimation of defined benefit obligations- Note 19
e) Judgement to estimate the amount of provision required or to determine required disclosure related to litigation and claims against the Company - Note 32.

Estimates and judgement are continually evaluated. They are based on historical experience and other factors, including expectations of future events that may have a financial impact on the Company and that are believed to be reasonable under the circumstances.

S.R. Batliboi & Co. LLP Kolkata

MAITHON POWER LTD. MAITHON

4. Changes in accounting policies and disclosure

Ind AS 116 Leases.

Ind AS 116 Leases was notified in March 2019 and it replaced Ind AS 17 Leases. Ind AS 116 is effective for annual periods beginning on or after April 1, 2019. The Company has adopted Ind AS 116 'Leases' with a date of initial application of April 1, 2019 using modified retrospective approach, under which the cumulative effect of initial application is recognized as at April 1, 2019.

Lessor accounting under Ind AS 116 is substantially unchanged from Ind AS 17. Lessors will continue to classify leases as either operating or finance leases using similar principles as in Ind AS 17. As a lessee, the Company previously classified leases as operating or finance lease based on its assessment of whether the lease transferred significantly all of the risk and rewards incidental to the ownership of the underlying asset of the Company.

On adoption of Ind AS 116, the Company has reclassified unamortised premium for Leasehold Land as 'Right-of-use' assets amounting to ₹ 73.31 crore (adjusted by the prepaid lease payments amounting to ₹ 73.31 crore) and 'Lease liabilities' amounting to ₹ Nil , as at April 1, 2019. There is no impact on retained earnings as at April 1, 2019. (Refer note 5B)

5. Property, Plant and Equipment

5.1 Accounting Policy

Property, plant and equipment is stated at cost less accumulated depreciation and accumulated impairment losses, if any. Cost includes purchase price (net of trade discount and rebates) and any directly attributable cost of bringing the asset to its working condition for its intended use and for qualifying assets, borrowing costs capitalised in accordance with Ind AS 23. Capital work in progress is stated at cost, net of accumulated impairment loss, if any. Other Indirect Expenses incurred relating to project, net of income earned during the project development stage prior to its intended use, are considered as pre-operative expenses and disclosed under Capital Work-in-Progress. When significant parts of plant and equipment are required to be replaced at intervals, the Company depreciates them separately based on their specific useful lives. Likewise, when a major inspection is performed, its cost is recognised in the carrying amount of the plant and equipment as a replacement if the recognition criteria are satisfied. All other repair and maintenance costs are recognised in the statement of profit and loss as incurred.

5.2 **Subsequent Cost**

Subsequent costs are included in the asset's carrying amount or recognised as a separate asset, as appropriate, only when it is probable that future economic benefits associated with the item will flow to the entity and the cost can be measured reliably. All other repair and maintenance costs are recognized in profit or loss as incurred.

5.3 **Depreciation**

Depreciation commences when the assets are ready for the intended use.

Depreciation on property, plant and equipment in respect of electricity business of the Company is covered under Part B of Schedule II of the Companies Act, 2013, has been provided on the straight line method at the rates using the methodology required by relevant provisions of Central Electricity Regulatory Commission.

Depreciation on all other assets is recognised on the cost of assets (other than freehold land) less their residual values over their estimated useful lives, using the straight-line method

5.5 **Useful lives of tangible assets:**

The estimated useful lives, residual values and depreciation method are reviewed at the end of each reporting period, with the effect of any changes in estimate accounted for on a prospective basis. The Company, based on technical assessment made by technical expert and management estimate, depreciates certain items of building, plant and equipments over estimated useful lives which are different from the useful life prescribed in Schedule II to the Companies Act, 2013. The management believes that these estimated useful lives are realistic and reflect fair approximation of the period over which the assets are likely to be used.

Type of Asset	Useful Lives
Buildings-Plant	25 Years
Buildings-Others	25 Years
Plant and Equipment	25 Years
Computer	3 Years
Furniture and Fixtures	5 to 10 years
Office Equipment	5 to 10 years
Motor vehicles etc	5 Years

5.6 **Derecognition of tangible assets**

An item of Property, plant and equipment is derecognised upon disposal or when no future economic benefits are expected to arise from the continued use of the asset. Any gain or loss arising on the disposal or retirement of an item of property, plant and equipments is determined as the difference between the sales proceeds and the carrying amount of the asset and is recognised in the statement of profit and loss.

5.7 **Impairment of tangible and intangible assets**

The Company assesses, at each reporting date, whether there is an indication that an asset may be impaired. If any indication exists, or when annual impairment testing for an asset is required, the Company estimates the asset's recoverable amount. An asset's recoverable amount is the higher of an asset's or cash-generating unit's (CGU) fair value less costs of disposal and its value in use. Recoverable amount is determined for an individual asset, unless the asset does not generate cash inflows that are largely independent of those from other assets of or Group of assets.

When the carrying amount of an asset or CGU exceeds its recoverable amount, the asset is considered impaired and is written down to its recoverable amount.

Impairment losses of tangible and intangible assets are recognised in the statement of profit and loss.

MAITHON POWER LTD. MAITHON

5. **Property, Plant and Equipment (Continued)**

Note:

(a) The Plant land of 1,116 acres comprising Private land (565 acres), Gair Mazura (GM) land (115 acres) and Forest land (436 acres) was identified and acquired by Damodar Valley Corporation (DVC) exclusively for the Maithon Right Bank Thermal Power Project.
The title to the private land measuring 565 acres, acquired for the site, where the power generating station is set up, is in the name of DVC. As per the Shareholders Agreement, the title is to be transferred to the Company. Pending transfer of title as stated above, the Company had entered into an Indenture Deed with DVC on 5 December, 2008, which provided inter-alia, lease of private land for a period of 35 years (and extendable for another 35 years at the option of the Company) and provision to create security in favour of Lenders and transfer this land to the Company at the cost at which it was acquired subject to approval of the Government of the State of Jharkhand. Subsequently, the Company had created security in favour of Lenders on 17 July, 2017, as per the terms of the loan agreement and accordingly the lease rent has been fixed at ₹ 1 per annum.
The expenditure in connection with private land including land compensation and rehabilitation and resettlement expenses has been capitalised as freehold land.

(b) Railway infrastructure land of 133 acres comprising Private land (70 acres), Gair Mazura (GM) land (28 acres) and Eastern Railway land (35 acres) was identified exclusively for the Railway Corridor of Maithon Right Bank Thermal Power Project.
DVC has acquired Private land (67 acres). As per the shareholders agreement, the title / lease of these lands is to be transferred to the Company. DVC is in the process of transferring title / lease in these lands in favour of the Company as per applicable laws of the State of Jharkhand. The Company has directly acquired 2.72 acres out of 3.12 acres in name of Company and the balance is in process of acquiring.
The expenditure in connection with private land including land compensation and rehabilitation and resettlement expenses has been capitalised as freehold land.

(c) The Company has elected to fair value its freehold land and use that fair value in its opening Ind AS Balance Sheet as at 1 April, 2015 as deemed cost. Accordingly, the freehold land is carried at fair value of ₹ 296.92 crores and carrying amount reported under previous GAAP was ₹ 172.71 crores. Accordingly an amount of ₹ 123.51 crores has been credited to retained earnings as at 1 April, 2015 (transition date).

(d) Freehold land with a carrying amount of ₹ 298.64 crores (as at 31 March, 2019 - ₹ 298.64 crores) has been mortgage to secure borrowings of the Company (see note 17).

(e) Computers are included under Plant and Equipment.

Lessee

The Company has lease contracts for various items of plant, machinery, land, vehicles and other equipment used in its operations. Leases of land generally have lease terms between 05 and 35 years. Expenses related to leases of low value asset has been charged to statement of profit and loss account as lease rent amounting ₹0.68 crores during the current year. (Refer note 3.1)

Note:

(a) Out of Plant land of 1,116 acres, DVC had acquired GM Land (115 acres) and Forest Land (436 acres) from the State of Jharkhand with the right to use them for the project. As per the Shareholders Agreement, the lease is to be transferred to the Company. Pending transfer of lease in the name of the Company by DVC, the Company had entered into a License Agreement with DVC for GM Land (115 acres) and Forest Land (238 acres) on 18 January, 2008 for use of these lands initially for a period of five years and which is to be automatically renewed thereafter. The Company has received demand for 191 acres of Jungle Jhar (Forest Land) from Government of Jharkhand and has made payment of requisite amount and is in process of execution of lease from Government of Jharkhand directly in the name of Company.
The expenditure in connection with GM land and Forest land has been included in Right of Use Assets.

(b) Out of Railway infrastructure land of 133 acres, DVC has acquired GM land (18 acres). As per the shareholders agreement, the title / lease of these lands is to be transferred to the Company. DVC is in the process of transferring title / lease of these lands in favour of the Company as per applicable laws of the State of Jharkhand. The Company has directly paid requisite amount for balance GM Land (10 acres) and is in process of execution of lease agreement from Government of Jharkhand directly in the name of Company.
The Company has acquired 35 acres (14.274 hectares) through lease from Eastern Railway (ER) as required for the construction of railway infrastructure. The said land has been licensed for five years by the ER in favour of your Company with a provision of successive renewal.
The expenditure in connection with GM land and Eastern Railway land has been included in Right of Use Assets.

S R Batliboi & Co. LLP Kolkata

MAITHON POWER LTD. MAITHON

6. Other Intangible Assets

6.1. Accounting Policy

Intangible assets acquired separately
Intangible assets acquired separately are measured on initial recognition at cost. Following initial recognition, intangible assets are carried at cost less any accumulated amortisation and accumulated impairment losses, if any.

6.2. Internally generated intangibles

Internally generated intangibles, excluding capitalised development costs, are not capitalised and the related expenditure is reflected in profit or loss in the period in which the expenditure is incurred.

6.3. Subsequent Cost

Subsequent costs are included in the asset's carrying amount or recognised as a separate asset, as appropriate, only when it is probable that future economic benefits associated with the item will flow to the entity and the cost can be measured reliably.

6.4. Derecognition of intangible assets
An intangible asset is derecognized on disposal, or when no future economic benefits are expected from use or disposal. Gains or losses arising from derecognition of an intangible asset is measured as the difference between the net disposal proceeds and the carrying amount of the asset, are recognized in profit or loss when the asset is derecognized.

6.5. Amortisation of intangible assets
Intangible assets with finite lives are amortised over the useful economic life on straight line basis and assessed for impairment whenever there is an indication that the intangible asset may be impaired. The amortisation period and the amortisation method for an intangible asset with a finite useful life is reviewed at least at the end of each reporting period. Changes in the expected useful life or the expected pattern of consumption of future economic benefits embodied in the asset are considered to modify the amortisation period or method, as appropriate, and are treated as changes in accounting estimates. The amortisation expense on intangible assets with finite lives is recognised in the statement of profit and loss unless such expenditure forms part of carrying value of another asset.

Estimated useful lives of the intangible assets are as follows:

11. Inventories

Inventories are stated at the lower of cost and net realisable value. Cost of inventory includes cost of purchase and other costs incurred in bringing the inventories to their present location and condition. Costs of inventories are determined on weighted average basis. Finished goods and work in progress: cost includes cost of direct materials and labour and a proportion of manufacturing overheads based on the normal operating capacity, but excluding borrowing costs. Net realisable value represents the estimated selling price for inventories less all estimated costs of completion and costs necessary to make the sale. Unserviceable/damaged stores and spares are identified and written down based on technical evaluation.

1 The shareholders of the Company in their meeting held on 14th June 2019 approved final dividend of ₹1.51 per share aggregating ₹ 228.11 crore (excluding dividend distribution tax) for the financial year 2018-19. The said dividend was paid to the holders of fully paid equity shares on 17th June, 2019.

2 On 23th March, 2020, Interim dividend of ₹0.41 per share (4.12%) aggregating ₹62.21 Crore (excluding dividend distribution tax) was declared and paid to the holders of the fully paid equity shares on 27th March, 2020.

* Amount is lesser than the rounding off norms followed by the Company.

Nature and purpose of reserves:

Debenture Redemption Reserve

The Company has issued non convertible debentures. Accordingly, the Companies (Share capital and Debentures) Rules, 2014 (as amended), require the Company to create DRR out of profits of the Company available for payment for dividend. DRR is required to be created for an amount which is equal to 25% of the value of debentures issued.

Retained Earnings

Retained Earnings are the profits of the Company earned till date net of appropriations.

I. **Redeemable Non-Convertible Debentures issued on 30th November 2015**

(a) The Company has issued ₹ 500.00 crores of secured, non-cumulative and non-convertible redeemable debentures of face value ₹10.00 lakhs each on 30 November, 2015 at par. The debentures have been issued for the part-refinancing of the outstanding term loan from banks and financial institution. The debentures are listed in the wholesale debts market segment of National Stock Exchange of India Limited (NSE).

(b) These debentures have been secured in favour of the debenture trustee by a first ranking pari passu mortgage (by way of an equitable or any other mortgage) and charge over all the immovable properties including the freehold land of the plant and railway (included under property, plant and equipment as freehold land) of the issuer, both present and future.

(c) These debentures carry a floating rate which is base rate of HDFC Bank Limited plus 15 basis points. Interest is payable on the November of each year.

II. **Redeemable Non-Convertible Debentures issued on 9th February 2017**

(a) The Company has issued ₹ 500.00 crores of secured, non-cumulative and non-convertible redeemable debentures of face value ₹0.50 crores on 9 February, 2017 at par respectively. The debentures have been issued for the part-refinancing of the outstanding term loan from banks and financial institution. The debentures are listed in the wholesale debts market segment of National Stock Exchange of India Limited (NSE).

(b) These debentures have been secured by a first ranking pari passu mortgage (by way of an equitable or any other mortgage) and charge over all the immovable properties including the freehold land of the plant and railway (included under property, plant and equipment as freehold land), all movable properties and assets, all the bank accounts, all current assets, all intangible assets, both present and future.
Assignment by way of security over letter of credit, performance bonds or guarantees provided by any person, all the rights, title, interest, benefits, claims and demands, whatsoever of the Issuer in each of the Project Documents, all Insurance Contracts/proceeds under Insurance Contracts, in relation to the Project of the issuer.
The above security will at all times, rank pari-passu inter se the Existing Lenders and the Debenture holders.

(c) The debentures carry a fixed rate of interest of 8% per annum. Interest is payable on the February of each year.

The Company will have to take a prior written no-objection certificate from the debentureholders in the event it intends to create a security over the above secured properties in favour of its working capital lenders over and above ₹ 1000.00 crores.

III **Term loans from State Bank of India**

(a) The Company has enter into loan agreement with the State Bank of India on 18th July, 2017.

(b) These loan have been secured by Security as mentioned in above para II-(b)

(c) Interest rate on term loan rate is SBI 1 year MLCR plus 50 basis points.

IV **Term loans from Axis Bank**

(a) The Company has entered into a Loan Agreement with the Axis Bank on 28th January, 2020

(b) These loan have been secured by Security as mentioned in above para II-(b)

(c) Interest rate term loan is Axis bank 12 Month MLCR plus 25 basis points.

19. Provisions

Accounting Policy

Provisions are recognized when the Company has a present obligation (legal or constructive) as a result of a past event, it is probable that the Company will be required to settle the obligation, and a reliable estimate can be made of the amount of the obligation.

The amount recognized as a provision is the best estimate of the consideration required to settle the present obligation at the end of the reporting period, taking into account the risks and uncertainties surrounding the obligation. When a provision is measured using the cash flows estimated to settle the present obligation, its carrying amount is the present value of those cash flows (when the effect of time value of money is material)

Present obligations arising under onerous contracts are recognised and measured as provisions with charge to statement of profit and loss. An onerous contract is considered to exist where the Company has a contract under which the unavoidable costs of meeting the obligations under the contract exceed the economic benefits expected to be received from the contract.

Defined contribution plans

Payments to defined contribution retirement benefit plans are recognised as an expense when employees have rendered service entitling them to the contributions.

Defined benefits plans

The cost of providing benefits under the defined benefit plan is determined using the projected unit credit method. Remeasurements, comprising of actuarial gains and losses, the effect of the asset ceiling, excluding amounts included in net interest on the net defined benefit liabilities and the return on plan assets (excluding amounts included in net interest on the net defined benefit liability), are recognised immediately in the balance sheet with a corresponding debit or credit to retained earnings through OCI in the period in which they occur. Remeasurements are not reclassified to profit or loss in subsequent periods. Past service costs are recognised in the statement of profit and loss on the earlier of:

- The date of the plan amendment or curtailment, and
- The date that the Company recognises related restructuring costs

Net interest is calculated by applying the discount rate to the net defined benefit liabilities or asset. The Company recognises the following changes in the net defined benefit obligation as an expense in the statement of profit and loss:

- Service costs comprising current service costs, past-service costs, gains and losses on curtailments and non routine settlements; and
- Net interest expense or income.

A liability for a termination benefit is recognised at the earlier of when the entity can no longer withdraw the offer of the termination benefit and when the entity recognises any related restructuring costs.

The cost of the defined benefit gratuity plan and other post-employment medical benefits and the present value of the gratuity obligation are determined using actuarial valuations. An actuarial valuation involves making various assumptions that may differ from actual developments in the future. These include the determination of the discount rate, future salary increases and mortality rates. Due to the complexities involved in the valuation and its long-term nature, a defined benefit obligation is highly sensitive to changes in these assumptions. All assumptions are reviewed at each reporting date.

The parameter most subject to change is the discount rate. In determining the appropriate discount rate for plans operated in India, the management considers the interest rates of government bonds. The mortality rate is based on publicly available mortality tables. Those mortality tables tend to change only at interval in response to demographic changes. Future salary increases and gratuity increases are based on expected future inflation rates.

Current and other non-current employee benefits

A liability is recognised for benefits accruing to employees in respect of wages and salaries, annual leave and sick leave in the period the related service is rendered at the undiscounted amount of the benefits expected to be paid in exchange for that service.

Liabilities recognised in respect of current employee benefits are measured at the undiscounted amount of the benefits expected to be paid in exchange for the related service.

Liabilities recognised in respect of other non-current employee benefits are measured at the present value of the estimated future cash outflows expected to be made by the Company in respect of services provided by employees up to the reporting date.

Employee Benefit Plans

19.1 Defined Contribution plan

The Company makes Provident Fund and Superannuation Fund contributions to defined contribution retirement benefit plans for eligible employees. The provident fund plan is operated by the Regional Provident Fund Commissioner. The Superannuation fund is managed by LIC of India. Under the schemes, the Company is required to contribute a specified percentage of the payroll costs to fund the benefits. The only obligation of the Company with respect to the retirement benefit scheme is to make the specified contributions.

The Company has recognized ₹ 1.48 crores (31st March, 2019 ₹ 1.39 crores) for provident fund contributions and ₹ 0.49 crores (31st March, 2019 ₹ 0.59 crores) for superannuation contributions in the Statement of Profit and Loss. The contributions payable to these plans by the Company are at rates specified in the rules of the schemes.

19.2 Defined benefit plans

(i) Unfunded

Post-Employment Medical Benefits
The Company provides certain post-employment health care benefits to superannuated employees at some of its locations. In terms of the plan, the retired employees can avail free medical check-up and medicines at Company's facilities.

Pension
The Company operates a defined benefit pension plan for employees who have completed 15 years of continuous service. The plan provides benefits to members in the form of a pre-determined lumpsum payment on retirement. Executive Director, on retirement, is entitled to pension payable for life including HRA benefit. The level of benefit is approved by the Board of Directors of the Company from time to time.

Ex-Gratia Death Benefit
The Company has a defined benefit plan granting ex-gratia in case of death during service. The benefit consists of a pre-determined lumpsum amount along with a sum determined based on the last drawn basic salary per month and the length of service.

Retirement Gift
The Company has a defined benefit plan granting a pre-determined sum as retirement gift on superannuation of an employee.

(ii) Funded

Gratuity Plan
The Company has a defined benefit gratuity plan. The gratuity plan is primarily governed by the Payment of Gratuity Act, 1972. Employees who are in continuous service for a period of five years are eligible for gratuity. The level of benefits provided depends on the member's length of service and salary at the retirement, withdrawal, resignation or death of an employee. The gratuity plan is funded plan. The gratuity fund is managed by Aditya Birla Sun Life Insurance Company Limited. The fund has the form of a trust and is governed by Trustees appointed by the Company. The Trustees are responsible for the administration of the plan assets and for the definition of the investment strategy in accordance with the regulations. The funds are deployed in recognized insurer managed funds in India. The Company does not fully fund the liability and maintains a target level of funding to be maintained over a period of time based on estimates of expected gratuity payments.

The Plan assets include investments in G-Sec Bonds and accordingly exposed to financial risk.

S R Batliboi & Co. LLP Kolkata

MAITHON POWER LTD. MAITHON

(iii) Risks associated with Plan Provisions

Risks associated with the plan provisions are actuarial risks. These risks are: - (i) investment risk, (ii) interest risk (discount rate risk), (iii) mortality risk and (iv) salary risk.

Investment risk	The present value of the defined benefit plan liability is calculated using a discount rate determined by reference to Government Bonds Yield. If plan liability is funded and return on plan assets is below this rate, it will create a plan deficit.
Interest rate risk (discount rate risk)	A decrease in the bond interest rate (discount rate) will increase the plan liability; however , this will be partially offset by an increase in the return on the plan debt investments.
Mortality risk	The present value of the defined benefit plan liability is calculated by reference to the best estimate of the mortality of plan participants both during and after the employment. Indian Assured Lives Mortality (2006-08) ultimate table has been used in respect of the above. An increase in the life expectancy of the plan participants such as, an increase in the salary of the plan participants will increase the plan's liability.
Salary escalation risk	The present value of the defined benefit plan liability is calculated with the assumption of salary increase rate of plan participants in future. Deviation in the rate of increase of salary in future for plan participants from the rate of increase in salary used to determine the present value of obligation will have a bearing on the plan's liability.
Demographic risk	This is the risk of variability of results due to unsystematic nature of decrements that include mortality, withdrawal, disability and retirement. The effect of these decrements on the defined benefit obligations is not straight forward and depends upon the combination of salary increase, discount rate and vesting criterion.
Medical inflation rate risk	Higher than expected increase in salary and medical cost will increase the defined benefit obligation.
Change in Leave Balances	This is the risk of variability of results due to a significant variation from expected accumulation of leave balances. All other aspects remaining same, higher than expected increase in the leave balances will increase the defined benefit obligation.

(iv) The principal assumptions used for the purposes of the actuarial valuations were as follows:

S. No.	Particulars	Refer note below	As at 31st March, 2020	As at 31st March, 2019
i.	Discount rate (p.a)	1	6.50%	7.40%
ii.	Salary escalation rate (p.a)	2	7.00%	7.00%
iii.	Retirement Age		60 years	60 years
iv.	Mortality Table		Indian Assured Lives Mortality (2006-08) Ult	Indian Assured Lives Mortality (2006-08) (modified) Ult
v.	Withdrawal Rate			
	44>Age>21		6.00%	2.50%
	Age>44		2.00%	1.00%
vi.	Rate of Gold Inflation		8.00%	8.00%
vii.	Rate of Medical inflation (p.a)		8.00%	8.00%

Note:
1. The discount rate is based on the prevailing market yields of Indian Government securities as at the balance sheet date for the estimated term of obligations
2. The gratuity plan is funded
3. The estimates of future salary increases considered take into account the inflation, seniority, promotion and other relevant factors.

v. Movement in the fair value of the plan assets are as follows:

Particulars	For Year ended 31st March,2020 ₹ Crores	For Year ended 31st March,2019 ₹ Crores
Opening fair value of plan assets	10.46	8.68
Interest income	0.83	0.71
Employer contributions	1.55	1.02
Return on plan assets (excluding amount included in net interest expenses)	0.03	0.05
Benefits paid	-	-
Closing fair value of plan assets	**12.87**	**10.46**

Note:

1) The plan assets of the Company managed through a trust are managed by Birla Sun Life Insurance (BSLI) Company Limited. The details of investments relating to these assets are not shown by BSLI. Hence, the composition of each major category of plan assets, the percentage or amount that each major category constitutes to the fair value of the total plan assets has not been disclosed.

2) The Company expects to make a contribution of ₹ Nil (as at 31 March, 2019: 0.54 crores) to defined benefit plan during the next financial year.

vi. Sensitivity analysis

Significant actuarial assumptions for the determination of the defined benefit obligation are discount rate, expected salary increase and mortality. The sensitivity analysis below have been determined based on reasonably possible changes of the assumptions occurring at the end of the reporting period, while holding all other assumptions constant.

The sensitivity of the defined benefit obligation to changes in the weighted principal assumptions is:

Particulars	31st March,2020 ₹ Crores		31st March,2019 ₹ Crores	
	Decrease	Increase	Decrease	Increase
Discount Rate (-/+0.5%)	0.68	(0.63)	0.66	(0.60)
Salary Growth Rate (-/+0.5%)	(0.63)	0.68	(0.61)	0.66
Withdrawal Rate (-/+ 5%)	-	(0.93)	-	(0.65)

The sensitivity analysis presented above may not be representative of the actual change in the defined benefit obligation as it is unlikely that the change in assumptions would occur in isolation of one another as some of the assumptions may be correlated.

Furthermore, in presenting the above sensitivity analysis, the present value of the defined benefit obligation has been calculated using the projected unit credit method at the end of the reporting period, which is the same as that applied in calculating the defined benefit liability recognized in the Balance sheet.

There was no change in the methods and assumptions used in preparing the sensitivity analysis from prior years.

vii. The expected maturity analysis of defined benefit obligation is as follows:

Time Period	31st March,2020 ₹ Crores	31st March,2019 ₹ Crores
Within 1 year	0.43	0.90
Between 1-2 years	0.63	0.22
Between 2-3 years	0.54	0.42
Between 3-4 years	1.02	0.30
Between 4-5 years	1.23	0.76
Beyond 5 years	9.52	9.06

Particulars	31st March,2020	31st March,2019
The weighted average duration of the defined benefit plan obligation represents average duration for active members	7.4 years	8.1 years

S R Batliboi & Co. LLP Kolkata

MAITHON POWER LTD. MAITHON

19.4 **Other Defined benefit plans**

The amounts recognized in the financial statements and the movements in the net defined benefit obligations over the year are as follows:

i. Amounts recognized In the Statement of Profit and Loss in respect of these defined benefits plans are as follows:

Particulars	For Year ended 31st March,2020 ₹ crores	For Year ended 31st March, 2019 ₹ crores
Current service cost	0.99	0.94
Past Service Cost	0.19	0.55

MAITHON POWER LTD. MAITHON

20. Deferred Tax Assets / Liabilities (Net)

Accounting Policy

Deferred Tax

Deferred tax is recognised on temporary differences between the carrying amounts of assets and liabilities in the financial statements and the corresponding tax bases used in the computation of taxable profit. Deferred tax liabilities are generally recognised for all taxable temporary differences. Deferred tax assets are generally recognised for all deductible temporary differences to the extent that it is probable that taxable profits will be available against which those deductible temporary differences can be utilised. Such deferred tax assets and liabilities are not recognised if the temporary difference arises from the initial recognition of assets and liabilities in a transaction that affects neither the taxable profit nor the accounting profit.

The carrying amount of deferred tax assets is reviewed at each reporting date and reduced to the extent that it is no longer probable that sufficient taxable profit will be available to allow all or part of the deferred tax asset to be utilised. Unrecognised deferred tax assets are re-assessed at each reporting date and are recognised to the extent that it has become probable that future taxable profits will allow the deferred tax asset to be recovered.

Deferred tax liabilities and assets are measured at the tax rates that are expected to apply in the period in which the liability is settled or the asset realised, based on tax rates (and tax laws) that have been enacted or substantively enacted by the end of the reporting period.

For operations carried out under tax holiday period (80IA benefits of Income Tax Act, 1961), deferred tax assets or liabilities, if any, have been established for the tax consequences of those temporary differences between the carrying values of assets and liabilities and their respective tax bases that reverse after the tax holiday ends.

Deferred tax relating to items recognised outside profit or loss is recognised outside profit or loss (either in other comprehensive income or in equity). Deferred tax items are recognised in correlation to the underlying transaction either in OCI or directly in equity.

Deferred tax assets and liabilities are offset when they relate to income taxes levied by the same taxation authority and the relevant entity intends to settle its current tax assets and liabilities on a net basis.

Deferred tax assets include Minimum Alternative Tax (MAT) paid in accordance with the tax laws in India, which is likely to give future economic benefits in the form of availability of set off against future income tax liability. Accordingly, MAT is recognised as deferred tax asset in the balance sheet when the asset can be measured reliably and it is probable that the future economic benefit associated with the asset will be realised. The Company reviews the "MAT credit entitlement" asset at each reporting date and writes down the asset to the extent that it is no longer probable that it will pay normal tax during the specified period.

In the situations where one or more units of the Company are entitled to a tax holiday under the tax law, no deferred tax (asset or liability) is recognized in respect of temporary differences which reverse during the tax holiday period, to the extent the concerned unit's gross total income is subject to the deduction during the tax holiday period. Deferred tax in respect of temporary differences which reverse after the tax holiday period is recognized in the year in which the temporary differences originate. However, the Company restricts recognition of deferred tax assets to the extent it is probable that sufficient future taxable income will be available against which such deferred tax assets can be realized. For recognition of deferred taxes, the temporary differences which originate first are considered to reverse first.

Deferred tax assets are recognised for unused tax losses to the extent that it is probable that taxable profit will be available against which the losses can be utilised. Significant management judgement is required to determine the amount of deferred tax assets that can be recognised, based upon the likely timing and the level of future taxable profits together with future tax planning strategies.

MAT Credit Entitlement

Minimum alternate tax (MAT) paid in a year is charged to the statement of profit and loss as current tax for the year. The deferred tax asset is recognised for MAT credit available only to the extent that it is probable that the Company will pay normal income tax during the specified period, i.e., the period for which MAT credit is allowed to be carried forward. In the year in which the Company recognizes MAT credit as an asset, it is created by way of credit to the statement of profit and loss and shown as part of deferred tax asset. The Company reviews the "MAT credit entitlement" asset at each reporting date.

	As at 31st March,2020 ₹ Crores	As at 31st March,2019 ₹ Crores

S.R. Batliboi & Co. LLP Kolkata

MAITHON POWER LTD. MAITHON

Note:

a. Deferred tax assets and liabilities are being offset as they relate to taxes on income levied by the same governing taxation laws.

b. The Company is entitled for availing the tax benefit under section 80IA of the Income-tax Act, 1961, with effect from the financial year 2016-17 for 10 years. Deferred tax liabilities as at 31 March, 2020, reflect the quantum of tax liabilities accrued upto the period end but payable after the expiry of the tax holiday period.

c. Pursuant to amendment in section 115JAA of Income Tax Act,1961, MAT credit can be utilised upto the 15th assessment year as against the 10th assessment year earlier. Accordingly, the Company has recognised MAT credit aggregating to ₹ 369.39 crores as at the year-end, to the extent that there will be sufficient future taxable income against which such MAT credit entitlement can be adjusted.

d. The Company has recognised MAT credit entitlement of ₹ 369.39 crores as at March 31, 2020 (as at March 31, 2019: ₹ 338.47 crores). Basis the existing tax laws and the projections of future profitability considering definitive Power purchase agreements which are completely tied up with the plant capacity, management expects that the Company will be subjected to normal taxation from the financial year 2026-27 onwards. The management is not expecting any major capitalisation / new projects eligible under Section 80IA of the Income Tax Act, 1961 till atleast FY 2031-32. Accordingly, the management is confident of earning taxable profits each year and will be able to utilise the entire amount of MAT credit entitlement recognised in the financial Statement

MAITHON POWER LTD. MAITHON

24. Revenue from Operations

Accounting Policy

Revenue recognition
Revenue from contracts with customers is recognised when control of the goods or services are transferred to the customer at an amount that reflects the consideration to which the Company expects to be entitled in exchange for those goods or services.

Description of performance obligations are as follows :

Sale of Power - Generation (Thermal)
Revenue from sale of power is recognised net of cash discount over time for each unit of electricity delivered.

Contract price determined as per tariff regulations
The Company as per the prevalent tariff regulations is required to recover its Annual Revenue Requirement ('ARR') comprising of expenditure on account of fuel cost, operations and maintenance expenses, financing costs, taxes and assured return on regulator approved equity with additional incentive for operational efficiencies. Accordingly, rate per unit is determined using input method based on the Company's efforts to the satisfaction of a performance obligation to deliver power. As per tariff regulations, the Company determines ARR and any surplus/shortfall in recovery of the same is accounted as revenue.

Late Payment Surcharge
Late payment surcharge leviable as per the relevant contracts are recognised on actual realisation or accrued based on an assessment of certainty of realization supported by either an acknowledgement from customers or on receipt of favourable order from regulator / authorities.

No Late Payment Surcharge ('LPS') is charged for the initial 45 days from the date of receipt of invoice by customer. Thereafter, LPS is charged at the rate prescribed by the Power Purchase Agreement on the outstanding balance once the dues are received. Revenue in respect of late payment surcharge leviable as per the relevant contracts are recognised on actual realisation or accrued based on an assessment of certainty of realization supported by either an acknowledgement from customers or on receipt of favourable order from regulatory authorities.

Dividend and interest income
Dividend income from investments is recognized when the shareholder's right to receive payment has been established.

Interest income from a financial asset is recognized when it is probable that the economic benefits will flow to the Company and the amount of income can be measured reliably. Interest income is accrued on a time basis, by reference to the principal outstanding and at the effective interest rate applicable, which is the rate that exactly discounts estimated future cash receipts through the expected life of the financial asset to that asset's net carrying amount on initial recognition.

30. Income taxes

Accounting Policy

Current Tax

Current income tax assets and liabilities are measured at the amount expected to be recovered from or paid to the taxation authorities. The tax rates and tax laws used to compute the amount are those that are enacted or substantively enacted, at the reporting date in the countries where the Company operates and generates taxable income.

Current income tax relating to items recognised outside statement of profit and loss is recognised outside statement of profit and loss (either in other comprehensive income or in equity). Current tax items are recognised in correlation to the underlying transaction either in other comprehensive income or directly in equity. Management periodically evaluates positions taken in the tax returns with respect to situations in which applicable tax regulations are subject to interpretation and establishes provisions where appropriate.

(i) Income tax recognised in profit and loss		
Current tax		
For the year	80.13	77.78
In respect of earlier years	0.45	0.02
	80.58	**77.80**

32. **Contingent liabilities**

(a) The Company has received a demand of ₹ 45.00 crores from the Office of Assistant Commissioner, Dhanbad under the Building and other Construction Workers (Regulation of Employment and Conditions of Service) Act, 1996 contending that the Company has to pay 1% of the Project Cost (estimated to be ₹ 4500.00 crores) as cess.

As per legal advice obtained by the Company, the Construction Workers (Regulation of Employment and Conditions of Service) Act, 1996 is applicable on cost of construction and not on supply of equipment, accordingly the Company had deposited an amount of ₹ 1.26 crores as cess for cost of construction and raised the demand on the concerned contractor / vendor. Further, the Company is of the view that any such demand if payable will be borne by the contractor/vendors. Accordingly, no provision has been made in the books of account.

(b) Claims against the Company not acknowledged as debts for demands raised by the office of the Zonal Jt. Director General Trade for revocation of grant of deemed export benefits which has been disputed by the Company ₹ 36.41 crores (31 March, 2019 : ₹ 36.41 crores).

(c) The proposed Social Security Code, 2019, when promulgated, would subsume labour laws including Employees' Provident Funds and Miscellaneous Provisions Act and amend the definition of wages on which the organisation and its employees are to contribute towards Provident Fund. The Company believes that there will be no significant impact on its contributions to Provident Fund due to the proposed amendments. There were many interpretative issues relating to the Supreme Court (SC) judgement dated 28th February, 2019 on Provident Fund (PF) as regards definition of PF wages and inclusion of certain allowances for the purpose of PF contribution, as well as effective date of its applicability. Having consulted and evaluated impact on its financial statement, the company has implemented the changes as per clarifications vide the Apex Court judgement dated 28 February 2019, with effect from 1st March 2019 i.e., immediate after pronouncement of the judgement, as part of statutory compliance. The company will evaluate its position and act, in case there is any other interpretation of the same issued in future either in form of Social Security Code or by authorities concerned under the Employees' Provident Funds and Miscellaneous Provisions

33. **Earnings per share (EPS)**

Accounting Policy

Basic earnings per equity share is computed by dividing the net profit attributable to the equity holders of the Company by the weighted average number of equity shares outstanding during the period. Diluted earnings per equity share is computed by dividing the net profit attributable to the equity holders of the Company by the weighted average number of equity shares considered for deriving basic earnings per equity share and also the weighted average number of equity shares that could have been issued upon conversion of all dilutive potential equity shares. The dilutive potential equity shares are adjusted for the proceeds receivable had the equity shares been actually issued at fair value (i.e.the average market value of the outstanding equity shares). Dilutive potential equity shares are deemed converted as of the beginning of the period, unless issued at a later date. Dilutive potential equity shares are determined independently for each period presented.

The number of equity shares and potentially dilutive equity shares are adjusted retrospectively for all periods presented for any share splits and bonus shares issues including for changes effected prior to the approval of the financial statements by the Board of Directors.

	For Year ended 31st March,2020 ₹ Crores	For Year ended 31st March,2019 ₹ Crores
Basic and diluted earnings per share (face value of ₹ 10 each)	2.24	1.81
	2.24	1.81

Basic and diluted earnings per share

The earnings and weighted average number of equity shares used in the calculation of basic and diluted earnings per share are as follows:

Profit After Tax	337.82	272.89
The weighted average number of equity shares for Basic and Diluted EPS	1,50,89,17,729	1,50,89,17,729

Note: There have been no other transactions involving Equity Shares or Potential Equity Shares between the Reporting date and the date of authorisation of these financial statements

Total	**-**	**-**	**2,311.38**	**2,311.38**	**2,311.38**

The carrying value and fair value of financial instruments by categories as of 31st March,2019 is as follows:

Assets					
Cash and Cash Equivalents	-	-	0.10	0.10	0.10
Other balances with banks	-	-	-	-	-
Trade Receivables	-	-	362.99	362.99	362.99
Investments	-	-	-	-	-
Unbilled Revenues	-	-	98.79	98.79	98.79
Loans	-	-	0.27	0.27	0.27
Other Financial Assets	-	-	0.34	0.34	0.34
Total	**-**	**-**	**462.49**	**462.49**	**462.49**
Liabilities:					
Trade Payables	-	-	161.80	161.80	161.80
Fixed Rate Borrowings (Includes Current Maturities)	-	-	498.53	498.53	498.53
Floating Rate Borrowings (Includes Current Maturities)	-	-	1,909.61	1,909.61	1,909.61
Other Financial Liabilities	-	-	133.63	133.63	133.63
Total	**-**	**-**	**2,703.57**	**2,703.57**	**2,703.57**

The management assessed that the fair value of cash and cash equivalents, other balances with bank, trade receivables, loans,unbilled revenues, trade payables, other financial assets and liabilities approximate their carrying amounts largely due to the short term maturities of these instruments.

The fair value of the financial assets and liabilities is included at the amount at which the instrument could be exchanged in a current transaction between willing parties. The following methods and assumptions were used to estimate the fair values.

Fair value hierarchy

The fair value hierarchy is based on inputs to valuation techniques that are used to measure fair value that are either observable or unobservable and consists of the following three levels:

Quoted prices in an active market (Level 1): Inputs are quoted prices (unadjusted) in active markets for identical assets or liabilities.

Valuation techniques with observable inputs (Level 2): Inputs are other than quoted prices included within Level 1 that are observable for the asset or liability, either directly (i.e. as prices) or indirectly (i.e. derived from prices).

Valuation techniques with significant unobservable inputs (Level 3): Inputs are not based on observable market data (unobservable inputs). Fair values are determined in whole or in part using a valuation model based on assumptions that are neither supported by prices from observable current market transactions in the same instrument nor are they based on available market data.

The following table provides the fair value measurement hierarchy of the Company's assets and liabilities.

S R Batliboi & Co. LLP Kolkata

There has been no transfer between level 1 and level 2 during the year

35.2 Capital Management & Gearing Ratio

For the purpose of the Company's capital management, capital includes issued equity capital and all other equity reserves attributable to the equity holders of the Company. The primary objective of the Company's capital management is to maximize the value for shareholders.

The Company manages its capital structure and makes adjustments in light of changes in economic conditions and the requirements of the financial covenants. From time to time, the Company reviews its policy related to dividend payment to shareholders, return capital to shareholders or fresh issue of shares. The Company monitors capital using gearing ratio, which is net debt divided by total capital plus net debt. The Company's policy is to keep the gearing ratio around 50%. The Company includes within net debt, interest bearing loans and borrowings, less cash and bank balances, excluding discontinued operations as detailed in the notes below.

The Company's capital management is intended to create value for shareholders by facilitating the meeting of its long-term and short-term goals. Its Capital structure consists of net debt (borrowings as detailed in notes below) and total equity.

Gearing ratio

The gearing ratio at the end of the reporting year was as follows:

		₹ crore
	As at 31st March,2020	***As at 31st March,2019***
Debt (i)	*2,073.84*	*2,408.14*
Less: Cash and Bank balances	*84.65*	*0.10*
Net debt	1,989.19	*2,408.04*
Total Capital (ii)	*2,068.43*	*2,080.61*
Capital and net debt	**4,057.62**	***4,488.65***
Gearing ratio (%)	49.02	*53.65*

(i) Debt is defined as Non-current borrowings (including current maturities) and Current borrowings (excluding derivative, financial guarantee contracts and contingent considerations) and interest accrued on Non-current and Current borrowings.

(ii) Equity is defined as Equity share capital and other equity including reserves and surplus.

In order to achieve this overall objective, the Company's capital management, amongst other things, aims to ensure that it meets financial covenants attached to the interest-bearing loans and borrowings that define capital structure requirements. Breaches in meeting the financial covenants would permit the bank to immediately call loans and borrowings. There have been no significant breaches in the financial covenants of any interest-bearing loans and borrowing in the current year.

No changes were made in the objectives, policies or processes for managing capital during the years ended 31st March, 2020 and 31st March, 2019.

Batliboi & Co. LLP Kolkata

MAITHON POWER LTD. MAITHON

35. Financial Instruments

35.3 Financial risk management objectives and policies

The Company's principal financial liabilities, comprise borrowings, trade and other payables and other financial liabilities. The main purpose of these financial liabilities is to finance the Company's operations and to provide guarantees to support its operations. The Company's principal financial assets include investments, loans, trade and other receivables, cash and cash equivalents, other bank balances, unbilled receivables and other financial assets that derive directly from its operations.

The Company is exposed to market risk, credit risk and liquidity risk. The Company's senior management oversees the management of these risks. The Company's senior management is supported by a risk committee that reviews the financial risks and the appropriate financial risk governance framework for the Company. The Company's financial risk activities are governed by appropriate policies and procedures and that financial risks are identified, measured and managed in accordance with the Company's policies and risk objectives. The risk management polices is approved by the board of directors, which is summarized below.

35.3.1 Market risk management

Market risk is the risk that the fair value of future cash flows of a financial instrument will fluctuate because of changes in market prices. Market risk comprises of three types of risk: currency risk, interest rate risk and equity price risk. The impact of equity price risk and currency risk is not material. Financial instruments affected by market risk are loans and borrowings.

The sensitivity analysis in the following sections relate to the position as at 31st March, 2020 and 31st March, 2019.

a) Foreign currency risk management

(i) The year end foreign currency exposures of the Company is Nil (31 March, 2019: Nil)

(ii) The Company did not have any long term contract including derivative contract for which there were any material foreseeable losses.

b) Interest rate risk management

Interest rate risk is the risk that the fair value or future cash flows of a financial instrument will fluctuate because of changes in market interest rates. The company's exposure to the risk of changes in market interest rates relates primarily to the company's long-term debt obligations with floating interest rates.

The Company manages its interest rate risk by having a balanced portfolio of fixed and variable rate loans and borrowings.The exposure of the Company's borrowings to interest rate changes at the end of the reporting period are as follows :

Particulars	31st March,2020		31st March,2019	
	Balance	Percentage	Balance	Percentage
Fixed Rate Borrowings (Includes Current Maturities)	498.74	24%	498.53	21%
Floating Rate Borrowings (Includes Current Maturities)	1,575.10	76%	1,909.61	79%
Total	**2,073.84**		**2,408.14**	

Interest rate sensitivity:

The sensitivity analysis below have been determined based on exposure to interest rates for term loans and debentures at the end of the reporting period and the stipulated change taking place at the beginning of the financial year and held constant throughout the reporting period in case of term loans and debentures that have floating rates.

If the interest rates had been 50 basis points higher or lower and all the other variables were held constant, the effect on Interest expense for the respective financial years and consequent effect on Company's profit in that financial year would have been as below:

Particulars	31st March,2020		As of 31st March, 2019	
	50 bps increase	50 bps decrease	*50 bps increase*	*50 bps decrease*
Interest expense on loan	(+) ₹ 7.82	(-) ₹ 7.82	(+) ₹ 7.27	(-) ₹ 7.27
Effect on profit before tax	(-) ₹ 7.82	(+) ₹ 7.82	(-) ₹ 7.27	(+) ₹ 7.27

S R Batliboi & Co. LLP Kolkata

MAITHON POWER LTD. MAITHON

35.3.2 Credit risk management

Credit risk is the risk that counterparty will not meet its obligations under a financial instrument or customer contract, leading to a financial loss. The Company is exposed to credit risk from its operating activities (i.e.primarily trade receivables and unbilled revenue) and from its financing activities including loans, foreign exchange transactions and other financial instruments.

Collateral held as security

The Company holds collateral i.e. letter of credit and bank guarantee to partly secure its outstanding trade receivables. Credit risk associated with receivables is mitigated because the receivables are partly secure.

₹ crore

	31st March,2020	31st March,2019
Trade Receivables	217.71	362.99
Loans	0.21	0.27
Other Financial Assets	0.41	0.34
Unbilled Revenue	31.77	98.79
Total	**250.10**	***462.39***

Refer Note 13 for credit risk and other information in respect of trade receivables. Other receivables as stated above are due from the parties under normal course of the business and as such the Company believes exposure to credit risk to be minimal.

35.3.3 Liquidity risk management

Liquidity risk is the risk that the company will encounter difficulty in meeting obligation, associated with financial liabilities that are settled by delivering cash or another financial asset.

The Company manages liquidity risk by maintaining adequate reserves, banking facilities and reserve borrowing facilities, by continuously monitoring forecast and actual cash flows and matching the maturity profiles of financial assets and liabilities. The Company has access to a sufficient variety of sources of funding. Having regards to the nature of the business wherein the Company is able to generate fixed cash flows over a period of time and to optimize the cost of funding, the Company, from time to time, funds its long -term investment from short-term sources. The short-term borrowings can be rollforward or, if required, can be refinanced from long term borrowings.

35.4 Commodity price risk

The operating activity of the company involves generation of power and therefore requires continuous supply of coal. The company has entered into fuel supply agreements with Central Coalfields Limited and Bharat Coking Coal Limited and any price fluctuation is passed on to the customers

S.R. Batliboi & Co. LLP Kolkata

MAITHON POWER LTD. MAITHON

36. India and other global markets experienced significant disruption in operations resulting from uncertainty caused by the worldwide coronavirus pandemic. Considering that the entity is in the business of essential services, management believes that there is not much of an impact likely due to this pandemic. However, the Company is closely monitoring developments, its operations, liquidity and capital resources and is actively working to minimize the impact of this unprecedented situation.

37. There were no amounts which were required to be transferred to the Investor Education and Protection Fund by the Company.

38. **Segment Reporting**

The Company is mainly engaged in the business of generation and selling of power in India. Based on the information reported to the chief operating decision maker (CODM) for the purpose of resource allocation and assessment of performance, there are no reportable segments in accordance with the requirements of Indian Accounting Standard 108- 'Operating Segments', notified under the Companies (Indian Accounting Standards) Rules, 2015.

39. **Mega power status**

The Company had applied to the Ministry of Power, Government of India along with necessary documents for grant of Mega Power Status to the Company's 1050 MW Maithon Right Bank Thermal Power Plant. Pending receipt of the mega power certificate, the Company remains liable to pay excise and customs duty on its receipts of goods and materials wherever applicable. Accordingly, the Company had paid excise duty to its vendors aggregating to ₹ 120.24 crores (31 March, 2019: ₹ 120.24 crores) upto 31 March, 2020. Out of total payment of excise duty to suppliers ₹ 119.11 crores (net of receipts) had been capitalised and the balance amount of ₹ 1.13 crores is included in capital work-in-progress as at 31 March, 2020.

40. **Significant Events after the Reporting Period**

There were no significant adjusting event that occurred subsequent to the reporting period.

41. Previous year's figures are regrouped / rearranged, where necessary, to confirm to the current year's presentation.

INDEPENDENT AUDITOR'S REPORT

To the Members of Maithon Power Limited

Report on the Audit of the Ind AS Financial Statements

Opinion

We have audited the accompanying Ind AS financial statements of Maithon Power Limited ("the Company"), which comprise the Balance sheet as at March 31 2021, the Statement of Profit and Loss, including the statement of Other Comprehensive Income, the Cash Flow Statement and the Statement of Changes in Equity for the year then ended, and notes to the Ind AS financial statements, including a summary of significant accounting policies and other explanatory information.

In our opinion and to the best of our information and according to the explanations given to us, the aforesaid Ind AS financial statements give the information required by the Companies Act, 2013, as amended ("the Act") in the manner so required and give a true and fair view in conformity with the accounting principles generally accepted in India, of the state of affairs of the Company as at March 31, 2021, its profit including other comprehensive income, its cash flows and the changes in equity for the year ended on that date.

Basis for Opinion

We conducted our audit of the Ind AS financial statements in accordance with the Standards on Auditing (SAs), as specified under section 143(10) of the Act. Our responsibilities under those Standards are further described in the 'Auditor's Responsibilities for the Audit of the Ind AS Financial Statements' section of our report. We are independent of the Company in accordance with the 'Code of Ethics' issued by the Institute of Chartered Accountants of India together with the ethical requirements that are relevant to our audit of the financial statements under the provisions of the Act and the Rules thereunder, and we have fulfilled our other ethical responsibilities in accordance with these requirements and the Code of Ethics. We believe that the audit evidence we have obtained is sufficient and appropriate to provide a basis for our audit opinion on the Ind AS financial statements.

Key Audit Matters

Key audit matters are those matters that, in our professional judgment, were of most significance in our audit of the Ind AS financial statements for the financial year ended March 31, 2021. These matters were addressed in the context of our audit of the Ind AS financial statements as a whole, and in forming our opinion thereon, and we do not provide a separate opinion on these matters. For each matter below, our description of how our audit addressed the matter is provided in that context.

We have determined the matters described below to be the key audit matters to be communicated in our report. We have fulfilled the responsibilities described in the Auditor's responsibilities for the audit of the Ind AS financial statements section of our report, including in relation to these matters. Accordingly, our audit included the performance of procedures designed to respond to our assessment of the risks of material misstatement of the Ind AS financial statements. The results of our audit procedures, including the procedures performed to address the matters below, provide the basis for our audit opinion on the accompanying Ind AS financial statements.

S R Batliboi & Co. LLP Kolkata

Key audit matters	How our audit addressed the key audit matter
Accrual of Recoverable from Beneficiaries/Payable to Beneficiaries for items which are subject matter of true up in tariff orders *(as described in note 21 of the Ind AS financial statements)*	
The Company's revenue recognition is guided by the tariff norms prescribed by the Central Electricity Regulatory Commission (CERC) guidelines and the tariff orders passed based on these regulations. Consequently, Recoverable from Beneficiaries/Payable to Beneficiaries is recognized for items which are subject matter of true up in tariff orders to be notified in future years. Judgement is exercised by management in estimating recoverability / payability of such other assets and liabilities in the books. As on 31st March 2021, the Company is carrying an amount of Rs. 227.48 crores as Payable to Beneficiaries (Net of Recoverable from Beneficiaries of Rs 38.44 crores) which is material to the financial statements of the Company. Considering the judgements involved in the estimates of various elements of capital and operational costs used in the computation of revenue as per applicable regulations and the amount involved we have determined this to be a key audit matter.	Following procedures have been performed to address this key audit matter:- 1. We have tested the design and operating effectiveness of key controls related to the estimation and recoverability of such Recoverable from Beneficiaries/Payable to Beneficiaries. 2. We have evaluated the estimation by management of recognition of these Recoverable from Beneficiaries/Payable to Beneficiaries with reference to Tariff Regulations and the tariff orders of earlier years on similar matters and also the underlying records of the Company. 3. We discussed with management to understand their assessment on each of the qualitative factors and ensured consistency of the management's explanation with the underlying documentation, rules and regulations. 4. We have re-calculated the workings obtained from the management to check the arithmetical accuracy of the calculations. 5. We have also checked the adequacy of the disclosure on these matters in the financial statements of the Company. 6. We have also obtained necessary management representation.
Recoverability of MAT Credit Entitlement in future *(as described in note 20c of the Ind AS financial statements)*	
The Company does not have taxable income owing to unabsorbed depreciation and benefits of section 80IA of Income Tax Act, 1961 and therefore it has been paying Minimum Alternate Tax (MAT) under the relevant provisions of the Income Tax Act, 1961. The Act also provides that such MAT paid can be carried forward (MAT credit entitlement) for set off against regular tax payable in subsequent fifteen years period. Such MAT credit entitlements are recognized when it is probable that normal taxable profit will be available against which these MAT credits can be utilized. The Company's ability to recognize these MAT credit assets is assessed by management at the end of each reporting	Following procedures have been performed to address this key audit matter:- 1. We have tested the design and operating effectiveness of key controls related to the computation and recognition of such MAT credit. 2. We have assessed the methodology applied by the Company with current accounting standards and applicable taxation laws along with the future business forecast of taxable profits. 3. We have assessed the likelihood of the Company to utilize the available MAT credit entitlements in the future with underlying projections and assumptions relating to future estimated profits, future capitalization and depreciation allowance thereon and future estimates of taxable income. 4. We have tested the arithmetical accuracy of the future taxability workings prepared by the management.

S R Batliboi & Co. Kolkata

Key audit matters	How our audit addressed the key audit matter
period, taking into account forecasts of future taxable profits and the law and jurisdiction of the land in force. The assumptions on these projections are determined by management. At March 31, 2021, MAT credit entitlement recognized in the Company's financial statements amounts to Rs. 418.68 crores. Given the degree of judgment involved in making a forecast of the profitability of the Company and the materiality of the amounts involved, we considered this to be a key audit matter.	5. We have also checked the adequacy of the disclosure on these matters in the financial statements of the Company. 6. We have also obtained necessary management representation.

We have determined that there are no other key audit matters to communicate in our report.

Information Other than the Financial Statements and Auditor's Report Thereon

The Company's Board of Directors is responsible for the other information. The other information comprises the information included in the Annual report, but does not include the Ind AS financial statements and our auditor's report thereon.

Our opinion on the Ind AS financial statements does not cover the other information and we do not express any form of assurance conclusion thereon.

In connection with our audit of the Ind AS financial statements, our responsibility is to read the other information and, in doing so, consider whether such other information is materially inconsistent with the financial statements or our knowledge obtained in the audit or otherwise appears to be materially misstated. If, based on the work we have performed, we conclude that there is a material misstatement of this other information, we are required to report that fact. We have nothing to report in this regard.

Responsibilities of Management for the Ind AS Financial Statements

The Company's Board of Directors is responsible for the matters stated in section 134(5) of the Act with respect to the preparation of these Ind AS financial statements that give a true and fair view of the financial position, financial performance including other comprehensive income, cash flows and changes in equity of the Company in accordance with the accounting principles generally accepted in India, including the Indian Accounting Standards (Ind AS) specified under section 133 of the Act read with [the Companies (Indian Accounting Standards) Rules, 2015, as amended. This responsibility also includes maintenance of adequate accounting records in accordance with the provisions of the Act for safeguarding of the assets of the Company and for preventing and detecting frauds and other irregularities; selection and application of appropriate accounting policies; making judgments and estimates that are reasonable and prudent; and the design, implementation and maintenance of adequate internal financial controls, that were operating effectively for ensuring the accuracy and completeness of the accounting records, relevant to the preparation and presentation of the Ind AS financial statements that give a true and fair view and are free from material misstatement, whether due to fraud or error.

In preparing the Ind AS financial statements, management is responsible for assessing the Company's ability

S R Batliboi & Co. LLP Kolkata

to continue as a going concern, disclosing, as applicable, matters related to going concern and using the going concern basis of accounting unless management either intends to liquidate the Company or to cease operations, or has no realistic alternative but to do so.

Those Board of Directors are also responsible for overseeing the Company's financial reporting process.

Auditor's Responsibilities for the Audit of the Ind AS Financial Statements

Our objectives are to obtain reasonable assurance about whether the Ind AS financial statements as a whole are free from material misstatement, whether due to fraud or error, and to issue an auditor's report that includes our opinion. Reasonable assurance is a high level of assurance, but is not a guarantee that an audit conducted in accordance with SAs will always detect a material misstatement when it exists. Misstatements can arise from fraud or error and are considered material if, individually or in the aggregate, they could reasonably be expected to influence the economic decisions of users taken on the basis of these Ind AS financial statements.

As part of an audit in accordance with SAs, we exercise professional judgment and maintain professional skepticism throughout the audit. We also:

- Identify and assess the risks of material misstatement of the Ind AS financial statements, whether due to fraud or error, design and perform audit procedures responsive to those risks, and obtain audit evidence that is sufficient and appropriate to provide a basis for our opinion. The risk of not detecting a material misstatement resulting from fraud is higher than for one resulting from error, as fraud may involve collusion, forgery, intentional omissions, misrepresentations, or the override of internal control.
- Obtain an understanding of internal control relevant to the audit in order to design audit procedures that are appropriate in the circumstances. Under section 143(3)(i) of the Act, we are also responsible for expressing our opinion on whether the Company has adequate internal financial controls with reference to financial statements in place and the operating effectiveness of such controls.
- Evaluate the appropriateness of accounting policies used and the reasonableness of accounting estimates and related disclosures made by management.
- Conclude on the appropriateness of management's use of the going concern basis of accounting and, based on the audit evidence obtained, whether a material uncertainty exists related to events or conditions that may cast significant doubt on the Company's ability to continue as a going concern. If we conclude that a material uncertainty exists, we are required to draw attention in our auditor's report to the related disclosures in the financial statements or, if such disclosures are inadequate, to modify our opinion. Our conclusions are based on the audit evidence obtained up to the date of our auditor's report. However, future events or conditions may cause the Company to cease to continue as a going concern.
- Evaluate the overall presentation, structure and content of the Ind AS financial statements, including the disclosures, and whether the Ind AS financial statements represent the underlying transactions and events in a manner that achieves fair presentation.

We communicate with those charged with governance regarding, among other matters, the planned scope and timing of the audit and significant audit findings, including any significant deficiencies in internal control that we identify during our audit.

We also provide those charged with governance with a statement that we have complied with relevant ethical requirements regarding independence, and to communicate with them all relationships and other matters that may reasonably be thought to bear on our independence, and where applicable, related safeguards.

S R Batliboi & Co. LLP Kolkata

From the matters communicated with those charged with governance, we determine those matters that were of most significance in the audit of the Ind AS financial statements for the financial year ended March 31, 2021 and are therefore the key audit matters. We describe these matters in our auditor's report unless law or regulation precludes public disclosure about the matter or when, in extremely rare circumstances, we determine that a matter should not be communicated in our report because the adverse consequences of doing so would reasonably be expected to outweigh the public interest benefits of such communication.

Report on Other Legal and Regulatory Requirements

1. As required by the Companies (Auditor's Report) Order, 2016 ("the Order"), issued by the Central Government of India in terms of sub-section (11) of section 143 of the Act, we give in the "Annexure 1" a statement on the matters specified in paragraphs 3 and 4 of the Order.
2. As required by Section 143(3) of the Act, we report that:

   (a) We have sought and obtained all the information and explanations which to the best of our knowledge and belief were necessary for the purposes of our audit;

   (b) In our opinion, proper books of account as required by law have been kept by the Company so far as it appears from our examination of those books;

   (c) The Balance Sheet, the Statement of Profit and Loss including the Statement of Other Comprehensive Income, the Cash Flow Statement and Statement of Changes in Equity dealt with by this Report are in agreement with the books of account;

   (d) In our opinion, the aforesaid Ind AS financial statements comply with the Accounting Standards specified under Section 133 of the Act, read with Companies (Indian Accounting Standards) Rules, 2015, as amended;

   (e) On the basis of the written representations received from the directors as on March 31, 2021 taken on record by the Board of Directors, none of the directors is disqualified as on March 31, 2021 from being appointed as a director in terms of Section 164 (2) of the Act;

   (f) With respect to the adequacy of the internal financial controls with reference to these Ind AS financial statements and the operating effectiveness of such controls, refer to our separate Report in "Annexure 2" to this report;

   (g) In our opinion, the managerial remuneration for the year ended March 31, 2021 has been paid / provided by the Company to its directors in accordance with the provisions of section 197 read with Schedule V to the Act;

   (h) With respect to the other matters to be included in the Auditor's Report in accordance with Rule 11 of the Companies (Audit and Auditors) Rules, 2014, as amended in our opinion and to the best of our information and according to the explanations given to us:

      i. The Company has disclosed the impact of pending litigations on its financial position in its Ind AS financial statements – Refer Note 32 to the Ind AS financial statements;

      ii. The Company did not have any long-term contracts including derivative contracts for which there were any material foreseeable losses;

S.R. BATLIBOI & CO. LLP
Chartered Accountants

iii. There were no amounts which were required to be transferred to the Investor Education and Protection Fund by the Company.

"ANNEXURE 1" TO THE INDEPENDENT AUDITOR'S REPORT OF EVEN DATE ON THE FINANCIAL STATEMENTS OF MAITHON POWER LIMTED

(i)

(a) The Company has maintained proper records showing full particulars, including quantitative details and situation of fixed assets.

(b) All fixed assets have not been physically verified by the management during the year but there is a regular programme of verification which, in our opinion, is reasonable having regard to the size of the Company and the nature of its assets. No material discrepancies were noticed on such verification.

(c) According to the information and explanation given to us and the records examined by us and based on the examination of the registered sale deed/transfer deed/conveyance deed provided to us, we report that, the title deeds, comprising of all the immovable properties of land which are freehold, are in the name of the Company as at the balance sheet date, except the following:

Type of Land	Area	Amount in crores	Remarks
Raiyati Land (Free hold) located at Maithon, Jharkhand.	564.67 acres	159.80	The title deed to the Private land is in the name of Damodar Valley Corporation (DVC). Pending transfer of title as per the shareholders agreement, the Company had entered into an Indenture deed with DVC on 5 December, 2008, which provided inter-alia, lease of private land for a period of 35 years (and extendable for another 35 years at the option of the Company).
Railway Land (Freehold Land) located at Maithon, Jharkhand.	66.74 acres	137.12	The title deed to the Private land is in the name of Damodar Valley Corporation (DVC). As required by the shareholders agreement, DVC is in the process of transferring title in these lands in favour of the Company as per applicable laws of the State of Jharkhand.
GM land and Forest land (Leasehold) located at Maithon, Jharkhand	220.01 acres	25.44	The Company has made payments to Government of Jharkhand in the earlier years for acquisition of this land on lease and is in the process of execution of lease agreement from Government of Jharkhand.

S R Batliboi & Co. LLP Kolkata

GM land (Leasehold) located at Maithon, Jharkhand	40.95 acres	7.12	DVC had acquired this land on lease from the State of Jharkhand with the right to use them for the project and the lease is pending transfer in the name of the Company by DVC.

(ii) The management has conducted physical verification of inventory at reasonable intervals during the year and no material discrepancies were noticed on such physical verification.

(iii) According to the information and explanations given to us, the Company has not granted any loans, secured or unsecured to Companies, firms, Limited Liability Partnerships or other parties covered in the register maintained under section 189 of the Companies Act, 2013. Accordingly, the provisions of clause 3(iii)(a), (b) and (c) of the Order are not applicable to the Company and hence not commented upon.

(iv) In our opinion and according to the information and explanations given to us, there are no loans, investments, guarantees, and securities given in respect of which provisions of section 185 and 186 of the Companies Act 2013 are applicable and hence not commented upon.

(v) According to the information and explanation given to us the Company has not accepted any deposits within the meaning of Sections 73 to 76 of the Act and the Companies (Acceptance of Deposits) Rules, 2014 (as amended). Accordingly, the provisions of clause 3(v) of the Order are not applicable.

(vi) We have broadly reviewed the books of account maintained by the Company pursuant to the rules made by the Central Government for the maintenance of cost records under section 148(1) of the Companies Act, 2013, related to the generation of electricity, and are of the opinion that prima facie, the specified accounts and records have been made and maintained. We have not, however, made a detailed examination of the same.

(vii)

(a) The Company is regular in depositing with appropriate authorities undisputed statutory dues including provident fund, employees' state insurance, income-tax, sales-tax, service tax, duty of custom, duty of excise, value added tax, goods and service tax, cess and other statutory dues applicable to it.

(b) According to the information and explanations given to us, no undisputed amounts payable in respect of provident fund, employees' state insurance, income-tax, service tax, sales-tax, duty of custom, duty of excise, value added tax, goods and service tax, cess and other statutory dues were outstanding, at the year end, for a period of more than six months from the date they became payable.

(c) According to the information and explanations given to us, there are no dues of income tax, sales-tax, service tax, customs duty, excise duty, value added tax , goods and service tax and cess which have not been deposited on account of any dispute.

(viii) In our opinion and according to the information and explanations given to us by the management, the Company has not defaulted in repayment of loans or borrowing to a financial institution, bank or government or dues to debenture holders. The Company did not have any outstanding loans or borrowing in respect of financial institution and government.

S R Batliboi & Co. LLP Kolkata

(ix) According to the information and explanations given by the management, the Company has not raised any money by way of initial public offer / further public offer. The Company has utilized the money raised by way of debt instruments in the nature of non-convertible debentures and term loan for the purposes for which they were raised.

(x) Based upon the audit procedures performed for the purpose of reporting the true and fair view of the financial statements and according to the information and explanations given by the management, we report that no fraud by the company or no fraud / material fraud on the Company by the officers and employees of the Company has been noticed or reported during the year.

(xi) According to the information and explanations given by the management, the managerial remuneration has been paid / provided in accordance with the requisite approvals mandated by the provisions of section 197 read with Schedule V to the Companies Act, 2013.

(xii) In our opinion, the Company is not a Nidhi company. Therefore, the provisions of clause 3(xii) of the order are not applicable to the Company and hence not commented upon.

(xiii) According to the information and explanations given by the management, transactions with the related parties are in compliance with section 177 and 188 of Companies Act, 2013 where applicable and the details have been disclosed in the notes to the financial statements, as required by the applicable accounting standards.

(xiv) According to the information and explanations given to us and on an overall examination of the balance sheet, the Company has not made any preferential allotment or private placement of shares or fully or partly convertible debentures during the year under review and hence, reporting requirements under clause 3(xiv) are not applicable to the company and, not commented upon.

(xv) According to the information and explanations given by the management, the Company has not entered into any non-cash transactions with directors or persons connected with him as referred to in section 192 of Companies Act, 2013.

(xvi) According to the information and explanations given to us, the provisions of section 45-IA of the Reserve Bank of India Act, 1934 are not applicable to the Company.

ANNEXURE 2 TO THE INDEPENDENT AUDITOR'S REPORT OF EVEN DATE ON THE IND AS FINANCIAL STATEMENTS OF MAITHON POWER LIMTED

Report on the Internal Financial Controls under Clause (i) of Sub-section 3 of Section 143 of the Companies Act, 2013 ("the Act")

We have audited the internal financial controls over financial reporting of Maithon Power Limited ("the Company") as of March 31, 2021 in conjunction with our audit of the Ind AS financial statements of the Company for the year ended on that date.

Management's Responsibility for Internal Financial Controls

The Company's Management is responsible for establishing and maintaining internal financial controls based on the internal control over financial reporting criteria established by the Company considering the essential components of internal control stated in the Guidance Note on Audit of Internal Financial Controls Over Financial Reporting issued by the Institute of Chartered Accountants of India. These responsibilities include the design, implementation and maintenance of adequate internal financial controls that were operating effectively for ensuring the orderly and efficient conduct of its business, including adherence to the Company's policies, the safeguarding of its assets, the prevention and detection of frauds and errors, the accuracy and completeness of the accounting records, and the timely preparation of reliable financial information, as required under the Companies Act, 2013.

Auditor's Responsibility

Our responsibility is to express an opinion on the Company's internal financial controls over financial reporting with reference to these Ind AS financial statements based on our audit. We conducted our audit in accordance with the Guidance Note on Audit of Internal Financial Controls Over Financial Reporting (the "Guidance Note") and the Standards on Auditing as specified under section 143(10) of the Companies Act, 2013, to the extent applicable to an audit of internal financial controls and, both issued by the Institute of Chartered Accountants of India. Those Standards and the Guidance Note require that we comply with ethical requirements and plan and perform the audit to obtain reasonable assurance about whether adequate internal financial controls over financial reporting with reference to these Ind AS financial statements was established and maintained and if such controls operated effectively in all material respects.

Our audit involves performing procedures to obtain audit evidence about the adequacy of the internal financial controls over financial reporting with reference to these Ind AS financial statements and their operating effectiveness. Our audit of internal financial controls over financial reporting included obtaining an understanding of internal financial controls over financial reporting with reference to these Ind AS financial statements, assessing the risk that a material weakness exists, and testing and evaluating the design and operating effectiveness of internal control based on the assessed risk. The procedures selected depend on the auditor's judgement, including the assessment of the risks of material misstatement of the financial statements, whether due to fraud or error.

We believe that the audit evidence we have obtained is sufficient and appropriate to provide a basis for our audit opinion on the internal financial controls over financial reporting with reference to these Ind AS financial statements.

Meaning of Internal Financial Controls Over Financial Reporting With Reference to these Financial Statements

A Company's internal financial control over financial reporting with reference to these Ind AS financial statements is a process designed to provide reasonable assurance regarding the reliability of financial reporting

S R Batliboi & Co. Kolk

and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles. A company's internal financial control over financial reporting with reference to these Ind AS financial statements includes those policies and procedures that (1) pertain to the maintenance of records that, in reasonable detail, accurately and fairly reflect the transactions and dispositions of the assets of the company; (2) provide reasonable assurance that transactions are recorded as necessary to permit preparation of financial statements in accordance with generally accepted accounting principles, and that receipts and expenditures of the company are being made only in accordance with authorisations of management and directors of the company; and (3) provide reasonable assurance regarding prevention or timely detection of unauthorised acquisition, use, or disposition of the company's assets that could have a material effect on the financial statements.

Inherent Limitations of Internal Financial Controls Over Financial Reporting With Reference to these Ind AS Financial Statements

Because of the inherent limitations of internal financial controls over financial reporting with reference to these Ind AS financial statements, including the possibility of collusion or improper management override of controls, material misstatements due to error or fraud may occur and not be detected. Also, projections of any evaluation of the internal financial controls over financial reporting with reference to these Ind AS financial statements to future periods are subject to the risk that the internal financial control over financial reporting with reference to these Ind AS financial statements may become inadequate because of changes in conditions, or that the degree of compliance with the policies or procedures may deteriorate.

Opinion

In our opinion, the Company has, in all material respects, adequate internal financial controls over financial reporting with reference to these Ind AS financial statements and such internal financial controls over financial reporting with reference to these Ind AS financial statements were operating effectively as at March 31, 2021, based on the internal control over financial reporting criteria established by the Company considering the essential components of internal control stated in the Guidance Note on Audit of Internal Financial Controls Over Financial Reporting issued by the Institute of Chartered Accountants of India.

1. **Corporate Information**

MAITHON POWER LIMITED ('the Company'), has been set up pursuant to an agreement entered into between The Tata Power Company Limited (TPCL) and Damodar Valley Corporation (DVC) with 74% and 26% shareholding respectively, to operate and maintain Electric power generating stations. The Company has set up a thermal power generation plant (comprising of two units of 525 MW each namely 'Unit I and Unit II') at Maithon, Jharkhand with a total capacity of 1050 MW. Unit I and Unit II of the project were commissioned on 1 September, 2011 and 24 July, 2012 respectively. The registered office of the Company is Corporate Center, 34 Sant Tukaram Road, Carnac Bunder, Mumbai 400009, Maharashtra, India.

The financial statements have been approved for issue in accordance with a resolution of the directors on 16th April, 2021

2. **Significant Accounting Policies**

2.1 Basis of preparation and presentation

The financial statements of the Company have been prepared in accordance with Indian Accounting Standards (Ind AS) notified under the Companies (Indian Accounting Standards) Rules, 2015 (as amended from time to time) and presentation requirements of Division II of Schedule III to the Companies Act, 2013, (Ind AS compliant Schedule III).

The financial statements have been prepared on a historical cost basis except for certain financial assets and liabilities measured at fair value (refer accounting policy regarding financial instruments)

Accounting Policy are consistent with earlier years unless stated otherwise.

3. **Summary of Significant Accounting Policies**

3.1 Leases

At inception of contract, the Company assesses whether the Contract is, or contains, a lease. A contract is, or contains, a lease if the contract conveys the right to control the use of an identified asset for a period of time in exchange for consideration. At inception or on reassessment of a contract that contains a lease component, the Company allocates consideration in the contract to each lease component on the basis of their relative stand alone price.

Company as a lessee

i) Right - of - use - assets

The Company recognizes right-of-use assets at the commencement date of the lease (i.e., the date the underlying asset is available for use). Right-of-use assets are measured at cost, less any accumulated depreciation and impairment losses, and adjusted for any remeasurement of lease liabilities. The cost of right-of-use assets includes the amount of lease liabilities recognized, initial direct costs incurred, lease payments made at or before the commencement date less any lease incentives received and estimate of costs to dismantle. Right-of-use assets are depreciated on a straight-line basis over the shorter of the lease term and the estimated useful lives of the assets, as follows:

- Land: 05 to 35 years

The right-of-use assets are also subject to impairment in accordance with Ind AS 36 "Impairment of assets". The Company presents right-of-use assets that do not meet the definition of investment property in 'Property, plant and equipment'.

ii) Lease Liabilities

At the commencement date of the lease, the Company recognizes lease liabilities measured at the present value of lease payments to be made over the lease term. In calculating the present value of lease payments, the Company uses its incremental borrowing rate at the lease commencement date because the interest rate implicit in the lease is not readily determinable.

After the commencement date , the amount of lease liabilities is increased to reflect the accretion of interest and reduced for the lease payments made. The carrying amount is remeasured when there is a change in future lease payments arising from a change in index or rate. In addition, the carrying amount of lease liabilities is remeasured if there is a modification, a change in the lease term, a change in the lease payments or a change in the assessment of an option to purchase the underlying asset. The Company's lease liabilities are included in Interest-bearing loans and borrowings.

iii) Short term leases and leases of low value of assets

The Company applies the short-term lease recognition exemption to its short-term leases (i.e., those leases that have a lease term of 12 months or less from the commencement date and do not contain a purchase option). It also applies the lease of low-value assets recognition exemption that are considered to be low value. Lease payments on short-term leases and leases of low value assets are recognised as expense on a straight-line basis over the lease term.

As a lessor

Leases in which the company does not transfer substantially all the risks and rewards incidental to ownership of an asset are classified as operating leases. Rental income arising is accounted for on a straight-line basis over the lease terms. Contingent rents are recognised as revenue in the period in which they are earned.

3.2 Foreign Currencies

The functional currency of the Company is Indian rupee (₹)

Income and expenses in foreign currencies are recorded at exchange rates prevailing on the date of the transaction. Foreign currency denominated monetary assets and liabilities are translated at the exchange rate prevailing on the balance sheet date and exchange gains and losses arising on settlement and restatement are recognized in the statement of profit and loss.

Non-monetary items that are measured in terms of historical cost in a foreign currency are translated using the exchange rates at the dates of the initial transactions. Non-monetary items measured at fair value in a foreign currency are translated using the exchange rates at the date when the fair value is determined. The gain or loss arising on translation of non-monetary items measured at fair value is treated in line with the recognition of the gain or loss on the change in fair value of the item (i.e., translation differences on items whose fair value gain or loss is recognised in OCI or profit or loss are also recognised in OCI or profit or loss, respectively).

Exchange differences on monetary items are recognized in profit or loss in the period in which they arise except for exchange differences on foreign currency borrowings relating to assets under construction for future productive use, which are included in the cost of those assets when they are regarded as an adjustment to interest costs on those foreign currency borrowings.

S R Batliboi & Co. LLP Kolkata

MAITHON POWER LIMITED

3.3 Current Vs Non Current

The Company presents assets and liabilities in the balance sheet based on current/ non-current classification. An asset is treated as current when it is:

- Expected to be realised or intended to be sold or consumed in normal operating cycle
- Held primarily for the purpose of trading
- Expected to be realised within twelve months after the reporting period, or
- Cash or cash equivalent unless restricted from being exchanged or used to settle a liability for at least twelve months after the reporting period

All other assets are classified as non-current.

A liability is treated as current when :

- it is expected to be settled in normal operating cycle,
- it is held primarily for the purpose of trading,
- it is due to be settled within twelve months after the reporting period, or
- there is no unconditional right to defer the settlement of the liability for at least twelve months after the reporting period.

All other liabilities are classified as non-current.

Deferred tax assets and liabilities are classified as non-current assets and liabilities.

The operating cycle is the time between the acquisition of assets for processing and their realisation in cash and cash equivalents. The Company has identified twelve months as its operating cycle.

3.4 Financial Instruments

A financial instrument is any contract that gives rise to a financial asset of one entity and a financial liability or equity instrument of another entity.

Financial assets and financial liabilities are recognized when the Company becomes a party to the contractual provisions of the instruments.

Financial assets and financial liabilities are initially measured at fair value. Transaction costs that are directly attributable to the acquisition or issue of financial assets and financial liabilities (other than financial assets and financial liabilities at fair value through profit or loss) are added to or deducted from the fair value of the financial assets or financial liabilities, as appropriate, on initial recognition. Transaction costs directly attributable to the acquisition of financial assets or financial liabilities at fair value through profit or loss are recognized immediately in statement of profit and loss.

3.5 Financial Assets

All regular way purchases or sales of financial assets are recognized and derecognized on a trade date basis. Regular way purchases or sales are purchases or sales of financial assets that require delivery of assets within the time frame established by regulation or convention in the marketplace. Financial assets are classified, at initial recognition, as subsequently measured at amortised cost, fair value through other comprehensive income (OCI), or fair value through profit or loss. The classification of financial assets at initial recognition depends on the financial asset's contractual cash flow characteristics and the Company's business model for managing them.

3.5.1 Financial assets at amortised cost

A 'financial asset' is measured at the amortised cost if both the following conditions are met:

a) The asset is held within a business model whose objective is to hold assets for collecting contractual cash flows, and

b) Contractual terms of the asset give rise on specified dates to cash flows that are solely payments of principal and interest (SPPI) on the principal amount outstanding.

After initial measurement, such financial assets are subsequently measured at amortised cost using the effective interest rate (EIR) method. The EIR amortisation is included in finance income in the profit or loss.

3.5.2 Financial assets at fair value through other comprehensive income(FVTOCI)

A 'financial asset' is classified as at the FVTOCI if both of the following criteria are met:

a) The objective of the business model is achieved both by collecting contractual cash flows and selling the financial assets, and
b) The asset's contractual cash flows represent SPPI.

On initial recognition, the Company makes an irrevocable election on an instrument-by-instrument basis to present the subsequent changes in fair value in other comprehensive income pertaining to investments in equity instruments, other than equity instruments which are held for trading. Subsequently, they are measured at fair value with gains and losses arising from changes in fair value recognised in other comprehensive income and accumulated in the 'Reserve for equity instruments through other comprehensive income'. The cumulative gain or loss is not reclassified to profit or loss on sale of the investments.

3.5.3 Financial assets at fair value through profit or loss (FVTPL)

Investments in equity instruments are classified as at FVTPL, unless the Company irrevocably elects on initial recognition to present subsequent changes in fair value in other comprehensive income for investments in equity instruments which are not held for trading.
Other financial assets are measured at fair value through profit or loss unless it is measured at amortised cost or at fair value through other comprehensive income on initial recognition. The transaction costs directly attributable to the acquisition of financial assets and liabilities at fair value through profit or loss are immediately recognized in statement of profit or loss.

S R Batliboi & Co. LLP Kolkata

MAITHON POWER LIMITED

3.5.4 Derecognition of Financial Assets

A financial asset (or, where applicable, a part of a financial asset or part of a group of similar financial assets) is primarily derecognised (i.e. removed from the Company's balance sheet) when:

i) the right to receive cash flows from the asset have expired, or
ii) the Company has transferred its right to receive cash flows from the asset or has assumed an obligation to pay the received cash flows in full without material delay to a third party under a 'pass-through' arrangement; and either (a) the Company has transferred substantially all the risks and rewards of the asset, or (b) the Company has neither transferred nor retained substantially all the risks and rewards of the asset, but has transferred control of the asset.

When the Company has transferred its right to receive cash flows from an asset or has entered into a pass-through arrangement, it evaluates if and to what extent it has retained the risks and rewards of ownership. When it has neither transferred nor retained substantially all of the risks and rewards of the asset, nor transferred control of the asset, the Company continues to recognise the transferred asset to the extent of the Company's continuing involvement. In that case, the Company also recognises an associated liability. The transferred asset and the associated liability are measured on a basis that reflects the rights and obligations that the Company has retained.

3.5.5 Impairment of financial assets

The Company assesses at each date of balance sheet whether a financial asset or a group of financial assets is impaired. Ind AS 109 requires expected credit losses to be measured through a loss allowance. The Company recognises lifetime expected losses for all contract assets and / or all trade receivables that do not constitute a financing transaction. For all other financial assets, expected credit losses are measured at an amount equal to the 12 month expected credit losses or at an amount equal to the life time expected credit losses if the credit risk on the financial asset has increased significantly since initial recognition.

3.6 Financial Liabilities

All financial liabilities are recognised initially at fair value and in case of loans and borrowings and payables, net of directly attributable transaction cost.
For purposes of subsequent measurement, financial liabilities are classified in two categories:
a) Financial liabilities at fair value through profit or loss
b) Financial liabilities at amortised cost (loans and borrowings)

3.6.1 Financial liabilities at fair value through profit or loss

Financial liabilities at fair value through profit or loss include financial liabilities held for trading and financial liabilities designated upon initial recognition as at fair value through profit or loss. Gains or losses on liabilities held for trading are recognised in the profit or loss. The Company has not designated any financial liability as at fair value through profit or loss.

3.6.2 Financial liabilities at amortised cost (Loans and borrowings)

After initial recognition, interest-bearing loans and borrowings are subsequently measured at amortised cost using the EIR method. Gains and losses are recognised in profit or loss when the liabilities are derecognised as well as through the EIR amortisation process. The EIR amortisation is included as finance costs in the statement of profit and loss.

3.6.3 Derecognition of Financial Liabilities

A Financial liability is derecognised when the obligation under the liability is discharged or cancelled or expires. When an existing financial liability is replaced by another from the same lender on substantially different terms, or the terms of an existing liability are substantially modified , such an exchange or modification is treated as the derecognition of the original liability and the recognition of a new liability . The difference in the respective carrying amounts is recognised in the statement of profit and loss.

3.7 Offsetting of financial instruments

Financial assets and financial liabilities are offset and the net amount is reported in the balance sheet if there is a currently enforceable legal right to offset the recognised amounts and there is an intention to settle on a net basis, to realise the assets and settle the liabilities simultaneously.

3.8 Dividend Distribution to equity shareholders of the Company

The Company recognises a liability to make dividend distributions to its equity holders when the distribution is authorised and the distribution is no longer at the discretion of the Company . As per the corporate laws in India, a distribution is authorised when it is approved by the shareholders. A corresponding amount is recognised directly in equity.
In case of Interim Dividend, the liability is recognised on its declaration by the Board of Directors.

4. Critical accounting estimates and judgements

In the application of the Company's accounting policies, the management of the Company is required to make judgements, estimates and assumptions about the carrying amounts of assets and liabilities that are not readily apparent from other sources. The estimates and associated assumptions are based on historical experience and other factors that are considered to be relevant. Actual results may differ from these estimates.

The estimates and underlying assumptions are reviewed on an ongoing basis. Revisions to accounting estimates are recognized in the period in which the estimate is revised if the revision affects only that period, or in the period of the revision and future periods if the revision affects both current and future periods. Detailed information about each of these estimates and judgements is included in relevant notes together with information about the basis of calculation for each affected line item in the financial statements.

The areas involving critical estimates or judgements are:

a) Estimation of current tax and deferred tax expense (including Minimum alternate tax credit) - Note 20 and Note 30
b) Recoverable from Beneficiaries / Payable to Beneficiaries(Net) - Note 21
c) Estimation on recoverability of Late Payment Surcharge (LPS) – Note 25
d) Estimation of defined benefit obligations- Note 19
e) Judgement to estimate the amount of provision required or to determine required disclosure related to litigation and claims against the Company - Note 32.

Estimates and judgement are continually evaluated. They are based on historical experience and other factors, including expectations of future events that may have a financial impact on the Company and that are believed to be reasonable under the circumstances.

S R Batliboi & Co. LLP Kolkata

MAITHON POWER LIMITED

5. Property, Plant and Equipment

5.1 Accounting Policy

Property, plant and equipment is stated at cost less accumulated depreciation and accumulated impairment losses, if any. Cost includes purchase price (net of trade discount and rebates) and any directly attributable cost of bringing the asset to its working condition for its intended use and for qualifying assets, borrowing costs capitalised in accordance with Ind AS 23. Capital work in progress is stated at cost, net of accumulated impairment loss, if any. Other Indirect Expenses incurred relating to project, net of income earned during the project development stage prior to its intended use, are considered as pre-operative expenses and disclosed under Capital Work-in-Progress. When significant parts of plant and equipment are required to be replaced at intervals, the Company depreciates them separately based on their specific useful lives. Likewise, when a major inspection is performed, its cost is recognised in the carrying amount of the plant and equipment as a replacement if the recognition criteria are satisfied. All other repair and maintenance costs are recognised in the statement of profit and loss as incurred.

5.2 Subsequent Cost

Subsequent costs are included in the asset's carrying amount or recognised as a separate assel, as appropriate, only when it is probable that future economic benefits associated with the item will flow to the entity and the cost can be measured reliably. All other repair and maintenance costs are recognized in profit or loss as incurred.

5.3 Depreciation

Depreciation commences when the assets are ready for the intended use.

Depreciation on property, plant and equipment in respect of electricity business of the Company is covered under Part B of Schedule II of the Companies Act, 2013, has been provided on the straight line method at the rates using the methodology required by relevant provisions of Central Electricity Regulatory Commission.

Depreciation on all other assets is recognised on the cost of assets (other than freehold land) less their residual values over their estimated useful lives, using the straight-line method

5.5 Useful lives of tangible assets:

The estimated useful lives, residual values and depreciation method are reviewed at the end of each reporting period, with the effect of any changes in estimate accounted for on a prospective basis. The Company, based on technical assessment made by technical expert and management estimate, depreciates certain items of building, plant and equipments over estimated useful lives which are different from the useful life prescribed in Schedule II to the Companies Act, 2013. The management believes that these estimated useful lives are realistic and reflect fair approximation of the period over which the assets are likely to be used.

Type of Asset	Useful Lives
Buildings-Plant	25 Years
Buildings-Others	25 Years
Plant and Equipment	25 Years
Computer	3 Years
Furniture and Fixtures	5 to 10 years
Office Equipment	5 to 10 years
Motor vehicles etc	5 Years
Railway Sidings & Overhead Electrification	25 Years

5.6 Derecognition of tangible assets

An item of Property, plant and equipment is derecognised upon disposal or when no future economic benefits are expected to arise from the continued use of the asset. Any gain or loss arising on the disposal or retirement of an item of property, plant and equipments is determined as the difference between the sales proceeds and the carrying amount of the asset and is recognised in the statement of profit and loss.

5.7 Impairment of tangible and intangible assets

The Company assesses, at each reporting date, whether there is an indication that an asset may be impaired. If any indication exists, or when annual impairment testing for an asset is required, the Company estimates the asset's recoverable amount. An asset's recoverable amount is the higher of an asset's or cash-generating unit's (CGU) fair value less costs of disposal and its value in use. Recoverable amount is determined for an individual asset, unless the asset does not generate cash inflows that are largely independent of those from other assets of or Group of assets.

When the carrying amount of an asset or CGU exceeds its recoverable amount, the asset is considered impaired and is written down to its recoverable amount.

Impairment losses of tangible and intangible assets are recognised in the statement of profit and loss.

S R Batliboi & Co. LLP Kolkata

MAITHON POWER LIMITED

5. Property, Plant and Equipment (Continued)

Note:

(a) The Plant land of 1,110 acres comprising Private land (565.67 acres), Gair Mazura (GM) land (114.95 acres), Forest land (238.39 acres) and Jungle Jhaar Land (191.67 acre) was identified and acquired by Damodar Valley Corporation (DVC) exclusively for the Maithon Right Bank Thermal Power Project.
The title to the private land measuring 565.67 acres, acquired for Maithon Right Bank Thermal Power Project for setting up a Power Generation Plant, is in the name of DVC. As per the Shareholders Agreement, the title is to be transferred to the Company. Pending transfer of title as stated above, the Company had entered into an Indenture Deed with DVC on 5 December, 2008, which provided inter-alia, lease of private land for a period of 35 years (and extendable for another 35 years at the option of the Company) and provision to create security in favour of Lenders and transfer this land to the Company at the cost at which it was acquired subject to approval of the Government of the State of Jharkhand. Subsequently, the Company had created security in favour of Lenders on 17 July, 2017, as per the terms of the loan agreement and accordingly the lease rent has been fixed at ₹ 1 per annum.
The expenditure in connection with private land including land compensation and rehabilitation and resettlement expenses has been capitalised as freehold land.

(b) Railway infrastructure land of 134 acres comprising Private land (70 acres), Gair Mazura (GM) land (28.34 acres) and Eastern Railway land (35.27 acres) was identified exclusively for the Railway Corridor of Maithon Right Bank Thermal Power Project.
DVC has acquired Private land (66.74 acres). As per the shareholders agreement, the title / lease of these lands is to be transferred to the Company. DVC is in the process of transferring title / lease in these lands in favour of the Company as per applicable laws of the State of Jharkhand. The Company has directly acquired 3.36 acres in name of the Company.
The expenditure in connection with private land including land compensation and rehabilitation and resettlement expenses has been capitalised as freehold land.

(c) The Company has elected to fair value its freehold land and use that fair value in its opening Ind AS Balance Sheet as at 1 April, 2015 as deemed cost. Accordingly, the freehold land is carried at fair value of ₹ 296.22 crores and carrying amount reported under previous GAAP was ₹ 172.71 crores. Accordingly an amount of ₹ 123.51 crores has been credited to retained earnings as at 1 April, 2015 (transition date).

(d) Freehold land with a carrying amount of ₹ 299.91 crores (as at 31 March, 2020 - ₹ 298.64 crores) has been mortgage to secure borrowings of the Company (see note 17).

(e) Railway Infrastructure of ₹ 597.48 crores has been capitalised on 28th March 2021.

Lessee

The Company has lease contracts for various items of plant, machinery, land, vehicles and other equipment used in its operations. Leases of land generally have lease terms between 05 and 35 years. Expenses related to leases of low value asset has been charged to statement of profit and loss account as lease rent amounting ₹0.66 crores during the current year (31st March 2020 - ₹0.68 crores). (Refer note 3.1)

Note:

(a) Out of Plant land of 1,110 acres, DVC had acquired GM Land (114.95 acres), Forest land (238.39 acres) and Jungle Jhaar Land (191.67 acre) from the State of Jharkhand with the right to use them for the project. As per the Shareholders Agreement, the lease is to be transferred to the Company. Pending transfer of lease in the name of the Company by DVC, the Company had entered into a License Agreement with DVC on 18 January, 2008 for use of these lands initially for a period of five years and which is to be automatically renewed thereafter. The Company has received demand for 191.67 acres of Jungle Jhar (Forest Land) from Government of Jharkhand and has made payment of requisite amount and is in process of execution of lease from Government of Jharkhand directly in the name of Company.
The expenditure in connection with GM land and Forest land has been included in Right of Use Assets.

S R Batliboi & Co. LLP Kolkata

MAITHON POWER LIMITED

(b) Out of Railway infrastructure land of 134 acres, DVC has acquired GM land (17.78 acres). As per the shareholders agreement, the title / lease of these lands is to be transferred to the Company. DVC is in the process of transferring title / lease of these lands in favour of the Company as per applicable laws of the State of Jharkhand. The Company has directly paid requisite amount for balance GM Land (10.56 acres) and is in process of execution of lease agreement from Government of Jharkhand directly in the name of Company.
The Company has acquired 35.27 acres (14.274 hectares) through lease from Eastern Railway (ER) as required for the construction of railway infrastructure. The said land has been licensed for five years by the ER in favour of your Company with a provision of successive renewal.
The expenditure in connection with GM land and Eastern Railway land has been included in Right of Use Assets.

(B) Right - of - use - assets	67.44	69.09
Total Property, Plant & Equipment	**3,611.61**	**3,217.73**

6. Other Intangible Assets

6.1. Accounting Policy

Intangible assets acquired separately
Intangible assets acquired separately are measured on initial recognition at cost. Following initial recognition, intangible assets are carried at cost less any accumulated amortisation and accumulated impairment losses, If any.

6.2. Subsequent Cost

Subsequent costs are included in the asset's carrying amount or recognised as a separate asset, as appropriate, only when it is probable that future economic benefits associated with the item will flow to the entity and the cost can be measured reliably.

6.3. Derecognition of intangible assets

An intangible asset is derecognized on disposal, or when no future economic benefits are expected from use or disposal. Gains or losses arising from derecognition of an intangible asset is measured as the difference between the net disposal proceeds and the carrying amount of the asset, are recognized in profit or loss when the asset is derecognized.

6.4. Amortisation of intangible assets

Intangible assets with finite lives are amortised over the useful economic life on straight line basis and assessed for impairment whenever there is an indication that the intangible asset may be impaired. The amortisation period and the amortisation method for an intangible asset with a finite useful life is reviewed at least at the end of each reporting period. Changes in the expected useful life or the expected pattern of consumption of future economic benefits embodied in the asset are considered to modify the amortisation period or method, as appropriate, and are treated as changes in accounting estimates. The amortisation expense on intangible assets with finite lives is recognised in the statement of profit and loss unless such expenditure forms part of carrying value of another asset.

Estimated useful lives of the intangible assets are as follows:

Inventories are stated at the lower of cost and net realisable value. Cost of inventory includes cost of purchase and other costs incurred in bringing the inventories to their present location and condition. Costs of inventories are determined on weighted average basis. Finished goods and work in progress: cost includes cost of direct materials and labour and a proportion of manufacturing overheads based on the normal operating capacity, but excluding borrowing costs. Net realisable value represents the estimated selling price for inventories less all estimated costs of completion and costs necessary to make the sale. Unserviceable/damaged stores and spares are identified and written down based on technical evaluation.

2 On 29th September, 2020, Interim dividend of ₹0.40 per share (3.98%) aggregating ₹60 Crore was declared and paid to the holders of the fully paid equity shares on 1st October, 2020.

3 On 30th December, 2020, Interim dividend of ₹0.40 per share (3.98%) aggregating ₹60 Crore was declared and paid to the holders of the fully paid equity shares on 30th December, 2020.

* Amount is lesser than the rounding off norms followed by the Company.

Nature and purpose of reserves:

Debenture Redemption Reserve

The Company was required to create a Debenture Redemption Reserve out of the profits which are available for payment of dividend for the purpose of redemption of debentures. Pursuant to Companies (Share Capital and Debentures) Amendment Rules, 2019 dated 16th August, 2019, the Company is not required to create Debenture Redemption Reserve (DRR). Accordingly, the Company has not created DRR during the year and DRR created till previous years will be transferred to retained earnings on redemption of debentures.

Retained Earnings

Retained Earnings are the profits of the Company earned till date net of appropriations.

* (Refer Note 18)

I. Redeemable Non-Convertible Debentures issued on 30th November 2015

(a) The Company has issued ₹ 500.00 crores of secured, non-cumulative and non-convertible redeemable debentures of face value ₹10.00 lakhs each on 30 November, 2015 at par. The debentures have been issued for the part-refinancing of the outstanding term loan from banks and financial institution. The debentures are listed in the wholesale debts market segment of National Stock Exchange of India Limited (NSE).

(b) These debentures have been secured in favour of the debenture trustee by a first ranking pari passu mortgage (by way of an equitable or any other mortgage) and charge over all the immovable properties including the freehold land of the plant and railway (included under property, plant and equipment as freehold land) of the issuer, both present and future.

(c) These debentures carry a floating rate which is base rate of HDFC Bank Limited plus 15 basis points. Interest is payable on the 30th of November each year.

II. Redeemable Non-Convertible Debentures issued on 9th February 2017

(a) The Company has issued ₹ 500.00 crores of secured, non-cumulative and non-convertible redeemable debentures of face value ₹50.00 Lakhs on 9 February, 2017 at par respectively. The debentures have been issued for the part-refinancing of the outstanding term loan from banks and financial institution. The debentures are listed in the wholesale debts market segment of National Stock Exchange of India Limited (NSE).

(b) These debentures have been secured by a first ranking pari passu mortgage (by way of an equitable or any other mortgage) and charge over all the immovable properties including the freehold land of the plant and railway (included under property, plant and equipment as freehold land), all movable properties and assets, all the bank accounts, all current assets, all intangible assets, both present and future.
Assignment by way of security over letter of credit, performance bonds or guarantees provided by any person, all the rights, title, interest, benefits, claims and demands, whatsoever of the Issuer in each of the Project Documents, all Insurance Contracts/proceeds under Insurance Contracts, in relation to the Project of the issuer.
The above security will at all times, rank pari-passu inter se the Existing Lenders and the Debenture holders.

(c) The debentures carry a fixed rate of interest of 8% per annum. Interest is payable on the 9th of February each year.

The Company will have to take a prior written no-objection certificate from the debentureholders in the event it intends to create a security over the above secured properties in favour of its working capital lenders over and above ₹ 1000.00 crores.

III. Redeemable Non-Convertible Debentures issued on 24th December 2020

(a) The Company has issued ₹ 199.00 crores of secured, non-cumulative and non-convertible redeemable debentures of face value ₹10.00 Lakhs each on 24th December, 2020 at par respectively. The debentures have been issued for the part-repayment of the existing term loan availed from SBI. The debentures are listed in the wholesale debts market segment of National Stock Exchange of India Limited (NSE).

(b) These Debentures have been secured by Security as mentioned in above para II-(b)

(c) The debentures carry a fixed coupon rate of 6.25% per annum. Interest is payable in 24th of December each year.

IV Term Loan from Axis Bank & Union Bank of India

(a) The Company has entered into a Loan Agreement of ₹ 500 Crore for Railway Infra with Axis Bank on 28th January, 2020. AXIS bank has down sell borrowings of ₹ 150 Crs to Union Bank of India with same terms & condition on 6th January 2021.

(b) These loan have been secured by Securily as mentioned in above para II-(b)

(c) Interest rate term loan is Axis bank 12 Month MLCR plus 25 basis points.

V. Term Loans from Axis Bank (Refinancing)

(a) The Company has entered into a Loan Agreement of ₹ 225 Crore with Axis Bank on 29th December, 2020 for the part-refinancing of the outstanding term loan from SBI.

(b) These loan have been secured by Securily as mentioned in above para II-(b)

(c) Interest rate term loan is Axis Bank 12 month MCLR plus 5 basis points.

19. Provisions

Accounting Policy

Provisions are recognized when the Company has a present obligation (legal or constructive) as a result of a past event, it is probable that the Company will be required to settle the obligation, and a reliable estimate can be made of the amount of the obligation.

The amount recognized as a provision is the best estimate of the consideration required to settle the present obligation at the end of the reporting period, taking into account the risks and uncertainties surrounding the obligation. When a provision is measured using the cash flows estimated to settle the present obligation, its carrying amount is the present value of those cash flows (when the effect of time value of money is material)

Present obligations arising under onerous contracts are recognised and measured as provisions with charge to statement of profit and loss. An onerous contract is considered to exist where the Company has a contract under which the unavoidable costs of meeting the obligations under the contract exceed the economic benefits expected to be received from the contract.

Defined contribution plans
Payments to defined contribution retirement benefit plans are recognised as an expense when employees have rendered service entitling them to the contributions.

Defined benefits plans
The cost of providing benefits under the defined benefit plan is determined using the projected unit credit method. Remeasurements, comprising of actuarial gains and losses, the effect of the asset ceiling, excluding amounts included in net interest on the net defined benefit liabilities and the return on plan assets (excluding amounts included in net interest on the net defined benefit liability), are recognised immediately in the balance sheet with a corresponding debit or credit to retained earnings through OCI in the period in which they occur. Remeasurements are not reclassified to profit or loss in subsequent periods. Past service costs are recognised in the statement of profit and loss on the earlier of:

- The date of the plan amendment or curtailment, and
- The date that the Company recognises related restructuring costs

Net interest is calculated by applying the discount rate to the net defined benefit liabilities or asset. The Company recognises the following changes in the net defined benefit obligation as an expense in the statement of profit and loss:

- Service costs comprising current service costs, past-service costs, gains and losses on curtailments and non routine settlements; and
- Net interest expense or income.

A liability for a termination benefit is recognised at the earlier of when the entity can no longer withdraw the offer of the termination benefit and when the entity recognises any related restructuring costs.

The cost of the defined benefit gratuity plan and other post-employment medical benefits and the present value of the gratuity obligation are determined using actuarial valuations. An actuarial valuation involves making various assumptions that may differ from actual developments in the future. These include the determination of the discount rate, future salary increases and mortality rates. Due to the complexities involved in the valuation and its long-term nature, a defined benefit obligation is highly sensitive to changes in these assumptions. All assumptions are reviewed at each reporting date.

The parameter most subject to change is the discount rate. In determining the appropriate discount rate for plans operated in India, the management considers the interest rates of government bonds. The mortality rate is based on publicly available mortality tables. Those mortality tables tend to change only at interval in response to demographic changes. Future salary increases and gratuity increases are based on expected future inflation rates.

Current and other non-current employee benefits
A liability is recognised for benefits accruing to employees in respect of wages and salaries, annual leave and sick leave in the period the related service is rendered at the undiscounted amount of the benefits expected to be paid in exchange for that service.

Liabilities recognised in respect of current employee benefits are measured at the undiscounted amount of the benefits expected to be paid in exchange for the related service.

Liabilities recognised in respect of other non-current employee benefits are measured at the present value of the estimated future cash outflows expected to be made by the Company in respect of services provided by employees up to the reporting date.

Employee Benefit Plans

19.1 Defined Contribution plan

The Company makes Provident Fund and Superannuation Fund contributions to defined contribution retirement benefit plans for eligible employees. The provident fund plan is operated by the Regional Provident Fund Commissioner. The Superannuation fund is managed by LIC of India. Under the schemes, the Company is required to contribute a specified percentage of the payroll costs to fund the benefits. The only obligation of the Company with respect to the retirement benefit scheme is to make the specified contributions.

The Company has recognized ₹ 1.37 crores (31st March, 2020 ₹ 1.48 crores) for provident fund contributions and ₹ 0.45 crores (31st March, 2020 ₹ 0.49 crores) for superannuation contributions in the Statement of Profit and Loss. The contributions payable to these plans by the Company are at rates specified in the rules of the schemes.

19.2 Defined benefit plans

(i) Unfunded

Post-Employment Medical Benefits
The Company provides certain post-employment health care benefits to superannuated employees at some of its locations. In terms of the plan, the retired employees can avail free medical check-up and medicines at Company's facilities.

Pension
The Company operates a defined benefit pension plan for employees who have completed 15 years of continuous service. The plan provides benefits to members in the form of a pre-determined lumpsum payment on retirement. Executive Director, on retirement, is entitled to pension payable for life including HRA benefit. The level of benefit is approved by the Board of Directors of the Company from time to time.

Ex-Gratia Death Benefit
The Company has a defined benefit plan granting ex-gratia in case of death during service. The benefit consists of a pre-determined lumpsum amount along with a sum determined based on the last drawn basic salary per month and the length of service.

Retirement Gift
The Company has a defined benefit plan granting a pre-determined sum as retirement gift on superannuation of an employee.

(ii) Funded

Gratuity Plan
The Company has a defined benefit gratuity plan. The gratuity plan is primarily governed by the Payment of Gratuity Act, 1972. Employees who are in continuous service for a period of five years are eligible for gratuity. The level of benefits provided depends on the member's length of service and salary at the retirement, withdrawal, resignation or death of an employee. The gratuity plan is funded plan. The gratuity fund is managed by Aditya Birla Sun Life Insurance Company Limited. The fund has the form of a trust and is governed by Trustees appointed by the Company. The Trustees are responsible for the administration of the plan assets and for the definition of the investment strategy in accordance with the regulations. The funds are deployed in recognized insurer managed funds in India. The Company does not fully fund the liability and maintains a target level of funding to be maintained over a period of time based on estimates of expected gratuity payments.

The Plan assets include investments in G-Sec Bonds and accordingly exposed to financial risk.

S R Batliboi & Co. LLP Kolkata

MAITHON POWER LIMITED

(iii) Risks associated with Plan Provisions

Risks associated with the plan provisions are actuarial risks. These risks are: - (i) investment risk, (ii) interest risk (discount rate risk), (iii) mortality risk and (iv) salary risk.

Investment risk	The present value of the defined benefit plan liability is calculated using a discount rate determined by reference to Government Bonds Yield. If plan liability is funded and return on plan assets is below this rate, it will create a plan deficit.
Interest rate risk (discount rate risk)	A decrease in the bond interest rate (discount rate) will increase the plan liability; however , this will be partially offset by an increase in the return on the plan debt investments.
Mortality risk	The present value of the defined benefit plan liability is calculated by reference to the best estimate of the mortality of plan participants both during and after the employment. Indian Assured Lives Mortality (2006-08) ultimate table has been used in respect of the above. An increase in the life expectancy of the plan participants such as, an increase in the salary of the plan participants will increase the plan's liability.
Salary escalation risk	The present value of the defined benefit plan liability is calculated with the assumption of salary increase rate of plan participants in future. Deviation in the rate of increase of salary in future for plan participants from the rate of increase in salary used to determine the present value of obligation will have a bearing on the plan's liability.
Demographic risk	This is the risk of variability of results due to unsystematic nature of decrements that include mortality, withdrawal, disability and retirement. The effect of these decrements on the defined benefit obligations is not straight forward and depends upon the combination of salary increase, discount rate and vesting criterion.
Medical Inflation rate risk	Higher than expected increase in salary and medical cost will increase the defined benefit obligation.
Change in Leave Balances	This is the risk of variability of results due to a significant variation from expected accumulation of leave balances. All other aspects remaining same, higher than expected increase in the leave balances will increase the defined benefit obligation.

(iv) The principal assumptions used for the purposes of the actuarial valuations were as follows:

S. No.	Particulars	Refer note below	As at 31st March, 2021	As at 31st March, 2020
i.	Discount rate (p.a)	1	6.60%	6.50%
ii.	Salary escalation rate (p.a)	2		
	Management		7.00%	7.00%
	Non-Management		5.00%	5.00%
iii.	Retirement Age		60 years	60 years
iv.	Mortality Table		Indian Assured Lives Mortality (2006-08) Ult	Indian Assured Lives Mortality (2006-08) Ult
v.	Withdrawal Rate			
	Management: 21-44 years		6.00%	6.00%
	45 years and above		2.00%	2.00%
	Non-Management		0.50%	0.50%
vi.	Rate of Gold Inflation		8.00%	8.00%
vii.	Rate of Medical inflation (p.a)		8.00%	8.00%

Note:
1. The discount rate is based on the prevailing market yields of Indian Government securities as at the balance sheet date for the estimated term of obligations
2. The gratuity plan is funded
3. The estimates of future salary increases considered take into account the inflation, seniority, promotion and other relevant factors.

ii. Remeasurement on the net defined benefit liability:

Particulars	For Year ended 31st March,2021 ₹ crores	For Year ended 31st March, 2020 ₹ crores
Actuarial (gain)/Loss due to DBO Experience	(0.45)	(0.32)
Actuarial (gain)/Loss due to assumption changes	(0.12)	0.75
Actuarial (gain)/loss arising during period	(0.57)	0.42
Return on plan assets (greater)/less than discounting rate	0.04	(0.03)
Component of defined benefit costs recognized in Other Comprehensive Income	**(0.52)**	**0.40**

Note:

1) The current service cost and the net interest expense for the year are included in the 'Employee benefits expense ' in the Statement of Profit and Loss.

2) The remeasurement of the net defined benefit liability is included in the other comprehensive income.

iii. The amount included in the Balance Sheet arising from the entity's obligation in respect of its defined benefits plans as follows:

Particulars	For Year ended 31st March,2021 ₹ Crores	For Year ended 31st March,2020 ₹ Crores
Present value of funded defined benefit obligation	(11.72)	(12.42)
Fair value of plan assets	13.66	12.87
Funded status surplus/(deficit)	**1.94**	**0.45**

iv. Movement in the fair value of the defined benefit obligation:

Particulars	For Year ended 31st March,2021 ₹ crores	For Year ended 31st March, 2020 ₹ crores
Opening defined benefit obligation	12.42	11.00
Current service cost	1.16	1.06
Interest cost on defined benefit obligation	0.80	0.81
Acquisitions (credit) / cost	(1.81)	(0.79)
Actuarial (gains) / loss arising from changes in demographic assumptions	-	(0.35)
Actuarial (gains) / loss arising from changes in experience	(0.45)	(0.32)
Actuarial (gains) / loss arising from changes in financial assumption	(0.12)	1.10
Benefits paid directly by the company	(0.28)	(0.09)
Closing defined benefit obligations	**11.72**	**12.42**

S R Batliboi & Co. LLP Kolkata

MAITHON POWER LIMITED

v. Movement in the fair value of the plan assets are as follows:

Particulars	For Year ended 31st March,2021 ₹ Crores	For Year ended 31st March,2020 ₹ Crores
Opening fair value of plan assets	12.87	10.46
Interest income on plan assets	0.84	0.83
Employer contributions	-	1.55
Return on plan assets (greater)/less than discounting rate	(0.04)	0.03
Benefits paid	-	-
Closing fair value of plan assets	**13.66**	**12.87**

Note:

1) The plan assets of the Company managed through a trust are managed by Birla Sun Life Insurance (BSLI) Company Limited. The details of investments relating to these assets are not shown by BSLI. Hence, the composition of each major category of plan assets, the percentage or amount that each major category constitutes to the fair value of the total plan assets has not been disclosed.

2) The Company expects to make a contribution of ₹ Nil (as at 31 March, 2020: Nil) to defined benefit plan during the next financial year.

vi. Sensitivity analysis

Significant actuarial assumptions for the determination of the defined benefit obligation are discount rate, expected salary increase and mortality. The sensitivity analysis below have been determined based on reasonably possible changes of the assumptions occurring at the end of the reporting period, while holding all other assumptions constant.

The sensitivity of the defined benefit obligation to changes in the weighted principal assumptions is:

Particulars	31st March,2021 ₹ Crores		31st March,2020 ₹ Crores	
	Increase	Decrease	Increase	Decrease
Discount Rate (-/+0.5%)	0.61	-0.56	0.68	-0.63
Salary Growth Rate (+/-0.5%)	0.60	-0.56	0.68	-0.63
Withdrawal Rate (-/+ 5%)	0.00	-0.77	0.00	-0.93

The sensitivity analysis presented above may not be representative of the actual change in the defined benefit obligation as it is unlikely that the change in assumptions would occur in isolation of one another as some of the assumptions may be correlated.

Furthermore, in presenting the above sensitivity analysis, the present value of the defined benefit obligation has been calculated using the projected unit credit method at the end of the reporting period, which is the same as that applied in calculating the defined benefit liability recognized in the Balance sheet.

There was no change in the methods and assumptions used in preparing the sensitivity analysis from prior years.

vii. The expected maturity analysis of defined benefit obligation is as follows:

Time Period	31st March,2021 ₹ Crores	31st March,2020 ₹ Crores
Within 1 year	0.42	0.43
Between 1-2 years	0.48	0.63
Between 2-3 years	0.96	0.54
Between 3-4 years	1.15	1.02
Between 4-5 years	1.87	1.23
Beyond 5 years	8.05	9.52

Particulars	31st March,2021	31st March,2020
The weighted average duration of the defined benefit plan obligation represents average duration for active members	7.4 years	7.4 years

S R Batliboi & Co. LLP Kolkata

MAITHON POWER LIMITED

19.4 Other Defined benefit plans

The amounts recognized in the financial statements and the movements in the net defined benefit obligations over the year are as follows:

i. Amounts recognized in the Statement of Profit and Loss in respect of these defined benefits plans are as follows:

Particulars	For Year ended 31st March,2021 ₹ crores	For Year ended 31st March, 2020 ₹ crores
Current service cost	0.80	0.99
Past Service Cost	-	0.19
Net interest expenses	0.57	0.70
Actuarial (Gain)/ Loss	0.11	(1.20)
Components of defined benefit costs recognized in profit or loss	**1.48**	**0.68**

ii. Remeasurement on the net defined benefit liability:

Particulars	For Year ended 31st March,2021 ₹ crores	For Year ended 31st March, 2020 ₹ crores
Actuarial (gain)/Loss due to Defined Benefit Obligation Experience	(0.58)	(1.56)
Actuarial (gain)/Loss due to assumption Changes	(0.04)	(0.04)
Component of defined benefit costs recognized in Other Comprehensive Income	**(0.62)**	**(1.60)**

Note:

1) The current service cost and the net interest expense for the year are included in the 'Employee benefits expense ' in the Statement of Profit and Loss.

2) The remeasurement of the net defined benefit liability is included in the other comprehensive income.

20. Deferred Tax Assets / Liabilities (Net)

Accounting Policy

Deferred Tax

Deferred tax is recognised on temporary differences between the carrying amounts of assets and liabilities in the financial statements and the corresponding tax bases used in the computation of taxable profit. Deferred tax liabilities are generally recognised for all taxable temporary differences. Deferred tax assets are generally recognised for all deductible temporary differences to the extent that it is probable that taxable profits will be available against which those deductible temporary differences can be utilised. Such deferred tax assets and liabilities are not recognised if the temporary difference arises from the initial recognition of assets and liabilities in a transaction that affects neither the taxable profit nor the accounting profit.

The carrying amount of deferred tax assets is reviewed at each reporting date and reduced to the extent that it is no longer probable that sufficient taxable profit will be available to allow all or part of the deferred tax asset to be utilised. Unrecognised deferred tax assets are re-assessed at each reporting date and are recognised to the extent that it has become probable that future taxable profits will allow the deferred tax asset to be recovered.

Deferred tax liabilities and assets are measured at the tax rates that are expected to apply in the period in which the liability is settled or the asset realised, based on tax rates (and tax laws) that have been enacted or substantively enacted by the end of the reporting period.

For operations carried out under tax holiday period (80IA benefits of Income Tax Act, 1961), deferred tax assets or liabilities, if any, have been established for the tax consequences of those temporary differences between the carrying values of assets and liabilities and their respective tax bases that reverse after the tax holiday ends.

Deferred tax relating to items recognised outside profit or loss is recognised outside profit or loss (either in other comprehensive income or in equity). Deferred tax items are recognised in correlation to the underlying transaction either in OCI or directly in equity.

Deferred tax assets and liabilities are offset when they relate to income taxes levied by the same taxation authority and the relevant entity intends to settle its current tax assets and liabilities on a net basis.

Deferred tax assets include Minimum Alternative Tax (MAT) paid in accordance with the tax laws in India, which is likely to give future economic benefits in the form of availability of set off against future income tax liability. Accordingly, MAT is recognised as deferred tax asset in the balance sheet when the asset can be measured reliably and it is probable that the future economic benefit associated with the asset will be realised. The Company reviews the "MAT credit entitlement" asset at each reporting date and writes down the asset to the extent that it is no longer probable that it will pay normal tax during the specified period.

In the situations where one or more units of the Company are entitled to a tax holiday under the tax law, no deferred tax (asset or liability) is recognized in respect of temporary differences which reverse during the tax holiday period, to the extent the concerned unit's gross total income is subject to the deduction during the tax holiday period. Deferred tax in respect of temporary differences which reverse after the tax holiday period is recognized in the year in which the temporary differences originate. However, the Company restricts recognition of deferred tax assets to the extent it is probable that sufficient future taxable income will be available against which such deferred tax assets can be realized. For recognition of deferred taxes, the temporary differences which originate first are considered to reverse first.

Deferred tax assets are recognised for unused tax losses to the extent that it is probable that taxable profit will be available against which the losses can be utilised. Significant management judgement is required to determine the amount of deferred tax assets that can be recognised, based upon the likely timing and the level of future taxable profits together with future tax planning strategies.

MAT Credit Entitlement

Minimum alternate tax (MAT) paid in a year is charged to the statement of profit and loss as current tax for the year. The deferred tax asset is recognised for MAT credit available only to the extent that it is probable that the Company will pay normal income tax during the specified period, i.e., the period for which MAT credit is allowed to be carried forward. In the year in which the Company recognizes MAT credit as an asset, it is created by way of credit to the statement of profit and loss and shown as part of deferred tax asset. The Company reviews the "MAT credit entitlement" asset at each reporting date.

S R Batliboi & Co. LLP Kolkata

MAITHON POWER LIMITED

Note:

a. Deferred tax assets and liabilities are being offset as they relate to taxes on income levied by the same governing taxation laws.

b. The Company is entitled for availing the tax benefit under section 80IA of the Income-tax Act, 1961, with effect from the financial year 2016-17 for 10 years. Deferred tax liabilities as at 31 March, 2021, reflect the quantum of tax liabilities accrued upto the period end but payable after the expiry of the tax holiday period.

c. The Company has recognised MAT credit entitlement of ₹ 418.68 crores as at March 31, 2021 (as at March 31, 2020: ₹ 369.39 crores). Basis the existing tax laws and the projections of future profitability considering definitive Power purchase agreements which are completely tied up with the plant capacity, the management is confident of earning taxable profits each year and will be able to utilise the entire amount of MAT credit entitlement recognised in the financial Statement.

24. Revenue from Operations

Accounting Policy

Revenue recognition
Revenue from contracts with customers is recognised when control of the goods or services are transferred to the customer at an amount that reflects the consideration to which the Company expects to be entitled in exchange for those goods or services.

Description of performance obligations are as follows :

Sale of Power - Generation (Thermal)
Revenue from sale of power is recognised net of cash discount over time for each unit of electricity delivered.

Contract price determined as per tariff regulations
The Company as per the prevalent tariff regulations is required to recover its Annual Revenue Requirement ('ARR') comprising of expenditure on account of fuel cost, operations and maintenance expenses, financing costs, taxes and assured return on regulator approved equity with additional incentive for operational efficiencies. Accordingly, rate per unit is determined using input method based on the Company's efforts to the satisfaction of a performance obligation to deliver power. As per tariff regulations, the Company determines ARR and any surplus/shortfall in recovery of the same is accounted as revenue.

Late Payment Surcharge
Late payment surcharge leviable as per the relevant contracts are recognised on actual realisation or accrued based on an assessment of certainty of realization supported by either an acknowledgement from customers or on receipt of favourable order from regulator / authorities.

No Late Payment Surcharge ('LPS') is charged for the initial 45 days from the date of receipt of invoice by customer. Thereafter, LPS is charged at the rate prescribed by the Power Purchase Agreement on the outstanding balance once the dues are received. Revenue in respect of late payment surcharge leviable as per the relevant contracts are recognised on actual realisation or accrued based on an assessment of certainty of realization supported by either an acknowledgement from customers or on receipt of favourable order from regulatory authorities.

Dividend and interest income
Dividend income from investments is recognized when the shareholder's right to receive payment has been established.

Interest income from a financial asset is recognized when it is probable that the economic benefits will flow to the Company and the amount of income can be measured reliably. Interest income is accrued on a time basis, by reference to the principal outstanding and at the effective interest rate applicable, which is the rate that exactly discounts estimated future cash receipts through the expected life of the financial asset to that asset's net carrying amount on initial recognition.

30. Income taxes

Accounting Policy

Current Tax

Current income tax assets and liabilities are measured at the amount expected to be recovered from or paid to the taxation authorities. The tax rates and tax laws used to compute the amount are those that are enacted or substantively enacted, at the reporting date in the countries where the Company operates and generates taxable income.

Current income tax relating to items recognised outside statement of profit and loss is recognised outside statement of profit and loss (either in other comprehensive income or in equity). Current tax items are recognised in correlation to the underlying transaction either in other comprehensive income or directly in equity. Management periodically evaluates positions taken in the tax returns with respect to situations in which applicable tax regulations are subject to interpretation and establishes provisions where appropriate.

(i) Income tax recognised in profit and loss

Current tax

MAITHON POWER LIMITED

32. **Contingent liabilities**

(a) The Company has received a demand of ₹ 45.00 crores from the Office of Assistant Commissioner, Dhanbad under the Building and other Construction Workers (Regulation of Employment and Conditions of Service) Act, 1996 contending that the Company has to pay 1% of the Project Cost (estimated to be ₹ 4500.00 crores) as cess.

As per legal advice obtained by the Company, the Construction Workers (Regulation of Employment and Conditions of Service) Act, 1996 is applicable on cost of construction and not on supply of equipment, accordingly the Company had deposited an amount of ₹ 1.26 crores as cess for cost of construction and raised the demand on the concerned contractor / vendor. Further, the Company is of the view that any such demand if payable will be borne by the contractor/vendors. Accordingly, no provision has been made in the books of account.

(b) Claims against the Company not acknowledged as debts for demands raised by the office of the Zonal Jt. Director General Trade for revocation of grant of deemed export benefits which has been disputed by the Company ₹ 36.41 crores (31 March, 2020 : ₹ 36.41 crores).

(c) The Code on Social Security 2020 has been notified in the Official Gazette on 29th September, 2020. The effective date from which the changes are applicable is yet to be notified and the rules are yet to be framed. Impact if any of the change will be assessed and accounted in the period in which said Code becomes effective and the rules framed thereunder are notified

33. **Earnings per share (EPS)**

Accounting Policy

Basic earnings per equity share is computed by dividing the net profit attributable to the equity holders of the Company by the weighted average number of equity shares outstanding during the period. Diluted earnings per equity share is computed by dividing the net profit attributable to the equity holders of the Company by the weighted average number of equity shares considered for deriving basic earnings per equity share and also the weighted average number of equity shares that could have been issued upon conversion of all dilutive potential equity shares. The dilutive potential equity shares are adjusted for the proceeds receivable had the equity shares been actually issued at fair value (i.e.the average market value of the outstanding equity shares). Dilutive potential equity shares are deemed converted as of the beginning of the period, unless issued at a later date. Dilutive potential equity shares are determined independently for each period presented.

The number of equity shares and potentially dilutive equity shares are adjusted retrospectively for all periods presented for any share splits and bonus shares issues including for changes effected prior to the approval of the financial statements by the Board of Directors.

	For Year ended 31st March,2021 ₹ Crores	For Year ended 31st March,2020 ₹ Crores
Basic and diluted earnings per share (face value of ₹ 10 each)	2.06	2.24
Basic and diluted earnings per share	**2.06**	**2.24**

The earnings and weighted average number of equity shares used in the calculation of basic and diluted earnings per share are as follows:

Profit After Tax	311.02	337.82
The weighted average number of equity shares for Basic and Diluted EPS	1,50,89,17,729	1,50,89,17,729

Note:
There have been no other transactions involving Equity Shares or Potential Equity Shares between the Reporting date and the date of authorisation of these financial statements.

35. Financial Instruments

This section gives an overview of the significance of financial instruments for the company and provides additional information on balance sheet items that contain financial instruments.

The details of significant accounting policies, including the criteria for recognition, the basis of measurement and the basis on which income and expenses are recognised in respect of each class of financial asset, financial liability and equity instrument are disclosed in the financial statements.

35.1 Financial assets and liabilities

The carrying value and fair value of financial instruments by categories as of 31st March,2021 is as follows:

₹ Crores

Particulars	Fair Value through P&L	Fair Value through OCI	Amortised Cost	Total Carrying value	Total Fair Value
Assets					
Cash and Cash Equivalents	-	-	67.34	67.34	67.34

Total	**-**	**-**	**2,017.32**	**2,017.32**	**2,017.32**

The carrying value and fair value of financial instruments by categories as of 31st March,2020 is as follows:

Assets					
Cash and Cash Equivalents	-	-	84.65	84.65	84.65
Trade Receivables	-	-	217.71	217.71	217.71
Investments	166.33	-	-	166.33	166.33
Unbilled Revenues	-	-	31.77	31.77	31.77
Loans	-	-	0.21	0.21	0.21
Other Financial Assets	-	-	0.41	0.41	0.41
Total	**166.33**	**-**	**334.75**	**501.08**	**501.08**
Liabilities:					
Trade Payables	-	-	169.20	169.20	169.20
Fixed Rate Borrowings (Includes Current Maturities)	-	-	498.74	498.74	498.74
Floating Rate Borrowings (Includes Current Maturities)	-	-	1,575.10	1,575.10	1,575.10
Other Financial Liabilities	-	-	68.34	68.34	68.34
Total	**-**	**-**	**2,311.38**	**2,311.38**	**2,311.38**

The management assessed that the fair value of cash and cash equivalents, other balances with bank, trade receivables, loans,unbilled revenues, trade payables, other financial assets and liabilities approximate their carrying amounts largely due to the short term maturities of these instruments.

The fair value of the financial assets and liabilities is included at the amount at which the instrument could be exchanged in a current transaction between willing parties. The following methods and assumptions were used to estimate the fair values.

Fair value hierarchy

The fair value hierarchy is based on inputs to valuation techniques that are used to measure fair value that are either observable or unobservable and consists of the following three levels:

Quoted prices in an active market (Level 1): Inputs are quoted prices (unadjusted) in active markets for identical assets or liabilities.

Valuation techniques with observable inputs (Level 2): Inputs are other than quoted prices included within Level 1 that are observable for the asset or liability, either directly (i.e. as prices) or indirectly (i.e. derived from prices).

Valuation techniques with significant unobservable inputs (Level 3): Inputs are not based on observable market data (unobservable inputs). Fair values are determined in whole or in part using a valuation model based on assumptions that are neither supported by prices from observable current market transactions in the same instrument nor are they based on available market data.

The following table provides the fair value measurement hierarchy of the Company's assets and liabilities.

S R Batliboi & Co. LLP Kolkata

MAITHON POWER LIMITED

	Date of valuation	Fair value hierarchy as at 31st March,2021

There has been no transfer between level 1 and level 2 during the year

35.2 Capital Management & Gearing Ratio

For the purpose of the Company's capital management, capital includes issued equity capital and all other equity reserves attributable to the equity holders of the Company. The primary objective of the Company's capital management is to maximize the value for shareholders.

The Company manages its capital structure and makes adjustments in light of changes in economic conditions and the requirements of the financial covenants. From time to time, the Company reviews its policy related to dividend payment to shareholders, return capital to shareholders or fresh issue of shares. The Company monitors capital using gearing ratio, which is net debt divided by total capital plus net debt. The Company's policy is to keep the gearing ratio around 50%. The Company includes within net debt, interest bearing loans and borrowings, less cash and bank balances, excluding discontinued operations as detailed in the notes below.

The Company's capital management is intended to create value for shareholders by facilitating the meeting of its long-term and short-term goals. Its Capital structure consists of net debt (borrowings as detailed in notes below) and total equity.

Gearing ratio

The gearing ratio at the end of the reporting year was as follows:

		₹ crore
	As at 31st March,2021	***As at 31st March,2020***
Debt (i)	*1,778.41*	*2,073.84*
Less: Cash and Bank balances	*67.34*	*84.65*
Net debt	**1,711.07**	***1,989.19***
Total Capital (ii)	*2,200.39*	*2,068.43*
Capital and net debt	**3,911.46**	***4,057.62***
Gearing ratio (%)	43.75	*49.02*

(i) Debt is defined as Non-current borrowings (including current maturities) and Current borrowings (excluding derivative, financial guarantee contracts and contingent considerations) and interest accrued on Non-current and Current borrowings.

(ii) Equity is defined as Equity share capital and other equity including reserves and surplus.

In order to achieve this overall objective, the Company's capital management, amongst other things, aims to ensure that it meets financial covenants attached to the interest-bearing loans and borrowings that define capital structure requirements. Breaches in meeting the financial covenants would permit the bank to immediately call loans and borrowings. There have been no significant breaches in the financial covenants of any interest-bearing loans and borrowing in the current year.

No changes were made in the objectives, policies or processes for managing capital during the years ended 31st March, 2021 and 31st March, 2020.

S R Batliboi & Co. LLP Kolkata

MAITHON POWER LIMITED

35. Financial Instruments

35.3 Financial risk management objectives and policies

The Company's principal financial liabilities, comprise borrowings, trade and other payables and other financial liabilities. The main purpose of these financial liabilities is to finance the Company's operations and to provide guarantees to support its operations. The Company's principal financial assets include investments, loans, trade and other receivables, cash and cash equivalents, other bank balances, unbilled receivables and other financial assets that derive directly from its operations.

The Company is exposed to market risk, credit risk and liquidity risk. The Company's senior management oversees the management of these risks. The Company's senior management is supported by a risk committee that reviews the financial risks and the appropriate financial risk governance framework for the Company. The Company's financial risk activities are governed by appropriate policies and procedures and that financial risks are identified, measured and managed in accordance with the Company's policies and risk objectives. The risk management polices is approved by the board of directors, which is summarized below.

35.3.1 Market risk management

Market risk is the risk that the fair value of future cash flows of a financial instrument will fluctuate because of changes in market prices. Market risk comprises of three types of risk: currency risk, interest rate risk and equity price risk. The impact of equity price risk and currency risk is not material. Financial instruments affected by market risk are loans and borrowings.

The sensitivity analysis in the following sections relate to the position as at 31st March, 2021 and 31st March, 2020.

a) Foreign currency risk management

(i) The year end foreign currency exposures of the Company is Nil (31 March, 2020: Nil)

(ii) The Company did not have any long term contract including derivative contract for which there were any material foreseeable losses.

b) Interest rate risk management

Interest rate risk is the risk that the fair value or future cash flows of a financial instrument will fluctuate because of changes in market interest rates. The Company's exposure to the risk of changes in market interest rates relates primarily to the company's long-term debt obligations with floating interest rates.

The Company manages its interest rate risk by having a balanced portfolio of fixed and variable rate loans and borrowings.The exposure of the Company's borrowings to interest rate changes at the end of the reporting period are as follows :

Particulars	31st March,2021		31st March,2020	
	Balance	Percentage	Balance	Percentage
Fixed Rate Borrowings (Includes Current Maturities)	712.74	40%	498.74	24%
Floating Rate Borrowings (Includes Current Maturities)	1,065.67	60%	1,575.10	76%
Total	**1,778.41**		**2,073.84**	

Interest rate sensitivity:

The sensitivity analysis below have been determined based on exposure to interest rates for term loans and debentures at the end of the reporting period and the stipulated change taking place at the beginning of the financial year and held constant throughout the reporting period in case of term loans and debentures that have floating rates.

If the interest rates had been 50 basis points higher or lower and all the other variables were held constant, the effect on Interest expense for the respective financial years and consequent effect on Company's profit in that financial year would have been as below:

Particulars	31st March,2021		31st March,2020	
	50 bps increase	50 bps decrease	*50 bps increase*	*50 bps decrease*
Interest expense on loan	(+) ₹ 5.33	(-) ₹ 5.33	(+) ₹ 7.82	(-) ₹ 7.82
Effect on profit before tax	(-) ₹ 5.33	(+) ₹ 5.33	(-) ₹ 7.82	(+) ₹ 7.82

S R Batliboi & Co. LLP Kolkata

MAITHON POWER LIMITED

35.3.2 Credit risk management

Credit risk is the risk that counterparty will not meet its obligations under a financial instrument or customer contract, leading to a financial loss. The Company is exposed to credit risk from its operating activities (i.e.primarily trade receivables and unbilled revenue) and from its financing activities including loans, foreign exchange transactions and other financial instruments.

Collateral held as security

The Company holds collateral i.e. letter of credit and bank guarantee to partly secure its outstanding trade receivables. Credit risk associated with receivables is mitigated because the receivables are partly secure.

₹ crore

	31st March,2021	31st March,2020
Trade Receivables	30.14	217.71
Loans	200.18	0.21
Other Financial Assets	1.59	0.41
Unbilled Revenue	40.61	31.77
Total	**272.52**	***250.10***

Refer Note 13 for credit risk and other information in respect of trade receivables. Other receivables as stated above are due from the parties under normal course of the business and as such the Company believes exposure to credit risk to be minimal.

35.3.3 Liquidity risk management

Liquidity risk is the risk that the company will encounter difficulty in meeting obligation, associated with financial liabilities that are settled by delivering cash or another financial asset.

The Company manages liquidity risk by maintaining adequate reserves, banking facilities and reserve borrowing facilities, by continuously monitoring forecast and actual cash flows and matching the maturity profiles of financial assets and liabilities. The Company has access to a sufficient variety of sources of funding. Having regards to the nature of the business wherein the Company is able to generate fixed cash flows over a period of time and to optimize the cost of funding, the Company, from time to time, funds its long -term investment from short-term sources. The short-term borrowings can be rollforward or, if required, can be refinanced from long term borrowings.

	Up to 1 year	1 to 5 years	5+ years	Total	Carrying Amount
31st March,2021					
Non-Derivatives					
Borrowings #	339.92	1,331.55	452.43	**2,123.90**	**1,801.60**
Trade Payables	124.98	-	-	**124.98**	**124.98**
Other Financial Liabilities	72.27	18.47	-	**90.74**	**90.74**
Total Non-Derivative Liabilities	**537.17**	**1,350.02**	**452.43**	**2,339.62**	**2,017.32**
31st March,2020					
Borrowings #	1,009.39	1,301.89	295.52	**2,606.80**	**2,101.89**
Trade Payables	169.20	-	-	**169.20**	**169.20**
Other Financial Liabilities	28.41	11.88	-	**40.29**	**40.29**
Total Non-Derivative Liabilities	**1,207.00**	**1,313.77**	**295.52**	**2,816.29**	**2,311.38**

The table has been drawn up based on the undiscounted contractual maturities of the financial liabilities including interest that will be paid on those liabilities upto the maturity of the instruments,

35.4 Commodity price risk

The operating activity of the company involves generation of power and therefore requires continuous supply of coal. The company has entered into fuel supply agreements with Central Coalfields Limited and Bharat Coking Coal Limited and any price fluctuation is passed on to the customers

S R Batliboi & Co. LLP Kolkata

MAITHON POWER LIMITED

36. There were no amounts which were required to be transferred to the Investor Education and Protection Fund by the Company.

37. **Segment Reporting**

The Company is mainly engaged in the business of generation and selling of power in India. Based on the information reported to the chief operating decision maker (CODM) for the purpose of resource allocation and assessment of performance, there are no reportable segments in accordance with the requirements of Indian Accounting Standard 108- 'Operating Segments', notified under the Companies (Indian Accounting Standards) Rules, 2015.

38. **Mega power status**

The Company had applied to the Ministry of Power, Government of India along with necessary documents for grant of Mega Power Status to the Company's 1050 MW Maithon Right Bank Thermal Power Plant. Pending receipt of the mega power certificate, the Company remains liable to pay excise and customs duty on its receipts of goods and materials wherever applicable. Accordingly, the Company had paid excise duty to its vendors aggregating to ₹ 120.24 crores (31 March, 2020: ₹ 120.24 crores) upto 31 March, 2021. The total payment of excise duty to suppliers has been capitalized as at 31st March, 2021.

39. **Significant Events after the Reporting Period**

There were no significant adjusting event that occurred subsequent to the reporting period.

40. Previous year's figures are regrouped / rearranged, where necessary, to confirm to the current year's presentation.

INDEPENDENT AUDITOR'S REPORT

To the Members of Maithon Power Limited

Report on the Audit of the Financial Statements

Opinion

We have audited the accompanying financial statements of Maithon Power Limited ("the Company"), which comprise the Balance sheet as at March 31 2022, the Statement of Profit and Loss, including the statement of Other Comprehensive Income, the Statement of cash flows and the Statement of Changes in Equity for the year then ended, and notes to the financial statements, including a summary of significant accounting policies and other explanatory information.

In our opinion and to the best of our information and according to the explanations given to us, the aforesaid financial statements give the information required by the Companies Act, 2013, as amended ("the Act") in the manner so required and give a true and fair view in conformity with the accounting principles generally accepted in India, of the state of affairs of the Company as at March 31, 2022, its profit including other comprehensive income, its cash flows and the changes in equity for the year ended on that date.

Basis for Opinion

We conducted our audit of the financial statements in accordance with the Standards on Auditing (SAs), as specified under section 143(10) of the Act. Our responsibilities under those Standards are further described in the 'Auditor's Responsibilities for the Audit of the Financial Statements' section of our report. We are independent of the Company in accordance with the 'Code of Ethics' issued by the Institute of Chartered Accountants of India together with the ethical requirements that are relevant to our audit of the financial statements under the provisions of the Act and the Rules thereunder, and we have fulfilled our other ethical responsibilities in accordance with these requirements and the Code of Ethics. We believe that the audit evidence we have obtained is sufficient and appropriate to provide a basis for our audit opinion on the financial statements.

Key Audit Matters

Key audit matters are those matters that, in our professional judgment, were of most significance in our audit of the financial statements for the financial year ended March 31, 2022. These matters were addressed in the context of our audit of the financial statements as a whole, and in forming our opinion thereon, and we do not provide a separate opinion on these matters. For each matter below, our description of how our audit addressed the matter is provided in that context.

We have determined the matters described below to be the key audit matters to be communicated in our report. We have fulfilled the responsibilities described in the Auditor's responsibilities for the audit of the financial statements section of our report, including in relation to these matters. Accordingly, our audit included the performance of procedures designed to respond to our assessment of the risks of material misstatement of the financial statements. The results of our audit procedures, including the procedures performed to address the matters below, provide the basis for our audit opinion on the accompanying financial statements.

S.R. Batliboi & Co. LLP Kolkata

Key audit matters	How our audit addressed the key audit matter
Accrual of Recoverable from Beneficiaries/Payable to Beneficiaries for items which are subject matter of true up in tariff orders *(as described in note 24 of the financial statements)*	
The Company's revenue recognition is guided by the tariff norms prescribed by the Central Electricity Regulatory Commission (CERC) guidelines and the tariff orders passed based on these regulations. Consequently, Recoverable from Beneficiaries/Payable to Beneficiaries is recognized for items which are subject matter of true up in tariff orders to be notified in future years. Judgement is exercised by management in estimating recoverability / payability of such other assets and liabilities in the books. As on 31st March 2022, the Company is carrying an amount of Rs. 221.53 crores as Payable to Beneficiaries (Net of Recoverable from Beneficiaries of Rs 21.84 crores) which is material to the financial statements of the Company. Considering the judgements involved in the estimates of various elements of capital and operational costs used in the computation of revenue as per applicable regulations and the amount involved we have determined this to be a key audit matter.	Following procedures have been performed to address this key audit matter:- 1. We have tested the design and operating effectiveness of key controls related to the estimation and recoverability of such Recoverable from Beneficiaries/Payable to Beneficiaries. 2. We have evaluated the estimation by management of these Recoverable from Beneficiaries/Payable to Beneficiaries with reference to Tariff Regulations and the tariff orders of earlier years, including the orders received during the year, on similar matters and also the underlying records of the Company. 3. We discussed with management to understand their assessment on each of the qualitative factors and ensured consistency of the management's explanation with the underlying documentation, rules and regulations. 4. We have re-calculated the workings obtained from the management to check the arithmetical accuracy of the calculations. 5. We have also checked the adequacy of the disclosure on these matters in the financial statements of the Company. 6. We have also obtained necessary management representation.
Recoverability of MAT Credit Entitlement in future *(as described in note 23c of the financial statements)*	
The Company does not have taxable income owing to benefits of section 80IA of Income Tax Act, 1961 and therefore it has been paying Minimum Alternate Tax (MAT) under the relevant provisions of the Income Tax Act, 1961. The Act also provides that such MAT paid can be carried forward (MAT credit entitlement) for set off against regular tax payable in subsequent fifteen years period. Such MAT credit entitlements are recognized when it is probable that	Following procedures have been performed to address this key audit matter:- 1. We have tested the design and operating effectiveness of key controls related to the computation and recognition of such MAT credit. 2. We have assessed the methodology applied by the Company with current accounting standards and applicable taxation laws along with the future business forecast of taxable profits. 3. We have assessed the likelihood of the Company to utilize the available MAT credit entitlements in the future with underlying projections and assumptions relating to future estimated profits, future

S.R. Batliboi & Co. LLP Kolkata

Key audit matters	How our audit addressed the key audit matter
normal taxable profit will be available against which these MAT credits can be utilized. The Company's ability to recognize these MAT credit assets is assessed by management at the end of each reporting period, taking into account forecasts of future taxable profits and the law and jurisdiction of the land in force. The assumptions on these projections are determined by management. At March 31, 2022, MAT credit entitlement recognized in the Company's financial statements amounts to Rs. 463.23 crores. Given the degree of judgment involved in making a forecast of the profitability of the Company and the materiality of the amounts involved, we considered this to be a key audit matter.	capitalization and depreciation allowance thereon and future estimates of taxable income. 4. We have tested the arithmetical accuracy of the future taxability workings prepared by the management. 5. We have also checked the adequacy of the disclosure on these matters in the financial statements of the Company. 6. We have also obtained necessary management representation.

Information Other than the Financial Statements and Auditor's Report Thereon

The Company's Board of Directors is responsible for the other information. The other information comprises the information included in the Annual report, but does not include the financial statements and our auditor's report thereon.

Our opinion on the financial statements does not cover the other information and we do not express any form of assurance conclusion thereon.

In connection with our audit of the financial statements, our responsibility is to read the other information and, in doing so, consider whether such other information is materially inconsistent with the financial statements or our knowledge obtained in the audit or otherwise appears to be materially misstated. If, based on the work we have performed, we conclude that there is a material misstatement of this other information, we are required to report that fact. We have nothing to report in this regard.

Responsibilities of Management for the Financial Statements

The Company's Board of Directors is responsible for the matters stated in section 134(5) of the Act with respect to the preparation of these financial statements that give a true and fair view of the financial position, financial performance including other comprehensive income, cash flows and changes in equity of the Company in accordance with the accounting principles generally accepted in India, including the Indian Accounting Standards (Ind AS) specified under section 133 of the Act read with the Companies (Indian Accounting Standards) Rules, 2015, as amended. This responsibility also includes maintenance of adequate accounting records in accordance with the provisions of the Act for safeguarding of the assets of the Company and for preventing and detecting frauds and other irregularities; selection and application of appropriate accounting policies; making judgments and estimates that are reasonable and prudent; and the design, implementation and maintenance of adequate internal financial controls, that were operating effectively for ensuring the accuracy and completeness

of the accounting records, relevant to the preparation and presentation of the financial statements that give a true and fair view and are free from material misstatement, whether due to fraud or error.

In preparing the financial statements, management is responsible for assessing the Company's ability to continue as a going concern, disclosing, as applicable, matters related to going concern and using the going concern basis of accounting unless management either intends to liquidate the Company or to cease operations, or has no realistic alternative but to do so.

Those Board of Directors are also responsible for overseeing the Company's financial reporting process.

Auditor's Responsibilities for the Audit of the Financial Statements

Our objectives are to obtain reasonable assurance about whether the financial statements as a whole are free from material misstatement, whether due to fraud or error, and to issue an auditor's report that includes our opinion. Reasonable assurance is a high level of assurance, but is not a guarantee that an audit conducted in accordance with SAs will always detect a material misstatement when it exists. Misstatements can arise from fraud or error and are considered material if, individually or in the aggregate, they could reasonably be expected to influence the economic decisions of users taken on the basis of these financial statements.

As part of an audit in accordance with SAs, we exercise professional judgment and maintain professional skepticism throughout the audit. We also:

- Identify and assess the risks of material misstatement of the financial statements, whether due to fraud or error, design and perform audit procedures responsive to those risks, and obtain audit evidence that is sufficient and appropriate to provide a basis for our opinion. The risk of not detecting a material misstatement resulting from fraud is higher than for one resulting from error, as fraud may involve collusion, forgery, intentional omissions, misrepresentations, or the override of internal control.
- Obtain an understanding of internal control relevant to the audit in order to design audit procedures that are appropriate in the circumstances. Under section 143(3)(i) of the Act, we are also responsible for expressing our opinion on whether the Company has adequate internal financial controls with reference to financial statements in place and the operating effectiveness of such controls.
- Evaluate the appropriateness of accounting policies used and the reasonableness of accounting estimates and related disclosures made by management.
- Conclude on the appropriateness of management's use of the going concern basis of accounting and, based on the audit evidence obtained, whether a material uncertainty exists related to events or conditions that may cast significant doubt on the Company's ability to continue as a going concern. If we conclude that a material uncertainty exists, we are required to draw attention in our auditor's report to the related disclosures in the financial statements or, if such disclosures are inadequate, to modify our opinion. Our conclusions are based on the audit evidence obtained up to the date of our auditor's report. However, future events or conditions may cause the Company to cease to continue as a going concern.
- Evaluate the overall presentation, structure and content of the financial statements, including the disclosures, and whether the financial statements represent the underlying transactions and events in a manner that achieves fair presentation.

We communicate with those charged with governance regarding, among other matters, the planned scope and timing of the audit and significant audit findings, including any significant deficiencies in internal control that we identify during our audit.

We also provide those charged with governance with a statement that we have complied with relevant ethical requirements regarding independence, and to communicate with them all relationships and other matters that may reasonably be thought to bear on our independence, and where applicable, related safeguards.

From the matters communicated with those charged with governance, we determine those matters that were of most significance in the audit of the financial statements for the financial year ended March 31, 2022 and are therefore the key audit matters. We describe these matters in our auditor's report unless law or regulation precludes public disclosure about the matter or when, in extremely rare circumstances, we determine that a matter should not be communicated in our report because the adverse consequences of doing so would reasonably be expected to outweigh the public interest benefits of such communication.

Report on Other Legal and Regulatory Requirements

1. As required by the Companies (Auditor's Report) Order, 2020 ("the Order"), issued by the Central Government of India in terms of sub-section (11) of section 143 of the Act, we give in the "Annexure 1" a statement on the matters specified in paragraphs 3 and 4 of the Order.
2. As required by Section 143(3) of the Act, we report that:

   (a) Except of matters reported in clause (xi)(c) of Annexure 1 referred above, we have sought and obtained all the information and explanations which to the best of our knowledge and belief were necessary for the purposes of our audit;

   (b) In our opinion, proper books of account as required by law have been kept by the Company so far as it appears from our examination of those books;

   (c) The Balance Sheet, the Statement of Profit and Loss including the Statement of Other Comprehensive Income, the Cash Flow Statement and Statement of Changes in Equity dealt with by this Report are in agreement with the books of account;

   (d) In our opinion, the aforesaid financial statements comply with the Accounting Standards specified under Section 133 of the Act, read with Companies (Indian Accounting Standards) Rules, 2015, as amended;

   (e) On the basis of the written representations received from the directors as on March 31, 2022 taken on record by the Board of Directors, none of the directors is disqualified as on March 31, 2022 from being appointed as a director in terms of Section 164 (2) of the Act;

   (f) With respect to the adequacy of the internal financial controls with reference to these financial statements and the operating effectiveness of such controls, refer to our separate Report in "Annexure 2" to this report;

   (g) In our opinion, the managerial remuneration for the year ended March 31, 2022 has been paid / provided by the Company to its directors in accordance with the provisions of section 197 read with Schedule V to the Act;

(h) With respect to the other matters to be included in the Auditor's Report in accordance with Rule 11 of the Companies (Audit and Auditors) Rules, 2014, as amended in our opinion and to the best of our information and according to the explanations given to us:

i. The Company has disclosed the impact of pending litigations on its financial position in its financial statements – Refer Note 35 to the financial statements;

ii. The Company did not have any long-term contracts including derivative contracts for which there were any material foreseeable losses;

iii. There were no amounts which were required to be transferred to the Investor Education and Protection Fund by the Company.

iv. a) The management has represented that, to the best of its knowledge and belief, no funds have been advanced or loaned or invested (either from borrowed funds or share premium or any other sources or kind of funds) by the company to or in any other person or entity, including foreign entities ("Intermediaries"), with the understanding, whether recorded in writing or otherwise, that the Intermediary shall, whether, directly or indirectly lend or invest in other persons or entities identified in any manner whatsoever by or on behalf of the company ("Ultimate Beneficiaries") or provide any guarantee, security or the like on behalf of the Ultimate Beneficiaries;

b) The management has represented that, to the best of its knowledge and belief, no funds have been received by the company from any person or entity, including foreign entities ("Funding Parties"), with the understanding, whether recorded in writing or otherwise, that the company shall, whether, directly or indirectly, lend or invest in other persons or entities identified in any manner whatsoever by or on behalf of the Funding Party ("Ultimate Beneficiaries") or provide any guarantee, security or the like on behalf of the Ultimate Beneficiaries; and

c) Based on such audit procedures that were considered reasonable and appropriate in the circumstances, nothing has come to our notice that has caused us to believe that the representations under sub-clause (a) and (b) contain any material misstatement.

v. No dividend has been declared or paid during the year by the Company.

Annexure '1' referred to in paragraph under the heading "Report on other legal and regulatory requirements" of our report of even date

Re: Maithon Power Limited ("the Company")

In terms of the information and explanations sought by us and given by the company and the books of account and records examined by us in the normal course of audit and to the best of our knowledge and belief, we state that:

(i)(a)(A) The Company has maintained proper records showing full particulars, including quantitative details and situation of Property, Plant and Equipment.

(i)(a)(B) The Company has maintained proper records showing full particulars of intangibles assets.

(i)(b) The Company has verified part of its Property Plant and Equipment during the year in accordance with its regular programme of verification of these assets whereby all the assets are physically verified over a period of 3 years which, in our opinion, is reasonable having regard to the size of the Company and the nature of its assets. No material discrepancies were noticed on such verification.

(i)(c) The title deeds of immovable properties (other than properties where the Company is the lessee and the lease agreements are duly executed in favour of the lessee) disclosed in note 5.7 to the financial statements included in Property, Plant and Equipment are held in the name of the Company, except the following:

Description of Property	Amount in INR crores	Held in the name of	Whether promoter, director or their relative or employee	Period held – indicate range, where appropriate	Reason for not being held in the name of Company
Raiyati Land (Free hold) located at Maithon, Jharkhand.	159.80	Damodar Valley Corporation (DVC)	Promoter	December 2008	The process of Mutation in the name of Damodar Valley Corporation (DVC) is yet to be completed, due to which the title deed in the name of the company is pending to be transferred.
Railway Land (Freehold Land) located at Maithon, Jharkhand.	137.12	DVC	Promoter	October 2008 to March 2015	
Forest land (Leasehold) located at Maithon, Jharkhand	12.40	DVC	Promoter	May 2008	The draft lease agreement for execution of lease is awaited from the government and hence the lease deed is yet to be registered in the name of the Company.

S.R. Batliboi & Co. LLP Kolkata

GM land-Plant (Leasehold) located at Maithon, Jharkhand	7.06	DVC	Promoter	July 2010	The Company is yet to receive a demand from the Government of Jharkhand for execution of lease and hence the lease deed in the name of the Company is yet to be registered.
GM land-Railway (Leasehold) located at Maithon, Jharkhand	5.91	DVC	Promoter	July 2010	

(i)(d) The Company has not revalued its Property, Plant and Equipment (including Right of use assets) or intangible assets during the year ended March 31, 2022.

(i)(e) As represented to us by the management, there are no proceedings initiated or are pending against the Company for holding any benami property under the Prohibition of Benami Property Transactions Act, 1988 and rules made thereunder.

(ii)(a) The management has conducted physical verification of inventory at reasonable intervals during the year and no material discrepancies were noticed on such physical verification. In our opinion the coverage and the procedure of such verification by the management is appropriate.

(ii)(b) As disclosed in note 25 to the financial statements, the Company has been sanctioned working capital limits in excess of Rs. five crores in aggregate from banks during the year on the basis of security of current assets of the Company. The quarterly returns/statements filed by the Company with such banks are in agreement with the books of accounts of the Company. The Company does not have any sanctioned working capital limits from financial institutions.

(iii)(a) During the year the Company has not provided advances in the nature of loans, stood guarantee or provided security to companies, firms, Limited Liability Partnerships or any other parties. The Company has provided loan to a company as follows:

Particulars	Amount in INR crores
Aggregate amount granted/ provided during the year	
- Subsidiaries - Joint Ventures - Associates - Others	800.00
Balance outstanding as at balance sheet date in respect of above cases - Subsidiaries - Joint Ventures - Associates - Others	450.00

(iii)(b) During the year the Company has not provided guarantees and security and not granted advances in the nature of loans to companies, firms, Limited Liability Partnerships or any other parties. The investments made and the terms and conditions of the loans granted are not prejudicial to the Company's interest.

(iii)(c) The Company has not granted advances in the nature of loans to companies, firms, Limited Liability Partnerships or any other parties. The Company has granted loans during the year to a company where the schedule of repayment of principal and payment of interest has been stipulated and the repayment or receipts are regular.

(iii)(d) There are no amounts of loans and advances in the nature of loans granted to companies, firms, limited liability partnerships or any other parties which are overdue for more than ninety days.

(iii)(e) There were no loans or advance in the nature of loan granted to companies, firms, Limited Liability Partnerships or any other parties which was fallen due during the year, that have been renewed or extended or fresh loans granted to settle the overdues of existing loans given to the same parties.

(iii)(f) The Company has not granted any loans or advances in the nature of loans, either repayable on demand or without specifying any terms or period of repayment to companies, firms, Limited Liability Partnerships or any other parties. Accordingly, the requirement to report on clause 3(iii)(f) of the Order is not applicable to the Company.

(iv) There are no loans, investments, guarantees, and security in respect of which provisions of sections 185 and 186 of the Companies Act, 2013 are applicable and accordingly, the requirement to report on clause 3(iv) of the Order is not applicable to the Company.

(v) The Company has neither accepted any deposits from the public nor accepted any amounts which are deemed to be deposits within the meaning of sections 73 to 76 of the Companies Act, 2013 and the rules made thereunder, to the extent applicable. Accordingly, the requirement to report on clause 3(v) of the Order is not applicable to the Company.

(vi) We have broadly reviewed the books of account maintained by the Company pursuant to the rules made by the Central Government for the maintenance of cost records under section 148(1) of the Companies Act, 2013, related to the generation of electricity, and are of the opinion that prima facie, the specified accounts and records have been made and maintained. We have not, however, made a detailed examination of the same.

(vii)(a) The Company is regular in depositing with appropriate authorities undisputed statutory dues including goods and services tax, provident fund, employees' state insurance, income-tax, sales-tax, service tax, duty of customs, duty of excise, value added tax, cess and other statutory dues applicable to it. According to the information and explanations given to us and based on audit procedures performed by us, no undisputed amounts payable in respect of these statutory dues were outstanding, at the year end, for a period of more than six months from the date they became payable.

(vii)(b) There are no dues of goods and services tax, provident fund, employees' state insurance, income tax, sales-tax, service tax, customs duty, excise duty, value added tax, cess and other statutory dues which have not been deposited on account of any dispute.

(viii) As represented to us by the management, the Company has not surrendered or disclosed any transaction, previously unrecorded in the books of account, in the tax assessments under the Income Tax Act, 1961 as income during the year. Accordingly, the requirement to report on clause 3(viii) of the Order is not applicable to the Company.

(ix)(a) The Company has not defaulted in repayment of loans or other borrowings or in the payment of interest thereon to any lender.

(ix)(b) As represented to us by the management, the Company has not been declared wilful defaulter by any bank or financial institution or government or any government authority.

(ix)(c) Term loans were applied for the purpose for which the loans were obtained.

(ix)(d) On an overall examination of the financial statements of the Company, no funds raised on short-term basis have been used for long-term purposes by the Company.

(ix)(e) and (f) The Company does not have any subsidiary, associate or joint venture. Accordingly, the requirement to report on clause 3(ix)(e) and (f) of the Order is not applicable to the Company.

(x)(a) The Company has not raised any money during the year by way of initial public offer / further public offer (including debt instruments) hence, the requirement to report on clause 3(x)(a) of the Order is not applicable to the Company.

(x)(b) The Company has not made any preferential allotment or private placement of shares /fully or partially or optionally convertible debentures during the year under audit and hence, the requirement to report on clause 3(x)(b) of the Order is not applicable to the Company.

(xi)(a) As represented to us by the management, no fraud/ material fraud by the Company or no fraud / material fraud on the Company has been noticed or reported during the year.

(xi)(b) During the year, no report under sub-section (12) of section 143 of the Companies Act, 2013 has been filed by cost auditor/ secretarial auditor or by us in Form ADT – 4 as prescribed under Rule 13 of Companies (Audit and Auditors) Rules, 2014 with the Central Government.

(xi)(c) We have taken into consideration the whistle blower complaints received by the Company during the year while determining the nature, timing and extent of audit procedures.

(xii) The Company is not a nidhi Company as per the provisions of the Companies Act, 2013. Therefore, the requirement to report on clauses 3(xii)(a), (b) and (c) of the Order is not applicable to the Company.

(xiii) Transactions with the related parties are in compliance with sections 177 and 188 of Companies Act, 2013 where applicable and the details have been disclosed in the notes to the financial statements, as required by the applicable accounting standards.

(xiv)(a) The Company has an internal audit system commensurate with the size and nature of its business.

(xiv)(b) The internal audit reports of the Company issued till the date of the audit report, for the period under audit have been considered by us.

(xv) The Company has not entered into any non-cash transactions with its directors or persons connected with its directors and hence requirement to report on clause 3(xv) of the Order is not applicable to the Company.

(xvi)(a) The provisions of section 45-IA of the Reserve Bank of India Act, 1934 (2 of 1934) are not applicable to the Company. Accordingly, the requirement to report on clause (xvi)(a) of the Order is not applicable to the Company.

(xvi)(b) The Company has not conducted any Non-Banking Financial or Housing Finance activities without obtained a valid Certificate of Registration (CoR) from the Reserve Bank of India as per the Reserve Bank of India Act, 1934.

(xvi)(c) The Company is not a Core Investment Company as defined in the regulations made by Reserve Bank of India. Accordingly, the requirement to report on clause 3(xvi) of the Order is not applicable to the Company.

(xvi)(d) As represented to us by the management, the Group has 6 Core Investment Companies as a part of the Group.

(xvii) The Company has not incurred cash losses in the current financial year and in the immediately preceding financial year.

(xviii) There has been no resignation of the statutory auditors during the year and accordingly requirement to report on Clause 3(xviii) of the Order is not applicable to the Company.

(xix) On the basis of the financial ratios disclosed in note 38 to the financial statements, ageing and expected dates of realization of financial assets and payment of financial liabilities, other information accompanying the financial statements, our knowledge of the Board of Directors and management plans and based on our examination of the evidence supporting the assumptions, nothing has come to our attention, which causes us to believe that any material uncertainty exists as on the date of the audit report that Company is not capable of meeting its liabilities existing at the date of balance sheet as and when they fall due within a period of one year from the balance sheet date. We, however, state that this is not an assurance as to the future viability of the Company. We further state that our reporting is based on the facts up to the date of the audit report and we neither give any guarantee nor any assurance that all liabilities falling due within a period of one year from the balance sheet date, will get discharged by the Company as and when they fall due.

(xx)(a) In respect of other than ongoing projects, there are no unspent amounts that are required to be transferred to a fund specified in Schedule VII of the Companies Act (the Act), in compliance with second proviso to sub section 5 of section 135 of the Act. This matter has been disclosed in note 32 to the financial statements.

(xx)(b) The Company has not transferred the amount remaining unspent in respect of ongoing projects, to a Special Account, till the date of the report. However, the period for such transfer i.e., thirty days from the end of the financial year as permitted under sub section (6) of section 135 of the Companies Act, has not elapsed till the date of our report.

ANNEXURE 2 TO THE INDEPENDENT AUDITOR'S REPORT OF EVEN DATE ON THE FINANCIAL STATEMENTS OF MAITHON POWER LIMTED

Report on the Internal Financial Controls under Clause (i) of Sub-section 3 of Section 143 of the Companies Act, 2013 ("the Act")

We have audited the internal financial controls with reference to financial statements of Maithon Power Limited ("the Company") as of March 31, 2022 in conjunction with our audit of the financial statements of the Company for the year ended on that date.

Management's Responsibility for Internal Financial Controls

The Company's Management is responsible for establishing and maintaining internal financial controls based on the internal control over financial reporting criteria established by the Company considering the essential components of internal control stated in the Guidance Note on Audit of Internal Financial Controls Over Financial Reporting issued by the Institute of Chartered Accountants of India ("ICAI"). These responsibilities include the design, implementation and maintenance of adequate internal financial controls that were operating effectively for ensuring the orderly and efficient conduct of its business, including adherence to the Company's policies, the safeguarding of its assets, the prevention and detection of frauds and errors, the accuracy and completeness of the accounting records, and the timely preparation of reliable financial information, as required under the Companies Act, 2013.

Auditor's Responsibility

Our responsibility is to express an opinion on the Company's internal financial controls with reference to these financial statements based on our audit. We conducted our audit in accordance with the Guidance Note on Audit of Internal Financial Controls Over Financial Reporting (the "Guidance Note") and the Standards on Auditing, as specified under section 143(10) of the Act, to the extent applicable to an audit of internal financial controls, both issued by ICAI. Those Standards and the Guidance Note require that we comply with ethical requirements and plan and perform the audit to obtain reasonable assurance about whether adequate internal financial controls with reference to these financial statements was established and maintained and if such controls operated effectively in all material respects.

Our audit involves performing procedures to obtain audit evidence about the adequacy of the internal financial controls with reference to these financial statements and their operating effectiveness. Our audit of internal financial controls with reference to financial statements included obtaining an understanding of internal financial controls with reference to these financial statements, assessing the risk that a material weakness exists, and testing and evaluating the design and operating effectiveness of internal control based on the assessed risk. The procedures selected depend on the auditor's judgement, including the assessment of the risks of material misstatement of the financial statements, whether due to fraud or error.

We believe that the audit evidence we have obtained is sufficient and appropriate to provide a basis for our audit opinion on the Company's internal financial controls with reference to these financial statements.

Meaning of Internal Financial Controls With Reference to these Financial Statements

A company's internal financial controls with reference to financial statements is a process designed to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles.

S.R. Batliboi & Co. LLP Kolkata

A company's internal financial controls with reference to financial statements includes those policies and procedures that (1) pertain to the maintenance of records that, in reasonable detail, accurately and fairly reflect the transactions and dispositions of the assets of the company; (2) provide reasonable assurance that transactions are recorded as necessary to permit preparation of financial statements in accordance with generally accepted accounting principles, and that receipts and expenditures of the company are being made only in accordance with authorisations of management and directors of the company; and (3) provide reasonable assurance regarding prevention or timely detection of unauthorised acquisition, use, or disposition of the company's assets that could have a material effect on the financial statements.

Inherent Limitations of Internal Financial Controls With Reference to Financial Statements

Because of the inherent limitations of internal financial controls with reference to financial statements, including the possibility of collusion or improper management override of controls, material misstatements due to error or fraud may occur and not be detected. Also, projections of any evaluation of the internal financial controls with reference to financial statements to future periods are subject to the risk that the internal financial control with reference to financial statements may become inadequate because of changes in conditions, or that the degree of compliance with the policies or procedures may deteriorate.

Opinion

In our opinion, the Company has, in all material respects, adequate internal financial controls with reference to financial statements and such internal financial controls with reference to financial statements were operating effectively as at March 31, 2022, based on the internal control over financial reporting criteria established by the Company considering the essential components of internal control stated in the Guidance Note issued by the ICAI.

1. Corporate Information

MAITHON POWER LIMITED ('the Company'), has been set up pursuant to an agreement entered into between The Tata Power Company Limited (TPCL) and Damodar Valley Corporation (DVC) with 74% and 26% shareholding respectively, to operate and maintain Electric power generating stations. The Company has set up a thermal power generation plant (comprising of two units of 525 MW each namely 'Unit I and Unit II') at Maithon, Jharkhand with a total capacity of 1050 MW. Unit I and Unit II of the project were commissioned on 1 September, 2011 and 24 July, 2012 respectively. The registered office of the Company is Corporate Center, 34 Sant Tukaram Road, Carnac Bunder, Mumbai 400009, Maharashtra, India.

The financial statements have been approved for issue in accordance with a resolution of the directors on 19th April, 2022.

2. Significant Accounting Policies

2.1 Basis of preparation and presentation

The financial statements of the Company have been prepared in accordance with Indian Accounting Standards (Ind AS) notified under the Companies (Indian Accounting Standards) Rules, 2015 (as amended from time to time) and presentation requirements of Division II of Schedule III to the Companies Act, 2013, (Ind AS compliant Schedule III).

The financial statements have been prepared on a historical cost basis except for certain financial assets and liabilities measured at fair value (refer accounting policy regarding financial instruments).

Accounting Policy are consistent with earlier years unless stated otherwise.

3. Summary of Significant Accounting Policies

3.1 Foreign Currencies

The functional currency of the Company is Indian rupee (₹)

Income and expenses in foreign currencies are recorded at exchange rates prevailing on the date of the transaction. Foreign currency denominated monetary assets and liabilities are translated at the exchange rate prevailing on the balance sheet date and exchange gains and losses arising on settlement and restatement are recognized in the statement of profit and loss.

Non-monetary items that are measured in terms of historical cost in a foreign currency are translated using the exchange rates at the dates of the initial transactions. Non-monetary items measured at fair value in a foreign currency are translated using the exchange rates at the date when the fair value is determined. The gain or loss arising on translation of non-monetary items measured at fair value is treated in line with the recognition of the gain or loss on the change in fair value of the item (i.e., translation differences on items whose fair value gain or loss is recognised in OCI or profit or loss are also recognised in OCI or profit or loss, respectively).

Exchange differences on monetary items are recognized in profit or loss in the period in which they arise except for exchange differences on foreign currency borrowings relating to assets under construction for future productive use, which are included in the cost of those assets when they are regarded as an adjustment to interest costs on those foreign currency borrowings.

3.2 Current Vs Non Current

The Company presents assets and liabilities in the balance sheet based on current/ non-current classification. An asset is treated as current when it is:

- Expected to be realised or intended to be sold or consumed in normal operating cycle
- Held primarily for the purpose of trading
- Expected to be realised within twelve months after the reporting period, or
- Cash or cash equivalent unless restricted from being exchanged or used to settle a liability for at least twelve months after the reporting period

All other assets are classified as non-current.

A liability is current when:

- It is expected to be settled in normal operating cycle
- It is held primarily for the purpose of trading
- It is due to be settled within twelve months after the reporting period, or
- There is no unconditional right to defer the settlement of the liability for at least twelve months after the reporting period

All other liabilities are classified as non-current.

Deferred tax assets and liabilities are classified as non-current assets and liabilities.

The operating cycle is the time between the acquisition of assets for processing and their realisation in cash and cash equivalents. The Company has identified twelve months as its operating cycle.

3.3 Financial Instruments

A financial instrument is any contract that gives rise to a financial asset of one entity and a financial liability or equity instrument of another entity.

Financial assets and financial liabilities are recognized when the Company becomes a party to the contractual provisions of the instruments.

Financial assets and financial liabilities are initially measured at fair value. Transaction costs that are directly attributable to the acquisition or issue of financial assets and financial liabilities (other than financial assets and financial liabilities at fair value through profit or loss) added to or deducted from the fair value of the financial assets or financial liabilities, as appropriate, on initial recognition. Transaction costs directly attributable to the acquisition of financial assets or financial liabilities at fair value through profit or loss are recognized immediately in statement of profit and loss.

S R Batliboi & Co. LLP Kolkata

MAITHON POWER LIMITED

3.4 Financial Assets

All regular way purchases or sales of financial assets are recognized and derecognized on a trade date basis. Regular way purchases or sales are purchases or sales of financial assets that require delivery of assets within the time frame established by regulation or convention in the marketplace. Financial assets are classified, at initial recognition, as subsequently measured at amortised cost, fair value through other comprehensive income (OCI), or fair value through profit or loss. The classification of financial assets at initial recognition depends on the financial asset's contractual cash flow characteristics and the Company's business model for managing them.

3.4.1 Financial assets at amortised cost

A 'financial asset' is measured at the amortised cost if both the following conditions are met:
a) The asset is held within a business model whose objective is to hold assets for collecting contractual cash flows, and
b) Contractual terms of the asset give rise on specified dates to cash flows that are solely payments of principal and interest (SPPI) on the principal amount outstanding.

After initial measurement, such financial assets are subsequently measured at amortised cost using the effective interest rate (EIR) method. The EIR amortisation is included in finance income in the profit or loss.

3.4.2 Financial assets at fair value through other comprehensive income(FVTOCI)

A 'financial asset' is classified as at the FVTOCI if both of the following criteria are met:
a) The objective of the business model is achieved both by collecting contractual cash flows and selling the financial assets, and
b) The asset's contractual cash flows represent SPPI.

On initial recognition, the Company makes an irrevocable election on an instrument-by-instrument basis to present the subsequent changes in fair value in other comprehensive income pertaining to investments in equity instruments, other than equity instruments which are held for trading. Subsequently, they are measured at fair value with gains and losses arising from changes in fair value recognised in other comprehensive income and accumulated in the 'Reserve for equity instruments through other comprehensive income'. The cumulative gain or loss is not reclassified to profit or loss on sale of the investments.

3.4.3 Financial assets at fair value through profit or loss (FVTPL)

Investments in equity instruments are classified as at FVTPL, unless the Company irrevocably elects on initial recognition to present subsequent changes in fair value in other comprehensive income for investments in equity instruments which are not held for trading.
Other financial assets are measured at fair value through profit or loss unless it is measured at amortised cost or at fair value through other comprehensive income on initial recognition. The transaction costs directly attributable to the acquisition of financial assets and liabilities at fair value through profit or loss are immediately recognized in statement of profit or loss.

3.4.4 Derecognition of Financial Assets

A financial asset (or, where applicable, a part of a financial asset or part of a group of similar financial assets) is primarily derecognised (i.e. removed from the Company's balance sheet) when:

i) the right to receive cash flows from the asset have expired, or
ii) the Company has transferred its right to receive cash flows from the asset or has assumed an obligation to pay the received cash flows in full without material delay to a third party under a 'pass-through' arrangement; and either (a) the Company has transferred substantially all the risks and rewards of the asset, or (b) the Company has neither transferred nor retained substantially all the risks and rewards of the asset, but has transferred control of the asset.

When the Company has transferred its right to receive cash flows from an asset or has entered into a pass-through arrangement, it evaluates if and to what extent it has retained the risks and rewards of ownership. When it has neither transferred nor retained substantially all of the risks and rewards of the asset, nor transferred control of the asset, the Company continues to recognise the transferred asset to the extent of the Company's continuing involvement. In that case, the Company also recognises an associated liability. The transferred asset and the associated liability are measured on a basis that reflects the rights and obligations that the Company has retained.

3.4.5 Impairment of financial assets

The Company assesses at each date of balance sheet whether a financial asset or a group of financial assets is impaired. Ind AS 109 requires expected credit losses to be measured through a loss allowance. The Company recognises lifetime expected losses for all contract assets and / or all trade receivables that do not constitute a financing transaction. For all other financial assets, expected credit losses are measured at an amount equal to the 12 month expected credit losses or at an amount equal to the life time expected credit losses if the credit risk on the financial asset has increased significantly since initial recognition.

S R Batliboi & Co. LLP Kolkata

MAITHON POWER LIMITED

3.5 Financial Liabilities

All financial liabilities are recognised initially at fair value and in case of loans and borrowings and payables, net of directly attributable transaction cost.

For purposes of subsequent measurement, financial liabilities are classified in two categories:

a) Financial liabilities at fair value through profit or loss
b) Financial liabilities at amortised cost (loans and borrowings)

3.5.1 Financial liabilities at fair value through profit or loss

Financial liabilities at fair value through profit or loss include financial liabilities held for trading and financial liabilities designated upon initial recognition as at fair value through profit or loss. Gains or losses on liabilities held for trading are recognised in the profit or loss. The Company has not designated any financial liability as at fair value through profit or loss.

3.5.2 Financial liabilities at amortised cost (Loans and borrowings)

After initial recognition, interest-bearing loans and borrowings are subsequently measured at amortised cost using the EIR method. Gains and losses are recognised in profit or loss when the liabilities are derecognised as well as through the EIR amortisation process. The EIR amortisation is included as finance costs in the statement of profit and loss.

3.5.3 Derecognition of Financial Liabilities

A Financial liability is derecognised when the obligation under the liability is discharged or cancelled or expires. When an existing financial liability is replaced by another from the same lender on substantially different terms, or the terms of an existing liability are substantially modified , such an exchange or modification is treated as the derecognition of the original liability and the recognition of a new liability . The difference in the respective carrying amounts is recognised in the statement of profit and loss.

3.6 Offsetting of financial instruments

Financial assets and financial liabilities are offset and the net amount is reported in the balance sheet if there is a currently enforceable legal right to offset the recognised amounts and there is an intention to settle on a net basis, to realise the assets and settle the liabilities simultaneously.

3.7 Dividend Distribution to equity shareholders of the Company

The Company recognises a liability to make dividend distributions to its equity holders when the distribution is authorised and the distribution is no longer at the discretion of the Company . As per the corporate laws in India, a distribution is authorised when it is approved by the shareholders. A corresponding amount is recognised directly in equity.

In case of Interim Dividend, the liability is recognised on its declaration by the Board of Directors.

4. Critical accounting estimates and judgements

In the application of the Company's accounting policies, the management of the Company is required to make judgements, estimates and assumptions about the carrying amounts of assets and liabilities that are not readily apparent from other sources. The estimates and associated assumptions are based on historical experience and other factors that are considered to be relevant. Actual results may differ from these estimates.

The estimates and underlying assumptions are reviewed on an ongoing basis. Revisions to accounting estimates are recognized in the period in which the estimate is revised if the revision affects only that period, or in the period of the revision and future periods if the revision affects both current and future periods. Detailed information about each of these estimates and judgements is included in relevant notes together with information about the basis of calculation for each affected line item in the financial statements.

The areas involving critical estimates or judgements are:

a) Estimation of current tax and deferred tax expense (including Minimum alternate tax credit) - Note 23 and Note 33
b) Recoverable from Beneficiaries / Payable to Beneficiaries(Net) - Note 24
c) Estimation on recoverability of Late Payment Surcharge (LPS) – Note 27
d) Estimation of defined benefit obligations- Note 22
e) Judgement to estimate the amount of provision required or to determine required disclosure related to litigation and claims against the Company - Note 35.

Estimates and judgement are continually evaluated. They are based on historical experience and other factors, including expectations of future events that may have a financial impact on the Company and that are believed to be reasonable under the circumstances.

S R Batliboi & Co. LLP Kolkata

MAITHON POWER LIMITED

5. Property, Plant and Equipment

5.1 Accounting Policy

Property, plant and equipment (PPE) is stated at cost less accumulated depreciation and accumulated impairment losses, if any. Cost includes purchase price (net of trade discount and rebates) and any directly attributable cost of bringing the asset to its working condition for its intended use and for qualifying assets, borrowing costs capitalised in accordance with Ind AS 23. Capital work in progress is stated at cost, net of accumulated impairment loss, if any. Other Indirect Expenses incurred relating to project, net of income earned during the project development stage prior to its intended use, are considered as pre-operative expenses and disclosed under Capital Work-in-Progress. When significant parts of plant and equipment are required to be replaced at intervals, the Company depreciates them separately based on their specific useful lives. Likewise, when a major inspection is performed, its cost is recognised in the carrying amount of the plant and equipment as a replacement if the recognition criteria are satisfied. All other repair and maintenance costs are recognised in the statement of profit and loss as incurred.

5.2 Subsequent Cost

Subsequent costs are included in the asset's carrying amount or recognised as a separate asset, as appropriate, only when it is probable that future economic benefits associated with the item will flow to the entity and the cost can be measured reliably. All other repair and maintenance costs are recognized in profit or loss as incurred.

5.3 Depreciation

Depreciation commences when the assets are ready for the intended use.

Depreciation on property, plant and equipment in respect of electricity business of the Company is covered under Part B of Schedule II of the Companies Act, 2013, has been provided on the straight line method at the rates using the methodology required by relevant provisions of Central Electricity Regulatory Commission.

Depreciation on all other assets is recognised on the cost of assets (other than freehold land) less their residual values over their estimated useful lives, using the straight-line method.

5.4 Useful lives of tangible assets:

The estimated useful lives, residual values and depreciation method are reviewed at the end of each reporting period, with the effect of any changes in estimate accounted for on a prospective basis. The Company, based on technical assessment made by technical expert and management estimate, depreciates certain items of building, plant and equipments over estimated useful lives which are different from the useful life prescribed in Schedule II to the Companies Act, 2013. The management believes that these estimated useful lives are realistic and reflect fair approximation of the period over which the assets are likely to be used.

Type of Asset	Useful Lives
Buildings-Plant	25 Years
Buildings-Others	25 Years
Plant and Equipment	25 Years
Computer	3 Years
Furniture and Fixtures	5 to 10 years
Office Equipment	5 to 10 years
Motor vehicles etc	5 Years
Railway Sidings & Overhead Electrification	25 Years

5.5 Derecognition of tangible assets

An item of Property, plant and equipment is derecognised upon disposal or when no future economic benefits are expected to arise from the continued use of the asset. Any gain or loss arising on the disposal or retirement of an item of property, plant and equipments is determined as the difference between the sales proceeds and the carrying amount of the asset and is recognised in the statement of profit and loss.

5.6 Impairment of tangible and intangible assets

The Company assesses, at each reporting date, whether there is an indication that an asset may be impaired. If any indication exists, or when annual impairment testing for an asset is required, the Company estimates the asset's recoverable amount. An asset's recoverable amount is the higher of an asset's or cash-generating unit's (CGU) fair value less costs of disposal and its value in use. Recoverable amount is determined for an individual asset, unless the asset does not generate cash inflows that are largely independent of those from other assets of or Group of assets.

When the carrying amount of an asset or CGU exceeds its recoverable amount, the asset is considered impaired and is written down to its recoverable amount.

Impairment losses of tangible and intangible assets are recognised in the statement of profit and loss.

(a) The Land was acquired by Damodar Valley Corporation (DVC) exclusively for the Maithon Right Bank Thermal Power Project. As per the Shareholders Agreement, the title is to be transferred to the Company. Pending transfer of title as stated above, the Company had entered into an Indenture Deed with DVC on 5 December, 2008, which provided inter-alia, lease of private land for a period of 35 years (and extendable for another 35 years at the option of the Company) and provision to create security in favour of Lenders and transfer this land to the Company at the cost at which it was acquired subject to approval of the Government of the State of Jharkhand. The process of Mutation in name of DVC is yet to complete, thereafter it will be transferred in the name of the company.

(b) The Land was acquired by Damodar Valley Corporation (DVC) exclusively for the Maithon Right Bank Thermal Power Project. As per the shareholders agreement, the title of these lands is to be transferred to the Company. DVC is in the process of transferring title of these lands in favour of the Company as per applicable laws of the State of Jharkhand. The process of Mutation in name of DVC is yet to complete, thereafter it will be transferred in the name of the company.

(c) The Company has received demand for 191.67 acres of Jungle Jhar (Forest Land) from Government of Jharkhand and has made payment of requisite amount and is waiting for Draft Lease agreement to execution of lease from Government of Jharkhand in the name of Company.

(d) The Land was acquired by Damodar Valley Corporation (DVC) exclusively for the Maithon Right Bank Thermal Power Project. As per the shareholders agreement, the lease of these lands is to be transferred to the Company. DVC is in the process of transferring lease of these lands in favour of the Company as per applicable laws of the State of Jharkhand. The Company is yet to received demand from Government of Jharkhand for execution of lease in the name of Company.

(e) The expenditure in connection with private land including land compensation and rehabilitation and resettlement expenses has been capitalised as freehold land and the expenditure in connection with GM land and Forest land has been included in Right of Use Assets.

(f) Freehold land with a carrying amount of ₹299.91 crores (as at 31st March, 2021 ₹299.91 crores) has been mortgaged to secure borrowings of the Company (Refer Note 19 & 25).

Capital Work in Progress	Amount in CWIP for a period of				Total
	Less than 1 year	1-2 years	2-3 years	More than 3 years	
Projects in progress	125.72	61.75	2.61	-	190.08

CWIP* ageing Schedule as at 31st March 2021

₹ crore

Capital Work in Progress	Amount in CWIP for a period of				Total
	Less than 1 year	1-2 years	2-3 years	More than 3 years	
Projects in progress	74.57	2.65	-	0.37	77.59

*Excluding Capital Stock. .

Note:- There is no project whose completion is overdue or its cost has exceeded the original plan as at 31st March, 2022 as well as 31st March, 2021.

7. Other Intangible Assets

7.1 Accounting Policy

Intangible assets acquired separately
Intangible assets acquired separately are measured on initial recognition at cost. Following initial recognition, intangible assets are carried at cost less any accumulated amortisation and accumulated impairment losses, if any.

7.2 Subsequent Cost

Subsequent costs are included in the asset's carrying amount or recognised as a separate asset, as appropriate, only when it is probable that future economic benefits associated with the item will flow to the entity and the cost can be measured reliably.

7.3 Derecognition of intangible assets

An intangible asset is derecognized on disposal, or when no future economic benefits are expected from use or disposal. Gains or losses arising from derecognition of an intangible asset is measured as the difference between the net disposal proceeds and the carrying amount of the asset, are recognized in profit or loss when the asset is derecognized.

7.4 Amortisation of intangible assets

Intangible assets with finite lives are amortised over the useful economic life on straight line basis and assessed for impairment whenever there is an indication that the intangible asset may be impaired. The amortisation period and the amortisation method for an intangible asset with a finite useful life is reviewed at least at the end of each reporting period. Changes in the expected useful life or the expected pattern of consumption of future economic benefits embodied in the asset are considered to modify the amortisation period or method, as appropriate, and are treated as changes in accounting estimates. The amortisation expense on intangible assets with finite lives is recognised in the statement of profit and loss unless such expenditure forms part of carrying value of another asset.

Estimated useful lives of the intangible assets are as follows:

Type of Asset	Useful Lives

8. Right - of - use - assets

The Company recognizes right-of-use assets at the commencement date of the lease (i.e., the date the underlying asset is available for use). Right-of-use assets are measured at cost, less any accumulated depreciation and impairment losses, and adjusted for any remeasurement of lease liabilities. The cost of right-of-use assets includes the amount of lease liabilities recognized, initial direct costs incurred, lease payments made at or before the commencement date less any lease incentives received and estimate of costs to dismantle. Right-of-use assets are depreciated on a straight-line basis over the shorter of the lease term and the estimated useful lives of the assets, as follows:

- Land: 05 to 35 years

The right-of-use assets are also subject to impairment in accordance with Ind AS 36 "Impairment of assets". The Company presents right-of-use assets that do not meet the definition of investment property in 'Property, plant and equipment'.

13. Inventories

Inventories are stated at the lower of cost and net realisable value. Cost of inventory includes cost of purchase and other costs incurred in bringing the inventories to their present location and condition. Costs of inventories are determined on weighted average basis. Finished goods and work in progress: cost includes cost of direct materials and labour and a proportion of manufacturing overheads based on the normal operating capacity, but excluding borrowing costs. Net realisable value represents the estimated selling price for inventories less all estimated costs of completion and costs necessary to make the sale. Unserviceable/damaged stores and spares are identified and written down based on technical evaluation.

15. Trade Receivables

Current Trade Receivables

Secured, Considered good	60.03	27.49
	60.03	**27.49**

The average credit period for the Company's receivable from its sale of power is 60 days. As per the relevant provisions of the CERC Regulations, penal interest @ 18% p.a. is claimable from the customers as Late payment Surcharge (LPS).

As stated in Note 27 to financial statements Late Payment Surcharge (LPS) are recognised on actual realisation or accrued based on an assessment of certainty of realization supported by either an acknowledgement from customers or on receipt of favourable order from regulator / authorities.

No Trade or Other receivable are due from directors or other officers of the company either severally or jointly with any other person. No Trade or Other receivable are due from firms or private companies respectively in which any director is a partner, a director or a member.

Trade Receivables Ageing schedule:

There is no outstanding balance of Trade Receivable which are due for payment as on 31st March, 2022 and as on 31st March, 2021, therefore ageing schedule has not been disclosed. Further the outstanding balance of trade receivables are undisputed as on year end.

16. Cash and cash equivalents

Accounting Policy

Cash and cash equivalents in the Balance Sheet comprise cash at banks and on hand and short-term deposits with an original maturity of three months or less, which are subject to an insignificant risk of changes in value. Cash and cash equivalents include balances with banks which are unrestricted for withdrawal and usage.

For the purpose of the statement of cash flows, cash and cash equivalents consist of cash at bank, cash/cheques on hand and short-term deposits, as defined above as they are considered an integral part of the Company's cash management.

Nature and purpose of reserves:

Debenture Redemption Reserve
The Company was required to create a Debenture Redemption Reserve out of the profits which are available for payment of dividend for the purpose of redemption of debentures. Pursuant to Companies (Share Capital and Debentures) Amendment Rules, 2019 dated 16th August, 2019, the Company is not required to create Debenture Redemption Reserve (DRR). Accordingly, the Company has not created DRR during the year and DRR created till previous years will be transferred to retained earnings on redemption of debentures.

Retained Earnings
Retained Earnings are the profits of the Company earned till date net of appropriations.

I. Redeemable Non-Convertible Debentures issued on 30th November 2015

(a) The Company has issued ₹ 500.00 crores of secured, non-cumulative and non-convertible redeemable debentures of face value ₹10.00 lakhs each on 30 November, 2015 at par. The debentures have been issued for the part-refinancing of the outstanding term loan from banks and financial institution. The debentures are listed in the wholesale debts market segment of National Stock Exchange of India Limited (NSE).

(b) These debentures have been secured in favour of the debenture trustee by a first ranking pari passu mortgage (by way of an equitable or any other mortgage) and charge over all the immovable properties including the freehold land of the plant and railway (included under property, plant and equipment as freehold land) of the issuer, both present and future.

(c) These debentures carry a floating rate which is base rate of HDFC Bank Limited plus 15 basis points. Interest is payable on the 30th of November each year.

II. Redeemable Non-Convertible Debentures issued on 9th February 2017

(a) The Company has issued ₹ 500.00 crores of secured, non-cumulative and non-convertible redeemable debentures of face value ₹50.00 Lakhs on 9 February, 2017 at par respectively. The debentures have been issued for the part-refinancing of the outstanding term loan from banks and financial institution. The debentures are listed in the wholesale debts market segment of National Stock Exchange of India Limited (NSE).

(b) These debentures have been secured by a first ranking pari passu mortgage (by way of an equitable or any other mortgage) and charge over all the immovable properties including the freehold land of the plant and railway (included under property, plant and equipment as freehold land), all movable properties and assets, all the bank accounts, all current assets, all intangible assets, both present and future.
Assignment by way of security over letter of credit, performance bonds or guarantees provided by any person, all the rights, title, interest, benefits, claims and demands, whatsoever of the Issuer in each of the Project Documents, all Insurance Contracts/proceeds under Insurance Contracts, in relation to the Project of the issuer .
The above security will at all times, rank pari-passu inter se the Existing Lenders and the Debenture holders.

(c) These debentures carry a fixed rate of interest of 8% per annum. Interest is payable on the 9th of February each year.
The Company will have to take a prior written no-objection certificate from the debenture holders in the event it intends to create a security over the above secured properties in favour of its working capital lenders over and above ₹ 1000.00 crores.

III. Redeemable Non-Convertible Debentures issued on 24th December 2020

(a) The Company has issued ₹ 199.00 crores of secured, non-cumulative and non-convertible redeemable debentures of face value ₹10.00 Lakhs each on 24th December, 2020 at par respectively. The debentures have been issued for the part-repayment of the existing term loan availed from SBI. The debentures are listed in the wholesale debts market segment of National Stock Exchange of India Limited (NSE).

(b) These Debentures have been secured by Security as mentioned in above para II-(b).

(c) These debentures carry a fixed coupon rate of 6.25% per annum. Interest is payable on 24th December each year.

IV. Term Loan from Axis Bank & Union Bank of India

(a) The Company has entered into a Loan Agreement of ₹ 500 Crore for Railway Infra with Axis Bank on 28th January, 2020. Axis bank has down sell borrowings of ₹ 150 Crs to Union Bank of India with same terms & condition on 6th January 2021.

(b) These loan have been secured by Security as mentioned in above para II-(b).

(c) Interest rate term loan is Axis bank 12 Month MCLR plus 25 basis points.

V. Term Loans from Axis Bank (Refinancing)

(a) The Company has entered into a Loan Agreement of ₹ 225 Crore with Axis Bank on 29th December, 2020 for the part-refinancing of the outstanding term loan from SBI.

(b) These loan have been secured by Security as mentioned in above para II-(b).

(c) Interest rate term loan is Axis Bank 12 month MCLR plus 5 basis points.

VI. Non Current borrowings secured against current assets

The quarterly returns or statements of current assets filed by the company with banks or financial institutions are in agreement with the books of accounts and there are no discrepancies.

MAITHON POWER LIMITED

20. Lease Liabilities

Accounting Policy

At inception of contract, the Company assesses whether the contract is, or contains, a lease. A contract is, or contains, a lease if the contract conveys the right to control the use of an identified asset for a period of time in exchange for consideration. At inception or on reassessment of a contract that contains a lease component, the Company allocates consideration in the contract to each lease component on the basis of their relative standalone

As a lessee

i) Lease liabilities

At the commencement date of the lease, the Company recognises lease liabilities measured at the present value of lease payments to be made over the lease term. In calculating the present value of lease payments, the Company generally uses its incremental borrowing rate at the lease commencement date if the discount rate implicit in the lease is not readily determinable.

After the commencement date , the amount of lease liabilities is increased to reflect the accretion of interest and reduced for the lease payments made. The carrying amount is remeasured when there is a change in future lease payments arising from a change in index or rate. In addition, the carrying amount of lease liabilities is remeasured if there is a modification, a change in the lease term, a change in the lease payments or a change in the assessment of an option to purchase the underlying asset. The Company's lease liabilities are included in Interest-bearing loans and borrowings.

ii) Short term leases and leases of low value of assets

The Company applies the short-term lease recognition exemption to its short-term leases (i.e., those leases that have a lease term of 12 months or less from the commencement date and do not contain a purchase option). It also applies the lease of low-value assets recognition exemption that are considered to be low value. Lease payments on short-term leases and leases of low value assets are recognised as expense on a straight-line basis over the lease term.

Leasing arrangement as Lessee

The Company has lease contracts for various items of plant, machinery, land, vehicles and other equipment used in its operations. Leases of land generally have lease terms between 05 and 35 years. Expenses related to leases of low value asset has been charged to statement of profit and loss account as lease rent amounting ₹0.59 crores during the current year (31st March 2021 - ₹0.66 crores).

22. Provisions

Accounting Policy

Provisions are recognized when the Company has a present obligation (legal or constructive) as a result of a past event, it is probable that the Company will be required to settle the obligation, and a reliable estimate can be made of the amount of the obligation.

The amount recognized as a provision is the best estimate of the consideration required to settle the present obligation at the end of the reporting period, taking into account the risks and uncertainties surrounding the obligation. When a provision is measured using the cash flows estimated to settle the present obligation, its carrying amount is the present value of those cash flows (when the effect of time value of money is material).
Present obligations arising under onerous contracts are recognised and measured as provisions with charge to statement of profit and loss. An onerous contract is considered to exist where the Company has a contract under which the unavoidable costs of meeting the obligations under the contract exceed the economic benefits expected to be received from the contract.

Defined contribution plans
Payments to defined contribution retirement benefit plans are recognised as an expense when employees have rendered service entitling them to the contributions.

Defined benefits plans
The cost of providing benefits under the defined benefit plan is determined using the projected unit credit method. Remeasurements, comprising of actuarial gains and losses, the effect of the asset ceiling, excluding amounts included in net interest on the net defined benefit liabilities and the return on plan assets (excluding amounts included in net interest on the net defined benefit liability), are recognised immediately in the balance sheet with a corresponding debit or credit to retained earnings through other comprehensive income in the period in which they occur. Remeasurements are not reclassified to profit or loss in subsequent periods. Past service costs are recognised in the statement of profit and loss on the earlier of:

- The date of the plan amendment or curtailment, and
- The date that the Company recognises related restructuring costs

Net interest is calculated by applying the discount rate to the net defined benefit liabilities or asset. The Company recognises the following changes in the net defined benefit obligation as an expense in the statement of profit and loss:

- Service costs comprising current service costs, past-service costs, gains and losses on curtailments and non routine settlements; and
- Net interest expense or income.

A liability for a termination benefit is recognised at the earlier of when the entity can no longer withdraw the offer of the termination benefit and when the entity recognises any related restructuring costs.

The cost of the defined benefit gratuity plan and other post-employment medical benefits and the present value of the gratuity obligation are determined using actuarial valuations. An actuarial valuation involves making various assumptions that may differ from actual developments in the future. These include the determination of the discount rate, future salary increases and mortality rates. Due to the complexities involved in the valuation and its long-term nature, a defined benefit obligation is highly sensitive to changes in these assumptions. All assumptions are reviewed at each reporting date.

The parameter most subject to change is the discount rate. In determining the appropriate discount rate for plans operated in India, the management considers the interest rates of government bonds. The mortality rate is based on publicly available mortality tables. Those mortality tables tend to change only at interval in response to demographic changes. Future salary increases and gratuity increases are based on expected future inflation rates.

Current and other non-current employee benefits

A liability is recognised for benefits accruing to employees in respect of wages and salaries, annual leave and sick leave in the period the related service is rendered at the undiscounted amount of the benefits expected to be paid in exchange for that service.

Liabilities recognised in respect of current employee benefits are measured at the undiscounted amount of the benefits expected to be paid in exchange for the related service.

Liabilities recognised in respect of other non-current employee benefits are measured at the present value of the estimated future cash outflows expected to be made by the Company in respect of services provided by employees up to the reporting date.

Employee Benefit Plans

22.1 Defined Contribution plan

The Company makes Provident Fund and Superannuation Fund contributions to defined contribution retirement benefit plans for eligible employees. The provident fund plan is operated by the Regional Provident Fund Commissioner. The Superannuation fund is managed by LIC of India. Under the schemes, the Company is required to contribute a specified percentage of the payroll costs to fund the benefits. The only obligation of the Company with respect to the retirement benefit scheme is to make the specified contributions.

The Company has recognized ₹ 1.28 crores (31st March, 2021 ₹ 1.37 crores) for provident fund contributions and ₹ 0.37 crores (31st March, 2021 ₹ 0.45 crores) for superannuation contributions in the Statement of Profit and Loss. The contributions payable to these plans by the Company are at rates specified in the rules of the schemes.

22.2 Defined benefit plans

(i) Unfunded

Post-Employment Medical Benefits
The Company provides certain post-employment health care benefits to superannuated employees at some of its locations. In terms of the plan, the retired employees can avail free medical check-up and medicines at Company's facilities.

Pension
The Company operates a defined benefit pension plan for employees who have completed 15 years of continuous service. The plan provides benefits to members in the form of a pre-determined lumpsum payment on retirement. Executive Director, on retirement, is entitled to pension payable for life including HRA benefit. The level of benefit is approved by the Board of Directors of the Company from time to time.

Ex-Gratia Death Benefit

The Company has a defined benefit plan granting ex-gratia in case of death during service. The benefit consists of a pre-determined lumpsum amount along with a sum determined based on the last drawn basic salary per month and the length of service.

Retirement Gift
The Company has a defined benefit plan granting a pre-determined sum as retirement gift on superannuation of an employee.

(ii) Funded

Gratuity Plan
The Company has a defined benefit gratuity plan. The gratuity plan is primarily governed by the Payment of Gratuity Act, 1972. Employees who are in continuous service for a period of five years are eligible for gratuity. The level of benefits provided depends on the member's length of service and salary at the retirement, withdrawal, resignation or death of an employee. The gratuity plan is funded plan. The gratuity fund is managed by Aditya Birla Sun Life Insurance Company Limited. The fund has the form of a trust and is governed by Trustees appointed by the Company. The Trustees are responsible for the administration of the plan assets and for the definition of the investment strategy in accordance with the regulations. The funds are deployed in recognized insurer managed funds in India. The Company does not fully fund the liability and maintains a target level of funding to be maintained over a period of time based on estimates of expected gratuity payments.

The Plan assets include investments in G-Sec Bonds and accordingly exposed to financial risk.

B.R. Batliboi & Co. LLP Kolkata

MAITHON POWER LIMITED

(iii) Risks associated with Plan Provisions

Risks associated with the plan provisions are actuarial risks. These risks are: - (i) investment risk, (ii) interest risk (discount rate risk), (iii) mortality risk and (iv) salary risk.

Investment risk	The present value of the defined benefit plan liability is calculated using a discount rate determined by reference to Government Bonds Yield. If plan liability is funded and return on plan assets is below this rate, it will create a plan deficit.
Interest rate risk (discount rate risk)	A decrease in the bond interest rate (discount rate) will increase the plan liability; however , this will be partially offset by an increase in the return on the plan debt investments.
Mortality risk	The present value of the defined benefit plan liability is calculated by reference to the best estimate of the mortality of plan participants both during and after the employment. Indian Assured Lives Mortality (2006-08) ultimate table has been used in respect of the above. An increase in the life expectancy of the plan participants such as, an increase in the salary of the plan participants will increase the plan's liability.
Salary escalation risk	The present value of the defined benefit plan liability is calculated with the assumption of salary increase rate of plan participants in future. Deviation in the rate of increase of salary in future for plan participants from the rate of increase in salary used to determine the present value of obligation will have a bearing on the plan's liability.
Demographic risk	This is the risk of variability of results due to unsystematic nature of decrements that include mortality, withdrawal, disability and retirement. The effect of these decrements on the defined benefit obligations is not straight forward and depends upon the combination of salary increase, discount rate and vesting criterion.
Medical Inflation rate risk	Higher than expected increase in salary and medical cost will increase the defined benefit obligation.
Change in Leave Balances	This is the risk of variability of results due to a significant variation from expected accumulation of leave balances. All other aspects remaining same, higher than expected increase in the leave balances will increase the defined benefit obligation.

(iv) The principal assumptions used for the purposes of the actuarial valuations were as follows:

S. No.	Particulars	Refer note below	As at 31st March, 2022	As at 31st March, 2021
i.	Discount rate (p.a)	1	6.80%	6.60%
ii.	Salary escalation rate (p.a)	2		
	Management		7.00%	7.00%
	Non-Management		6.00%	5.00%
iii.	Retirement Age		60 years	60 years
iv.	Mortality Table		Indian Assured Lives Mortality (2006-08) Ult	Indian Assured Lives Mortality (2006-08) Ult
v.	Withdrawal Rate			
	Management: 21-44 years		6.00%	6.00%
	45 years and above		2.00%	2.00%
	Non-Management		0.50%	0.50%
vi.	Rate of Gold Inflation		8.00%	8.00%
vii.	Rate of Medical inflation (p.a)		8.00%	8.00%

Note:

1. The discount rate is based on the prevailing market yields of Indian Government securities as at the balance sheet date for the estimated term of obligations

2. The gratuity plan is funded

3. The estimates of future salary increases considered take into account the inflation, seniority, promotion and other relevant factors.

22.3 The amounts recognized in the financial statements and the movements in the net defined benefit obligations (DBO) over the year are as follows:

i. Amounts recognized in the Statement of Profit and Loss in respect of the funded defined benefits plans are as follows:

Particulars	For Year ended 31st March, 2022 ₹ crores	For Year ended 31st March, 2021 ₹ crores
Current service cost	1.04	1.16
Net interest on net defined liability / (asset)	(0.14)	(0.04)
Components of defined benefit costs recognized in profit or loss	**0.90**	**1.12**

ii. Remeasurement on the net defined benefit liability:

Particulars	For Year ended 31st March, 2022 ₹ crores	For Year ended 31st March, 2021 ₹ crores
Actuarial (gain)/Loss due to DBO Experience	0.20	(0.45)
Actuarial (gain)/Loss due to assumption changes	(0.24)	(0.12)
Actuarial (gain)/loss arising during period	(0.03)	(0.57)
Return on plan assets (greater)/less than discounting rate	0.40	0.04
Component of defined benefit costs recognized in Other Comprehensive Income	**0.37**	**(0.53)**

Note:

1) The current service cost and the net interest expense for the year are included in the 'Employee benefits expense ' in the Statement of Profit and Loss.

2) The remeasurement of the net defined benefit liability is included in the other comprehensive income.

iii. The amount included in the Balance Sheet arising from the entity's obligation in respect of its defined benefits plans as follows:

Particulars	For Year ended 31st March, 2022 ₹ Crores	For Year ended 31st March, 2021 ₹ Crores
Present value of funded defined benefit obligation	(12.59)	(11.72)
Fair value of plan assets	14.17	13.66
Funded status surplus/(deficit)	**1.57**	**1.94**

iv. Movement in the fair value of the defined benefit obligation:

Particulars	For Year ended 31st March, 2022 ₹ crores	For Year ended 31st March, 2021 ₹ crores
Opening defined benefit obligation	11.72	12.42
Current service cost	1.04	1.16
Interest cost on defined benefit obligation	0.76	0.80
Acquisitions (credit) / cost	(0.42)	(1.81)
Actuarial (gains) / loss arising from changes in experience	0.20	(0.45)
Actuarial (gains) / loss arising from changes in financial assumption	(0.24)	(0.12)
Benefits paid directly by the company	(0.47)	(0.28)
Closing defined benefit obligations	**12.59**	**11.72**

S R Batliboi & Co. LLP Kolkata

MAITHON POWER LIMITED

v. Movement in the fair value of the plan assets are as follows:

Particulars	For Year ended 31st March, 2022 ₹ Crores	For Year ended 31st March, 2021 ₹ Crores
Opening fair value of plan assets	13.66	12.87
Interest income on plan assets	0.90	0.84
Return on plan assets (greater)/less than discounting rate	(0.40)	(0.04)
Closing fair value of plan assets	**14.17**	**13.66**

Note:

1) The plan assets of the Company managed through a trust are managed by Birla Sun Life Insurance (BSLI) Company Limited. The details of investments relating to these assets are not shown by BSLI. Hence, the composition of each major category of plan assets, the percentage or amount that each major category constitutes to the fair value of the total plan assets has not been disclosed.

2) The Company expects to make a contribution of ₹ Nil (as at 31 March, 2021: ₹ Nil) to defined benefit plan during the next financial year.

vi. Sensitivity analysis

Significant actuarial assumptions for the determination of the defined benefit obligation are discount rate, expected salary increase and mortality. The sensitivity analysis below have been determined based on reasonably possible changes of the assumptions occurring at the end of the reporting period, while holding all other assumptions constant.

The sensitivity of the defined benefit obligation to changes in the weighted principal assumptions is:

Particulars	31st March, 2022 ₹ Crores		31st March, 2021 ₹ Crores	
	Increase	Decrease	Increase	Decrease
Discount Rate (-/+0.5%)	(0.56)	0.60	(0.56)	0.61
Salary Growth Rate (+/-0.5%)	0.60	(0.56)	0.60	(0.56)
Withdrawal Rate (-/+ 5%)	(0.65)	-	(0.77)	-

The sensitivity analysis presented above may not be representative of the actual change in the defined benefit obligation as it is unlikely that the change in assumptions would occur in isolation of one another as some of the assumptions may be correlated.

Furthermore, in presenting the above sensitivity analysis, the present value of the defined benefit obligation has been calculated using the projected unit credit method at the end of the reporting period, which is the same as that applied in calculating the defined benefit liability recognized in the Balance sheet.

There was no change in the methods and assumptions used in preparing the sensitivity analysis from prior years.

vii. The expected maturity analysis of defined benefit obligation is as follows:

Time Period	31st March, 2022 ₹ Crores	31st March, 2021 ₹ Crores
Within 1 year	1.05	0.42
Between 1-2 years	0.58	0.48
Between 2-3 years	0.52	0.96
Between 3-4 years	1.90	1.15
Between 4-5 years	2.27	1.87
Beyond 5 years	8.28	8.05

Particulars	31st March, 2022	31st March, 2021
The weighted average duration of the defined benefit plan obligation represents average duration for active members	7.6 years	7.4 years

S R Batliboi & Co. LLP Kolkata

MAITHON POWER LIMITED

22.4 Other Defined benefit plans

The amounts recognized in the financial statements and the movements in the net defined benefit obligations over the year are as follows:

i. Amounts recognized in the Statement of Profit and Loss in respect of these defined benefits plans are as follows:

Particulars	For Year ended 31st March, 2022 ₹ crores	For Year ended 31st March, 2021 ₹ crores
Current service cost	0.64	0.80
Past Service Cost	-	-
Net interest expenses	0.55	0.57
Actuarial (Gain)/ Loss	0.22	0.11
Components of defined benefit costs recognized in profit or loss	**1.41**	**1.48**

ii. Remeasurement on the net defined benefit liability:

Particulars	For Year ended 31st March, 2022 ₹ crores	For Year ended 31st March, 2021 ₹ crores
Actuarial (gain)/Loss due to Defined Benefit Obligation Experience	0.01	(0.58)
Actuarial (gain)/Loss due to assumption Changes	(0.12)	(0.04)
Component of defined benefit costs recognized in Other Comprehensive Income	**(0.11)**	**(0.62)**

Note:

1) The current service cost and the net interest expense for the year are included in the 'Employee benefits expense ' in the Statement of Profit and Loss.

2) The remeasurement of the net defined benefit liability is included in the other comprehensive income.

iii. Reconciliation of Net Balance Sheet Position

Particulars	For Year ended 31st March, 2022 ₹ crores	For Year ended 31st March, 2021 ₹ crores
Opening Net defined benefit asset/ (liability)	**(8.63)**	**(9.13)**
Current service cost	(0.64)	(0.80)
Net interest on net defined benefit liability/ (asset)	(0.55)	(0.57)
Amount recognized in OCI	0.33	0.62
Actuarial Gains/ (Losses)	(0.22)	(0.11)
Benefit paid directly by the Company	0.74	0.64
Acquisitions credit/ (cost)	0.32	0.71
Closing Net defined benefit asset/ (liability)	**(8.65)**	**(8.63)**

iv. Sensitivity analysis

Particulars	31st March, 2022 ₹ crores		31st March, 2021 ₹ crores	
	Increase	Decrease	Increase	Decrease
Discount Rate (-/+0.5%)	(0.48)	0.54	(0.50)	0.55
Salary Growth Rate (+/-0.5%)	0.31	(0.28)	0.33	(0.31)
Withdrawal Rate (-/+ 5%)	(1.96)	-	(1.91)	-
Gold Inflation Rate (+/- 5%)	0.07	(0.06)	0.07	(0.06)
Medical Inflation Rate (+/- 5%)	0.14	(0.12)	0.13	(0.11)
Mortality Rate (+/- 5%)	0.05	(0.04)	0.05	(0.05)

vi. The expected maturity analysis of defined benefit obligations

Time Period	31st March, 2022 ₹ crores	31st March, 2021 ₹ crores
Within 1 year	0.50	0.37
Between 1-2 years	0.51	0.40
Between 2-3 years	0.37	0.73
Between 3-4 years	0.75	0.54
Between 4-5 years	1.08	0.79
Beyond 5 years	4.07	4.16

Particulars	31st March, 2022	31st March, 2021
The weighted average duration of the Post Retirement Medical Benefit represents average duration for active members	17 years	17.20 years

23. Deferred Tax Assets / Liabilities (Net)

Accounting Policy

Deferred Tax

Deferred tax is recognised on temporary differences between the carrying amounts of assets and liabilities in the financial statements and the corresponding tax bases used in the computation of taxable profit. Deferred tax liabilities are generally recognised for all taxable temporary differences. Deferred tax assets are generally recognised for all deductible temporary differences to the extent that it is probable that taxable profits will be available against which those deductible temporary differences can be utilised. Such deferred tax assets and liabilities are not recognised if the temporary difference arises from the initial recognition of assets and liabilities in a transaction that affects neither the taxable profit nor the accounting profit.

The carrying amount of deferred tax assets is reviewed at each reporting date and reduced to the extent that it is no longer probable that sufficient taxable profit will be available to allow all or part of the deferred tax asset to be utilised. Unrecognised deferred tax assets are re-assessed at each reporting date and are recognised to the extent that it has become probable that future taxable profits will allow the deferred tax asset to be recovered.

Deferred tax liabilities and assets are measured at the tax rates that are expected to apply in the period in which the liability is settled or the asset realised, based on tax rates (and tax laws) that have been enacted or substantively enacted by the end of the reporting period.

For operations carried out under tax holiday period (80IA benefits of Income Tax Act, 1961), deferred tax assets or liabilities, if any, have been established for the tax consequences of those temporary differences between the carrying values of assets and liabilities and their respective tax bases that reverse after the tax holiday ends.

Deferred tax relating to items recognised outside profit or loss is recognised outside profit or loss (either in other comprehensive income or in equity). Deferred tax items are recognised in correlation to the underlying transaction either in OCI or directly in equity.

Deferred tax assets and liabilities are offset when they relate to income taxes levied by the same taxation authority and the relevant entity intends to settle its current tax assets and liabilities on a net basis.

Deferred tax assets include Minimum Alternative Tax (MAT) paid in accordance with the tax laws in India, which is likely to give future economic benefits in the form of availability of set off against future income tax liability. Accordingly, MAT is recognised as deferred tax asset in the balance sheet when the asset can be measured reliably and it is probable that the future economic benefit associated with the asset will be realised. The Company reviews the "MAT credit entitlement" asset at each reporting date and writes down the asset to the extent that it is no longer probable that it will pay normal tax during the specified period.

In the situations where one or more units of the Company are entitled to a tax holiday under the tax law, no deferred tax (asset or liability) is recognized in respect of temporary differences which reverse during the tax holiday period, to the extent the concerned unit's gross total income is subject to the deduction during the tax holiday period. Deferred tax in respect of temporary differences which reverse after the tax holiday period is recognized in the year in which the temporary differences originate. However, the Company restricts recognition of deferred tax assets to the extent it is probable that sufficient future taxable income will be available against which such deferred tax assets can be realized. For recognition of deferred taxes, the temporary differences which originate first are considered to reverse first.

Deferred tax assets are recognised for unused tax losses to the extent that it is probable that taxable profit will be available against which the losses can be utilised. Significant management judgement is required to determine the amount of deferred tax assets that can be recognised, based upon the likely timing and the level of future taxable profits together with future tax planning strategies.

MAT Credit Entitlement

Minimum alternate tax (MAT) paid in a year is charged to the statement of profit and loss as current tax for the year. The deferred tax asset is recognised for MAT credit available only to the extent that it is probable that the Company will pay normal income tax during the specified period, i.e., the period for which MAT credit is allowed to be carried forward. In the year in which the Company recognizes MAT credit as an asset, it is created by way of credit to the statement of profit and loss and shown as part of deferred tax asset. The Company reviews the "MAT credit entitlement" asset at each reporting date.

S R Batliboi & Co. LLP Kolkata

MAITHON POWER LIMITED

Note:

a. Deferred tax assets and liabilities are being offset as they relate to taxes on income levied by the same governing taxation laws.

b. The Company is entitled for availing the tax benefit under section 80IA of the Income-tax Act, 1961, with effect from the financial year 2016-17 for 10 years. Deferred tax liabilities as at 31 March, 2022, reflect the quantum of tax liabilities accrued upto the period end but payable after the expiry of the tax holiday period.

c. The Company has recognised MAT credit entitlement of ₹ 463.23 crores as at March 31, 2022 (as at March 31, 2021: ₹ 418.68 crores). Basis the existing tax laws and the projections of future profitability considering definitive Power purchase agreements which are completely tied up with the plant capacity, the management is confident of earning taxable profits each year and will be able to utilise the entire amount of MAT credit entitlement recognised in the financial Statement.

27. Revenue from Operations
Accounting Policy

Revenue recognition
Revenue from contracts with customers is recognised when control of the goods or services are transferred to the customer at an amount that reflects the consideration to which the Company expects to be entitled in exchange for those goods or services.

Description of performance obligations are as follows :

Sale of Power - Generation (Thermal)
Revenue from sale of power is recognised net of cash discount over time for each unit of electricity delivered.

Contract price determined as per tariff regulations
The Company as per the prevalent tariff regulations is required to recover its Annual Revenue Requirement ('ARR') comprising of expenditure on account of fuel cost, operations and maintenance expenses, financing costs, taxes and assured return on regulator approved equity with additional incentive for operational efficiencies. Accordingly, rate per unit is determined using input method based on the Company's efforts to the satisfaction of a performance obligation to deliver power. As per tariff regulations, the Company determines ARR and any surplus/shortfall in recovery of the same is accounted as revenue.

Late Payment Surcharge
Late payment surcharge leviable as per the relevant contracts are recognised on actual realisation or accrued based on an assessment of certainty of realization supported by either an acknowledgement from customers or on receipt of favourable order from regulator / authorities.

No Late Payment Surcharge ('LPS') is charged for the initial 45 days from the date of receipt of invoice by customer. Thereafter, LPS is charged at the rate prescribed by the Power Purchase Agreement on the outstanding balance once the dues are received. Revenue in respect of late payment surcharge leviable as per the relevant contracts are recognised on actual realisation or accrued based on an assessment of certainty of realization supported by either an acknowledgement from customers or on receipt of favourable order from regulatory authorities.

Dividend and interest income

Dividend income from investments is recognized when the shareholder's right to receive payment has been established.

Interest income from a financial asset is recognized when it is probable that the economic benefits will flow to the Company and the amount of income can be measured reliably. Interest income is accrued on a time basis, by reference to the principal outstanding and at the effective interest rate applicable, which is the rate that exactly discounts estimated future cash receipts through the expected life of the financial asset to that asset's net carrying amount on initial recognition.

Note:-

The tariff to be charged from Long Term beneficiaries is determined by the Central Electricity Regulatory Commission (CERC) in accordance with the tariff regulations/norms notified by CERC. The tariff consists of two parts namely, capacity charge (for recovery of fixed cost based on plant availability) and energy charges (for recovery of fuel costs). The Company has received True-up order for the control period 2014-19 and also the Tariff order for the control period 2019-24, issued by Central Electricity Regulatory Commission on 8th January, 2022, the effect of which has been considered in these financial statements. Consequently, the company has recognised incremental revenue and charge for the control periods 2014-19 and 2019-24 respectively in accordance with these orders. Further, the tariff order for 2019-24 has considered a significant cost element divergent from the basis followed so far and also the true-up order for 2014-19, for which the company has filed review petition with the relevant appellate authority, and has recognised revenue as per the tariff order, on a conservative basis. Further adjustments could arise upon disposal of company's review petition.
