Schedule F
METHODOLOGY FOR CALCULATION OF ECR FOR BLENDING WITH ALTERNATE
SOURCES

Methodology for calculation of compensation due to blending of Imported coal or coal arranged by
Supplier from alternate sources due to shortfall in linkage coal

The SHR and Auxiliary Consumption for calculations shall be as considered by CERC for similar projects whose tariff is being determined under section 62 of the Act for relevant unit capacity and configuration.

Methodology for calculating compensation

Step-1: ECR linkage Coal(Delivery point)= ECR Quoted

Step -2: ECR imported Coal/arranged from other sources (Delivery point)= {[GSHR/GCV of imported /other Coal]x[Price of Imported/other Coal]x[1/(1-AuxConsumption)]x[1/(1-Applicable Transmission losses)]}

Step-3: ECR Chargeable(Delivery point)={GXECR at Step-1)+[ECR computed at Step-2x(1-G)]}

Step-4: Compensation={ (ECR as computed at Step-3 minus ECR at Step-1) x Scheduled Generation at Delivery Point}.

Where,

G= %Generation achieved based on Actual linkage Coal received;

GSHR = Normative Gross Station Heat Rate for similar generating units as per applicable CERC Regulations under Section 62 of the Act;

Aux Consumption= Normative auxiliary consumption for similar generating units as per applicable CERC Regulations under Section 62 of the Act;

Note:

a) If the actual generation at delivery point is less than scheduled generation at delivery point, it will be restricted to actual generation at delivery point in step 4 above.

b) All facts, figures and computations in this regard should be duly certified by the auditor.

c) The coal consumed from all the sources on month to month shall be duly certified by the auditor and the same shall be reconciled annually with the Opening Stock, coal received during the year, coal consumed during the year and the closing stock.

d) Total Generation Ex-bus and Scheduled Generation Ex-bus on month to month basis as per the meters at the station switchyard bus shall be reconciled with the relevant/SCADA data of SLDC/RLDC and/or Regional Energy Accounting of RPC/RLDC for the month.

2. There are some plants which are supplying electricity under Section 62 as well as 63 of the Act. In such cases the percentage of blending will be assumed to be same for PPAs under Section 62 and 63 of the Act.

3. The recovery of fixed charge shall continue to remain on the same basis as provided in the PPA.

Notwithstanding anything written above, it is clarified that the compensation as per Schedule F is applicable only in case of supplier/Bidder/Developer who has fulfilled condition precedent 4.1.3 (e) and submit the copy of FSA to Tata Power-D.

Further, it is to be clarified that supplier/Developer/Bidder who have submitted only undertaking for fuel arrangement as per Annexure A of RFQ shall not be eligible to claim compensation as per Schedule F of APP and clause No 11.5.3.

SCHEDULE –G

G. METHODOLOGY FOR CALCULATION OF RAMP RATE PENALTY

Penalty calculation methodology for Ramp rates < 1%/minute

Td - The number of blocks in which both declared ramp up rate and declared ramp down rate are 1%/minute or greater (i.e. 15% of ex-bus generation corresponding to MCR per time block) shall be counted as “Td”

Tm - The total number of time blocks in the period of computation shall be counted as “Tm”. The blocks in which no units are on-bar (i.e zero DC on-bar) and the blocks in which the schedule is less than technical minimum (i.e. start-up or shutdown) shall not form part of “Td” and “Tm”.

D - Number of time blocks during the computation period when the scheduled ramp rate is greater than or equal to 1%/min in the net injection schedule.

F - Number of blocks in which the station has achieved ramp rate greater than or equal to 1%/min, out of the blocks in which the scheduled ramp rate is greater than or equal to 1%/min in the net injection schedule. F is a subset of D.

$R = \text{minimum of } (T_d/T_m, F/D) \text{ For}$

$R \geq 0.9, P=0$

For $0.75 < R < 0.9, P = 6.003 - 6.67R$ &

for $R \leq 0.75, P=1$

Where P is the fraction to be multiplied to annual fixed charges to get penalty for ramp rate as specified in 11.6.1
